Dear Adam Mitchell,
CC Cllr Andrew Simcock

As a resident of the house on the corner of Fog Lane and Cranmer Road (13 Fog Lane) - I hereby lodge my objection to the proposed erection of a 5G mast right outside our house. Based on the plans and elevations published the mast will be situated on the boundary wall of our next door neighbour's property at 15 Fog Lane, M20 6AY. We note that in the application the location is wrongly listed as M20 6AW which is a location at the other end of Cranmer Road.

The mast will **tower over our houses** - (double the height!) and make a huge impact on us, our immediate neighbours and the whole surrounding area.

We object to the plan to locate a mast **within 1m of a residential boundary wall** and **only 4m to the actual house** - when in other nearby locations the masts are much further from houses. (Fog Lane / Kingsway for example) Surely there are other locations which would be less intrusive on houses - for example supermarket car parks?

The end of our road already has some telecoms boxes - frequently visited by multiple service vans - and they are also a target for graffiti, teenage hang-outs, alcohol bottles and litter. The mast would make it much worse. There are many young families with children living in the immediate vicinity - 10 or so houses on Cranmer Road and most surrounding houses on Fog Lane too.

I am also concerned about the **stability of the mast** - our house already **shakes and rattles every time as lorry or bus goes past** - due to the speed bumps. The vibrations would surely impact the mast and potentially damage our neighbourhood's foundations.

As a working mother of a 4 year old and with one more on the way, I have not had time to read all 198 pages of the document explaining potential health risks posed by 5G masts - but on reading the conclusions I am very concerned about the possibility of a link with **brain tumours** and **reduced fertility** in the studies they mention.

Yours sincerely,
Rosy Williams
Homeowner of 13 Fog Lane Didsbury, M20 6AX
