

Rodney Street, Ancoats – Verification Plan – Ref: VP-22434-22-340

A simple tracking system (see attached tracking form) has been devised for the re-use of materials. The majority of site won material has been suitable for use (with the exception of hotspots identified in the RMS, or material considered geotechnically unsuitable), which can be identified from the previous contaminated land assessments. Suitability will be confirmed by visual inspection and or testing if deemed necessary

. The following information will be recorded:

- Date of inspection
- Field description of material
- Volume of material
- Reference area
- Waste material off site
- Chemical analysis if undertaken on unforeseen contamination

The receiving site areas will be divided on a grid basis and the following information recorded:

- Depth of placement in receiving location
- Location of placement in the receiving location
