## Executive Summary

|                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Appointment                             | <p>In March 2021 Curtins were instructed by One Manchester to undertake a Phase 1 Preliminary Risk Assessment of a plot of land located off Canberra Street, Manchester M11 4WL. The site is centred on NGR 388310, 398500 and covers an area of approximately 0.07 Ha.</p> <p>It is understood that the development proposals comprise the construction of low-rise residential housing.</p>                                                                                                                                                                            |
| Current Site Status                     | <p>The site is located east of and accessed off Canberra Street.</p> <p>The site is currently occupied by public open space, with grass surface cover with a number of shrubs and trees located within the northern half. The site is generally flat with no discernible sloping.</p>                                                                                                                                                                                                                                                                                    |
| Site History                            | <p>Earliest mapping (1848) shows that the site was part of vacant agricultural land until the early 1900s where it was made part of a wider low-rise residential development.</p> <p>The site remained in its general configuration up until the 1990s when all structures were demolished and converted to public open space, as it remains to the current day.</p> <p>Throughout the site's history, its local surroundings are generally occupied by residential properties with limited contaminative potential.</p>                                                 |
| Geology                                 | <p>BGS mapping indicates the site is underlain by Glacial Till Deposits, Devensian superficial deposits and Manchester Marls Formation bedrock. The BGS records from a borehole 300m south-west of the site, encountered granular deposits to 15.00 metres below ground level, underlain by cohesive deposits to 26.00m bgl. This was in turn underlain by bedrock of the Manchester Marls Formation.</p> <p>The site is located in a low probability radon area where &lt;1% of homes are estimated to be at or above the radon Action Level.</p>                       |
| Mining                                  | <p>The site is located within a Coal Mining reporting area. A review of available online data indicates the site is not located within the vicinity of recorded mine entries, or a development high risk area.</p> <p>The risk from shallow coal mining is therefore considered to be <b>Low</b>.</p>                                                                                                                                                                                                                                                                    |
| Hydrogeology                            | <p>The site is underlain by a Secondary A Aquifer associated with the bedrock formation. The superficial deposits are designated as a Secondary B Aquifer. The site is not located within a Source Protection Zone (SPZ). There are no potable groundwater abstraction points within 500m.</p>                                                                                                                                                                                                                                                                           |
| Hydrology                               | <p>The nearest surface water feature is 129m to the west, indicated as a water feature associated with Clayton Hall. There are no surface water abstractions within 500m.</p> <p>On discharge consent is noted within 500m of the site. This is located 193m to the south and is noted as being operated by United Utilities Water Ltd for the discharge of storm sewage overflow to an unnamed watercourse.</p>                                                                                                                                                         |
| Unexploded Ordnance                     | <p>The risk from UXO associated with WWII bombing to construction workers is considered to be <b>Low</b>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Initial Ground Contamination Assessment | <p>The risk from Made Ground posed to the site's end-users and groundwater is considered to be <b>Moderate / Low</b> due to the anticipated lack of contamination in the Made Ground. The risk posed to groundwater and surface water is considered to be <b>Low</b> due to the lack of contaminative activities on site and the distance to the nearest surface water feature. The risk posed to site end-users from ground generating gases arising from organic / putrescible soils near the site is considered to be <b>Moderate</b>.</p>                            |
| Recommendations                         | <p>The following recommendations are made with regards to further works at the site:</p> <ol style="list-style-type: none"><li>1. Undertake a GQRA as part of the ground investigation; and</li><li>2. Undertake Ground Gas Monitoring over a period of two-three months for methane, carbon dioxide, oxygen, hydrogen sulphide, gas flow in l/hr, weather conditions and barometric pressure (with confirmation if falling, steady or rising).</li></ol> <p>It is further recommended that this work is completed in advance of any development works taking place.</p> |

## 1.0 Introduction

### 1.1 Project Background

In March 2021 Curtins were instructed by One Manchester Housing to undertake a Phase 1 Preliminary Risk Assessment of a currently vacant land off Canberra Street, Manchester, M11 4WL.

The location and extent of the site is shown in *Figure 2.1* on the following page. It is understood that the site is to be developed for residential dwellings.

At the time of writing, no proposed site plans were available for review.

### 1.2 Scope of Services

The Phase 1 PRA is intended to provide an overview of the geo-environmental and geotechnical setting of the site, prior to the proposed development of the site.

Through this overview, the Phase 1 PRA aims to develop both a working conceptual and ground model for the site, as well as present an initial assessment of any risks that could be presented to the development including its intended end users and the wider environment.

Specifically, the Phase 1 PRA provides an initial assessment of the site regarding:

- a) Potential on and offsite contamination from historical and/or current uses, including potential ground gas generating sources;
- b) The potential impact on the wider environment by historical and or current use of the site of interest;
- c) The potential impact from surrounding land uses and other environmental factors;
- d) Potential problems associated with geological features such as faulting, mineral extraction, mining and land instability; and
- e) The location of apparent sub-surface structures that may affect the proposed redevelopment.

Consideration of detailed flood risk, ecology and archaeological issues are outside of the scope of this report.

## 2.0 Current Site and Surrounding Area Details

### 2.1 Site Location and Current Details

Site use, location and description are shown below in *Table 2.1* and *Figure 2.1*.

**Table 2.1** – Site Details

|                                  |                                                                                                                                                                                                                                                                                       |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Site Address                     | Canberra Street, Manchester M11 4WL                                                                                                                                                                                                                                                   |
| NGR                              | 388310, 398500                                                                                                                                                                                                                                                                        |
| Area of Site                     | Approximately 0.07 Ha.                                                                                                                                                                                                                                                                |
| Current Site Use and Description | <p>The site is located east of and accessed off Canberra Street.</p> <p>The site is currently occupied by public open space, with grass surface cover with a number of shrubs and tress located within the northern half. The site is generally flat with no discernible sloping.</p> |

## 2.2 Surrounding Area Details

The following information was established through undertaking an environmental database search. The full Envirocheck report (Ref. 1) is included in *Appendix B*.

**Table 2.2 – Surrounding Land Uses**

| Surrounding Area | N | Kingsbury Road followed by predominantly residential development.    |
|------------------|---|----------------------------------------------------------------------|
|                  | E | Residential properties.                                              |
|                  | W | Canberra Street followed by predominantly residential development.   |
|                  | S | Coatbridge Street followed by predominantly residential development. |

### 3.0 Site History

A review of the available historical mapping and other information for the site, as presented within the Envirocheck Report (Ref. 1), has been undertaken and is presented in *Table 3.0* below.

**Table 3.0 – Previous Site and Surrounding Area Uses and Potential Sources of Contamination. *Bold text refers to on-site activity.***

| Date                 | Description                                                                                                                                                                                                                                                                                                                                                     | Potential Sources of Contamination                                                                                                   |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| 1848                 | <b>The earliest available mapping (1848) shows the site is occupied by vacant agricultural land.</b><br>Surrounding land uses comprise mostly agricultural land, with Clayton Hall approximately 100m to the west and the Clayton Tavern noted 100m to the south. A sand pit is noted approximately 50m to the south-west of the site boundary.                 | N/A                                                                                                                                  |
| 1893                 | <b>No major changes on-site with it noting to now be part of the Clayton Hall Farm.</b><br>Sporadic residential development has been undertaken to the south, north and west of the site. The old sand pit to the east appears to have been extended, however is now noted as disused.<br>Clayton chemical works is noted approximately 300m to the south-west. | N/A                                                                                                                                  |
| 1908                 | <b>The site is now occupied by residential properties, as part of a wider residential development.</b><br>A brick-works is noted approximately 100m to the north-east of the site, within the extents of the former sand pit. An additional chemical works is also noted approximately 200m to the south.                                                       | <ul style="list-style-type: none"><li>• Potential for deposition of Made Ground from construction activities on-site.</li></ul>      |
| 1932 - 1933          | <b>No significant changes.</b><br>The brickworks to the north-east is no longer mapped, with the former brick works and sand pit no longer labelled suggesting infilling.<br>The chemical works to the south and south-west are also no longer mapped and have been replaced with extensive residential developments.                                           | <ul style="list-style-type: none"><li>• Potential for ground gas migration from infilled materials of former sand pit.</li></ul>     |
| 1947 - 1951          | <b>No significant changes.</b><br>Vacant land to the adjacent east and within area of former brick works has undergone residential development.                                                                                                                                                                                                                 | N/A                                                                                                                                  |
| 1990s – present day. | <b>Residential properties on-site are no longer mapped, with the site indicated as public open space in its current form.</b>                                                                                                                                                                                                                                   | <ul style="list-style-type: none"><li>• Potential for deposition of Made Ground from demolition of residential properties.</li></ul> |

Potential sources of onsite contamination are further discussed in Section 6.0

## 4.0 Geology, Hydrogeology and Hydrology

### 4.1 Geology and Hydrogeology

A study of the Envirocheck (Ref. 1) Report and the British Geological Survey (BGS) 1:50,000 mapping records (Bedrock and Superficial Editions) for Manchester (Sheet 085) dated 2010 (Ref. 2) indicates the following geological and hydrogeological succession underlying the site:

**Table 4.1 – Geological/Hydrogeological Succession**

| Geology                                            | Associated Hydrogeological Classification |
|----------------------------------------------------|-------------------------------------------|
| Glacial Till – Devensian, Diamicton <sup>1</sup>   | Secondary B Aquifer <sup>2</sup>          |
| Manchester Marls Formation – Mudstone <sup>3</sup> | Secondary A Aquifer <sup>4</sup>          |

Notes:

- 1. A heterogeneous mixture of clay, sand, gravel, and boulders varying widely in size and shape.
- 2. These are mainly lower permeability layers that store and yield limited amounts of groundwater through characteristics like thin cracks (fissures) and openings or eroded layers.
- 3. Red marl (calcareous mudstone and siltstone) with thin beds of fossiliferous marine limestone and dolomite; locally green; sandy in places especially in top part; locally breccias and pebbly beds.
- 4. Comprise permeable layers that can support local water supplies and may form an important source of base flow to rivers.

BGS Records do not indicate the presence of Made Ground on site, however the site’s historic land use, primarily as residential dwellings, and demolished in the 1990s, suggests that Made Ground soils may be present beneath the site.

The nearest publicly available BGS recorded borehole is located approximately 300m south-west of the site (Ref. 3). This is summarised in Table 4.2 below:

**Table 4.2 – BGS Borehole Records**

| Record Reference | Location (NGR)                   | Details (bottom to top of strata/details/thickness of strata) |
|------------------|----------------------------------|---------------------------------------------------------------|
| SJ89NE206        | 300m south-west (388030, 398290) | 0.00m to 1.00m bgl                                            |
|                  |                                  | 1.00m to 16.00m bgl                                           |
|                  |                                  | 16.00m to 26.00m bgl                                          |
|                  |                                  | 26.00m to 34.00m bgl                                          |
|                  |                                  | 34.00m to 38.00m bgl                                          |
|                  |                                  | Fill (1.00m)                                                  |
|                  |                                  | Grey Sand (15.00m)                                            |
|                  |                                  | Red Clay (10.00m)                                             |
|                  |                                  | Red Marl (8.00m)                                              |
|                  |                                  | Red Sandstone (4.00m)                                         |

There are no BGS recorded fault lines within 250m of the site.

The site is not situated within a Source Protection Zone (SPZ). There are no groundwater abstraction points within 250m of the site.

#### 4.1.1 Mining

A review of the Coal Authority interactive mapping (Ref. 4) for the area indicates that the site is located within a Coal Mining Reporting Area, however it is not located within a Development

There are no recorded mine entries within the site or within 200m of the site boundary.

Consequently, the risk to development from historic coal mining is considered to be **Low**. No further actions are required to further assess the risk to development from historic coal mining.

There are no recorded BGS mineral sites located within 300m of the site.

#### **4.1.2 Other Ground Stability Issues**

The Envirocheck Report (Ref. 1) confirms that there is a no hazard to very low risk from the following ground stability hazards on the site; collapsible ground, compressible ground, ground dissolution, landslide ground, running sands and shrinking or swelling clay.

#### **4.1.3 Ground Gas**

Given historic development on site, primarily for residential use, it is possible that Made Ground soils may be present on site. These soils may act as a source of ground gas generation.

There are no current or historical landfills located within 250m of the site.

The nearest area of infilled land (non-water) is located 44m to the south-east which is noted as unknown filled ground (pit, quarry etc).

The Envirocheck Report (Ref. 1) and BGS Radon Mapping (Ref. 5) confirms the site is situated in an area where <1% of homes are above the radon action level. Radon protection measures are therefore not considered necessary within the proposed development. However, where the new development incorporates a basement the advice of a specialist Radon assessor must be obtained.

## **4.2 Hydrology**

The nearest surface water feature is located 129m to the west of the site indicated as a water feature associated with Clayton Hall.

No pollution incidents to controlled waters have been recorded within 500m of the site.

There are no surface water abstractions within 500m.

On discharge consent is noted within 500m of the site. This is located 193m to the south and is noted as being operated by United Utilities Water Ltd for the discharge of storm sewage overflow to an unnamed watercourse.

## 5.0 Unexploded Ordnance Risk Assessment

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

The likelihood of UXO being encountered on a development site is influenced by several factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. To determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry (Ref. 6) with the following commentary considered to represent a Preliminary Risk Assessment intended to guide if and where there is a requirement for a Detailed Risk Assessment.

### 5.1 Preliminary UXO Assessment

Risk mapping (Ref. 7) for UXO's has placed the site in a **Moderate** risk area. Moderate-risk regions are those with a bombing density between 11 and 49 bombs per 1000 acres. These areas are considered to have a significant but low UXB risk. In general, further action to mitigate the risk is considered prudent, although not essential. Care is required when assessing the risk for specific sites where the risk may be higher because of local wartime activity.

A review of the available historic mapping did not identify any evidence of bomb damage onsite or within close proximity of the site boundary. No ruins were recorded in the immediate vicinity of the development site, and no buildings appear to have been demolished following WWII on or surrounding the site. Detailed bomb strike mapping does not record any strikes or damage on the site (Ref. 4).

Considering the above, the risk of encountering potential UXO as part of future intrusive works is considered **Low**.

If unexploded ordnance is discovered during any works, stop immediately, prevent access to the area, and inform the police. If the site boundary or location changes then the UXO risk should be reassessed.

## 6.0 Conceptual Site Model & Qualitative Risk Assessment

The conceptual site model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table within this section.

The CSM details the source-pathway-receptor linkages or potential pollutant linkages (PPL) that have been identified for the site. The QRA details the associated level of risk relating to these potential pollutant linkages.

The CSM and QRA concern risk to human health and water environment with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in *Section 6.1* below.

The QRA follows the framework outlined within CIRIA C552 (Ref. 8) which is summarised within *Appendix C*.

The ‘risk rating’ within the QRA refers to the risk that the source, pathway, receptor linkage or PPL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

### 6.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but nonetheless can be of critical importance to the onward development of the site:

- The risk presented by Mining is discussed and assessed in *Section 4.1.1*.
- The risk presented by Radon is discussed and assessed in *Section 4.1.3*.
- The risk presented by Unexploded Ordnance is discussed and assessed in *Section 5.0*.

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations, 2015 (Ref. 9) which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works on site will be undertaken in compliance with these requirements.

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- For a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e. low to very low risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.
- In the absence of specific site data, a Generic Quantitative Risk Assessment is invariably recommended.

| Conceptual Site Model                                                                                                                                                                                                                               |                                                                                                                                                                                                                                 |                                                                                                                                                                                                                    | Qualitative Risk Assessment                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                       | Recommended Actions                                                                                 |

## 7.0 Conclusion and Recommendations

The qualitative risk assessment (QRA) determined a varied level of risk associated with the proposed development.

The QRA concluded by recommending that generic quantitative risk assessments (GQRA) were conducted to confirm the assessment of risk ascribed to each of the respective potential pollutant linkages (PPLs). It is recommended that the GQRA is conducted as part of a ground investigation in support of the engineering design of the proposed development.

In summary, the following recommendations are made:

- Undertake a GQRA as part of the ground investigation; and
- Undertake ground gas monitoring over a period of two-three months for potential hazardous gases.

It is further recommended that the site investigation works are completed in advance of any development works taking place.

### 7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Conceptual Site Model in *Section 6.0* of this reporting include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); inorganic compounds including heavy metals; and asbestos present in discarded building materials.

Potential contaminants associated with the airborne dust/particulates include but are not limited to: polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential onsite contaminants of concern.

### 7.2 Other Considerations

The requirement for additional surveys, e.g. arboricultural and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Please note that the Environment Agency / Natural Resources Wales / SEPA have a charging policy in place for enquiries.

## Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

### Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

### Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

### Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

## Client Details

Ms S Hyde, Curtins Consulting Ltd, Merchant Exchange,  
17-19 Whitworth Street West, Manchester, M1 5WG

## Order Details

Order Number: 273939042\_1\_1  
Customer Ref: EBMA2711  
National Grid Reference: 388310, 398500  
Site Area (Ha): 0.07  
Search Buffer (m): 1000

## Site Details

28, Canberra Street, Manchester, M11 4NL
