Re: Crossley Street, Gorton Interim Soil Validation Letter Report –Validation of Plots 1-2 and 29-37

Dear Sheamus,

Introduction:

Met Engineers have been contracted by Meares Group Plc to carry out the soil validation works at the above site. The scope of works is based on the phase II site investigation report (ref. 069912-CUR-00-XX-RP-GE-001) by Curtins Consulting Limited dated 17th December 2018, and the subsequent phase III remediation statement (ref. P20-00073-Met-RP-GE-001) by Met Engineers dated 18th February 2022 (Revision 2) to satisfy Manchester City Council planning reference: 122797/FO/2019 as amended by 129169/NMC/2021.

The initial intrusive investigation recorded elevated levels of lead, PAH and TPH. Asbestos fibres (<0.001%) were also identified in 1№ of the soil samples tested.

3№ gas monitoring visits were initially undertaken by Curtins Consulting Limited and this confirmed Characteristic Situation (CS) 1 conditions with no gas protection measures proposed. A supplementary gas risk assessment was carried out by Curtins Consulting Limited (ref: 069912-CUR-00-XX-CO-GE-00002-V01_Fee Proposal) in a letter dated 22nd April 2020 which confirmed the gas classification of CS1.

It is understood that the EHO previously raised queries regarding TPH concentrations in TP08 and TP10. In email correspondence provided to Met Engineers Ltd on 29th October 2021, dated between 27th March to 7th April 2020, between Curtins Consulting Limited and Mears Group Plc it was confirmed that the removal of 600mm surface material would effectively remove the contaminated material recorded in TP08 and TP10. It was also confirmed that levels recorded within TP10 do not exceed the relevant guideline values.

In correspondence dated 6th March 2020, the local planning authority stated that due to the above TPH exceedances, a capillary break layer may be required within the cover system.

The client has retained copies of all email correspondence related to the project which can be provided as an addition to this letter report upon request.

Summary of Proposed Remediation:

Based on the findings of the phase II site investigation report, it was proposed to install 600mm of clean capping material as detailed within the Met phase III remediation statement dated 3rd March 2020. Based on the site investigation logs, it was considered likely that the site strip would remove all made ground material from the central area of the site where <0.001% asbestos fibres were previously identified in 1№ sample. It was initially proposed to carry out additional sampling around this location following the removal of all made ground to confirm no asbestos fibres remained in this area. During the first validation visit carried out by Met Engineers Ltd on 27th October 2021, it was confirmed that nominal amounts of made ground remained at the surface in this area, therefore the supplementary sampling was not carried out. Instead, it was confirmed a high-visibility membrane should be installed as a marker layer around the previous WS03 where made ground remains.

At this time, it was also recommended that a high-visibility membrane should be installed in all remaining plots, excluding plots 1-13 and 18-23 which had already been completed at the time of the first validation visit. This was due to the potential for TPH associated with TP08 to remain in the surface soils immediately beneath the proposed 600mm capping layer. Validation of these areas has been carried out over a total of 5№ visits to the site, and this letter report provides the findings of the final visit.

Exported Material:

Based on reduced level dig photographs it is determined that sufficient material has been removed from the site within plots 1-2 and 29-37 to facilitate a capping of 600mm of topsoil overlying a high-visibility membrane. It should be noted that the front garden areas of plots 1 and 2 were completed prior to the first validation visit, therefore a high-visibility membrane has not been placed beneath the 600mm capping layer. Photographs of the site strip and placement of the membrane in these areas are provided in appendix VI.

It was previously understood that no additional material had been removed from the site subsequent to Met Engineers receiving tickets showing material removed as part of the initial site strip and enabling works. However, it is now understood that an additional 5,220 tonnes of material have been exported from site.

To date, a total of approximately 10,360 tonnes of material has been removed from the site; approximately 5,140 tonnes of this material is recorded as inert/non-hazardous material, 4,940 tonnes as spoil, 80 tonnes as stone, 80 tonnes as tarmac, 40 tonnes as soil and stone, 40 tonnes as sand, and 40 tonnes as contaminated spoil. The initial exported material tickets provided to Met Engineers, dated between 12.02.20 and 23.04.20, are included in appendix II of the letter report dated 6th December 2021. The additional tickets provided to Met Engineers, dated between 15.01.21 and 21.09.22, are included in appendix IV of this letter report. A summary of all the exported material tickets for the site is provided in appendix V of this report.

Imported Material:

It was proposed to import topsoil material supplied by Cheshire Soils and Aggregates Limited from a site in Halewood, Liverpool, L26 3UA. It is understood from Cheshire Soils and Aggregates Ltd that Halewood is a greenfield site. Confirmation is provided in the email contained within appendix III of a previous letter report dated 6th December 2021. Based on the requirements Yorkshire and Lincolnshire Pollution Advisory Group (YALPAG) Document – Verification Requirements for Cover Systems it is recommended that for a greenfield/manufactured source 1№ sample per 250m³, or 3№ samples be taken per source, whichever is greater. As such, prior to the material being imported to the site, Met Engineers attended Halewood on 20th September 2021 and collected 11№ samples of the topsoil material. Met Engineers attended Halewood again on 31th May 2022 and collected an additional 6№ samples of the topsoil material to cover additional imported material.

The samples were submitted for laboratory testing for heavy metals (CLEA 9), polycyclic aromatic hydrocarbons (PAH-USEPA 16), asbestos, and soil organic matter. The results were screened against Land Quality Management S4UL's for all contaminants except Lead, for which there is no S4UL available. Results for lead have been screened against DEFRA C4SL's. A conservative soil organic matter content of 1% has been assumed and the guideline values are based on a 'residential with homegrown produce' land use. No exceedances were identified within the topsoil sampled during either of the visits, and the material is therefore considered **suitable for use** at the Crossley Street, Gorton development.

The screened laboratory results and laboratory certificates for the initial testing at Halewood can be found in appendix IV and V of the letter report 6th December 2021 respectively. The screened results and certificated for the subsequent testing can be found in appendix VIII and IX of this letter report respectively.

Southgate House, Pontefract Road, Stourton, Leeds, LS10 1SW
Tel: + (0)113 200 8900 E: admin@metconsultancygroup.com
W: www.metconsultancygroup.com

Additional material has been imported to the site since the last letter report, amounting to 500m^3. The tickets are dated between 3rd August 2022 and 4th October 2022, and are included within appendix II of this report. Met Engineers have been supplied topsoil transfer tickets that show that a total of 3,300m^3 of this soil has been imported to date. This assumes a conversion of 1 tonne of soil per m^3 to provide a conservative frequency of testing for imported material. A summary of all imported tickets to date has been provided in appendix III of this letter report.

Summary of 5th Validation Visit – 22.09.22:

It was proposed to carry out the validation works at the above site over a number of visits. This letter report provides the results of the fifth and final visit, confirming the depth of topsoil placed in the garden areas of plots 1-2 and 29-37. The validation works for the whole site are shown on the plan provided in appendix I. This plan also shows the locations of the hand dug pits carried out to date.

The front and rear garden areas for plots 1-2 and 29-37 were validated by Met Engineers in the most recent validation visit undertaken on 22nd September 2022. A total of 3№ hand dug pits were undertaken during this visit; HDP23 was carried out in the front garden area of plot 31, HDP24 in the rear garden of plot 34, and HDP25 in the rear garden of plot 1. All hand dug pits concluded that a minimum of 600mm topsoil has been placed overlying a high-visibility membrane. It should be noted that the front garden areas of plots 1 and 2 were completed prior to the first validation visit, therefore a high-visibility membrane has not been placed beneath the 600mm capping layer.

It is understood that the high-visibility membrane has been placed in the rear garden areas of plots 1-2 and 14-17, the front garden areas of plots 18-23, and the front and rear garden areas of plots 24-45, and was on this occasion observed at the base of all 3№ hand dug pits.

Photographs of the hand dug pits are provided in appendix VII, and photographs of the completed garden areas are provided in appendix VIII.

I trust this is acceptable, however if you have any queries, please do not hesitate to contact me.

Yours sincerely,

Yasemin Kolsuz
Senior Geo-Environmental Engineer
For and on behalf of Met Consultancy Group

The following documents are appended to this letter:

- Appendix I - Validation Plan
- Appendix II - Imported Tickets (3rd August 2022 – 4th October 2022)
- Appendix III - Summary of Imported Tickets
- Appendix IV - Exported Tickets (15th January 2021 – 21st September 2022)
- Appendix V - Summary of Exported Tickets
- Appendix VI - Reduced Level Dig Photographs
- Appendix VII - Hand Dug Pit Photographs
- Appendix VIII - Photographs of Completed Garden Areas
- Appendix IX - Screened Topsoil Laboratory Testing Results
- Appendix X - Laboratory Certificates

Appendix I – Validation Plan

This drawing and the copyright in it are the property of Met Engineers Limited. It must not be ported from or copied in whole or in part or used as the basis for any other drawing or reproduced three dimensionally without the consent in writing from Met Engineers Limited and it must be returned to them on request.

1. Do not scale dimensions from this drawing in either paper or electronic format.
2. To be read in conjunction with all relevant Engineer's, Architect's and Other drawings and specifications.
3. All building products to be used in strict accordance with the manufacturer's recommendations.
4. Any discrepancies are to be reported to the Engineer immediately.
5. Main Contractor to provide a detailed method statement for all works prior to commencement on site.

Completed hand dug validation pit confirming the depth of topsoil placed meets the requirements for capping.

Sufficient Made Ground removed to leave soft landscaped areas 600mm below final levels. Levels made up with clean and certified* imported topsoil.

Garden areas in which a membrane has been installed overlain by 600mm of clean and certified imported topsoil.

Appendix VI – Reduced Level Dig Photographs

* It should be noted that the front garden areas of plots 1 and 2 were completed prior to the first validation visit, therefore a high-visibility membrane has not been placed beneath the 600mm capping layer.

Photograph 1: Reduced level dig within front gardens of plots 1 and 2*.

REPORT NOTES

General

This report shall not be reproduced, except in full, without written approval from Envirolab.
The results reported herein relate only to the material supplied to the laboratory.
The residue of any samples contained within this report, and any received with the same delivery, will be disposed of six weeks after initial scheduling. For samples tested for Asbestos we will retain a portion of the dried sample for a minimum of six months after the initial Asbestos testing is completed.
Analytical results reflect the quality of the sample at the time of analysis only.
Opinions and interpretations expressed are outside the scope of our accreditation.
If results are in italic font they are associated with an AQC failure, these are not accredited and are unreliable.
A deviating samples report is appended and will indicate if samples or tests have been found to be deviating. Any test results affected may not be an accurate record of the concentration at the time of sampling and, as a result, may be invalid.
The Client Sample No, Client Sample ID, Depth to Top, Depth to Bottom and Date Sampled were all provided by the client.

Soil chemical analysis:
All results are reported as dry weight (<40°C).
For samples with Matrix Codes 1 - 6 natural stones, brick and concrete fragments >10mm and any extraneous material (visible glass, metal or twigs) are removed and excluded from the sample prior to analysis and reported results corrected to a whole sample basis. This is reported as '% stones >10mm'.
For samples with Matrix Code 7 the whole sample is dried and crushed prior to analysis and this supersedes any “A” subscripts
All analysis is performed on the sample as received for soil samples which are positive for asbestos or the client has informed asbestos may be present and/or if they are from outside the European Union and this supersedes any "D" subscripts.

TPH analysis of water by method A-T-007:
Free and visible oils are excluded from the sample used for analysis so that the reported result represents the dissolved phase only.

Electrical Conductivity of water by Method A-T-037:
Results greater than 12900µS/cm @ 25°C / 11550µS/cm @ 20°C fall outside the calibration range and as such are unaccredited.

Asbestos:
Asbestos in soil analysis is performed on a dried aliquot of the submitted sample and cannot guarantee to identify asbestos if only present in small numbers as discrete fibres/fragments in the original sample.
Stones etc. are not removed from the sample prior to analysis.
Quantification of asbestos is a 3 stage process including visual identification, hand picking and weighing and fibre counting by sedimentation/phase contrast optical microscopy if required. If asbestos is identified as being present but is not in a form that is suitable for analysis by hand picking and weighing (normally if the asbestos is present as free fibres) quantification by sedimentation is performed. Where ACMs are found a percentage asbestos is assigned to each with reference to 'HSG264, Asbestos: The survey guide' and the calculated asbestos content is expressed as a percentage of the dried soil sample aliquot used.

Predominant Matrix Codes:
1 = SAND, 2 = LOAM, 3 = CLAY, 4 = LOAM/SAND, 5 = SAND/CLAY, 6 = CLAY/LOAM, 7 = OTHER, 8 = Asbestos bulk ID sample, 9 = INCINERATOR ASH.
Samples with Matrix Code 7 & 8 are not predominantly a SAND/LOAM/CLAY mix and are not covered by our BSEN 17025 or MCERTS accreditations, with the exception of bulk asbestos which are BSEN 17025 accredited.
Secondary Matrix Codes:
A = contains stones, B = contains construction rubble, C = contains visible hydrocarbons, D = contains glass/metal, E = contains roots/twigs.

Key:
IS indicates Insufficient Sample for analysis.
US indicates Unsuitable Sample for analysis.
NDP indicates No Determination Possible.
NAD indicates No Asbestos Detected.
N/A indicates Not Applicable.
Superscript # indicates method accredited to ISO 17025.
Superscript "M" indicates method accredited to MCERTS.
Subscript "A" indicates analysis performed on the sample as received.
Subscript "D" indicates analysis performed on the dried sample, crushed to pass a 2mm sieve
EPH CWG results have humics mathematically subtracted through instrument calculation
TPH results "with Cleanup" indicates results cleaned up with Silica during extraction

EPH CWG GCxGC ID from TPH CWG

Where we have identified humic substances in any ID's from TPH CWG with Clean Up please note that the concentration of these humic substances is not included in the quantified results and are included in the ID for information.

Please contact us if you need any further information.

Envirolab Deviating Samples Report

Units 7&8 Sandpits Business Park, Mottram Road, Hyde, SK14 3AR
Tel. 0161 368 4921 email. ask@envlab.co.uk

Client: MET Engineers Ltd, Southgate House, Pontefract Road, Leeds, LS10 1SW

Project No: 22/04779

Date Received: 17/05/2022 (am)

Project: Crossley Street, Gorton

Cool Box Temperatures (°C): 14.1

Clients Project No: P20-00073

NO DEVIATIONS IDENTIFIED

If, at any point before reaching the laboratory, the temperature of the samples has breached those set in published standards, e.g. BS-EN 5667-3, ISO 18400-102:2017, then the concentration of any affected analytes may differ from that at the time of sampling.
