Comment Details

Commenter Type: Member of the Public

Stance: Customer made comments neither objecting to or supporting the Planning Application

Comment Reasons:

Comment: More consideration should be given to photovoltaic cells given the surface area and electricity use of the building. Consideration should be given to ground source heating given the higher coefficient of performance over air source heat pumps. More than two electric vehicle charging points should be provided, given increasing adoption of electric vehicles and the difficulty of many local residents to charge at home, given they lack off street parking.
