

BIONOMIC™

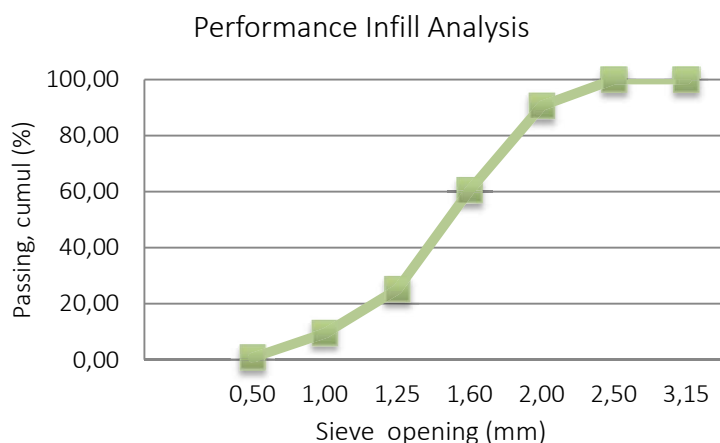

A natural artificial turf Infill

Bionomic™ is an ecological turf infill composed of 100% high quality cork granules derived from the bark of the cork oak. It is a completely natural raw material with unique properties: light, impermeable to liquids and gases, elastic and compressible and highly abrasion-resistant. Furthermore, it is biodegradable, renewable and recyclable.

Bionomic™ is the only solid which, when compressed on one side, does not increase in volume on another. As a result of its elastic memory, it is able to adapt to variations in temperature and pressure without suffering alterations. Bionomics™'s resistance to moisture enables it to age without deteriorating.

- GRANULOMETRY 0,8 - 2,5 mm
- SHAPE Angular
- BULK DENSITY ca. 135 kg/m³

BIONOMIC™ Size analysis (ISO 2030)

Sieve opening (mm)	Cumul. through Sieve (%)
3,15	100,00
2,50	100,00
2,00	90,60
1,60	60,40
1,25	25,20
1,00	9,50
0,50	0,80

PACKAGING

Bulk bags

Dimension L 1,1m □ W 1,1m □ H 2,5m
Weight ± 425 kg
