Executive Summary	
The Site	Cundall has been commissioned by Select Property Group (the Client) to undertake a Phase I Geotechnical and Environmental Assessment (Desk Study) for land at Port Street, Manchester.
The Scheme	The development proposals include the redevelopment of the site with two new multi-story residential blocks, one 33 stories and the other 19 stories, totalling circa 450 apartments.
Site Description	The site comprises an irregular shaped parcel of land approximately 0.49 Ha in area. The site is principally occupied by a large, split level car parking area.
Historical Land Use	The site has undergone several developments over the period of time covered by historical mapping including having residential buildings in the northeast, a canal basin in the west (which was later infilled), several industrial buildings of varying usage across the site and in the present day the whole site operates as a car parking area, with all other buildings having been previously demolished.
Geology and Ground Conditions	The site is underlain by made ground soils of varying thickness, then by superficial deposits of Glacial Till with an underlying solid geology of the Chester Pebble Beds Formation.
UXO Risk	The Zetica online UXO mapping was reviewed for the site and this identified that the site is in an area where there is a moderate risk of UXO encounter. It is recommended that a Preliminary UXO Threat Assessment be undertaken.
Development Constraints	Hard surfacing is present across much of the site and relict foundations are likely to be within the ground. The site is split level and once had a canal basin in the west (now in-filled). Made ground is variable in thickness across the site and has been measured to at least 4m in the area of the former canal basin. Cobbles and boulders are present within the glacial till. The presence of Unexploded Ordnance cannot be discounted. Made ground may contain contaminants and may pose as a source of hazardous gases and substances aggressive to buried concrete.
Preliminary Geoenvironmental Risk Assessment	Made ground on site is considered to be a potential source of asbestos fibres, oxidisable sulphates, hazardous gas, heavy metal / PAH and hydrocarbon contamination and other presently undetermined potential contaminants. Potential risks to human health to construction workers, adjacent site users and site end users have been identified based on dermal contact, accidental ingestion, inhalation, permeation of potable water supply pipes and (in the case of ground gas and mobile hydrocarbons) migration. Risks to controlled waters (Rochdale Canal and underlying Principle Aquifer) are also plausible as are risks to buried concrete from oxidisable sulphates.
Preliminary Geotechnical Assessment	Based upon the proposed development and assumed ground conditions it is likely that a piled foundation solution will be adopted. Based on the significant thickness of made ground underlying the site, a ground bearing floor slab is considered unlikely to be viable and a suspended floor slab is likely to be required.
Recommendations for Further Work	An intrusive site investigation is recommended for geoenvironmental and geotechnical purposes and should be used to inform detailed scheme design / support scheme planning requirements. It is also recommended that a Preliminary UXO Threat Assessment be undertaken.
This Executive Summary is intended as a summary of the geotechnical and geoenvironmental assessment of the site in the context of the current development proposals based on information received by Cundall at the time of production and should be read in conjunction with the main Report text.

Introduction

1.0 Introduction

1.1 Context & Purpose

Cundall has been commissioned by Select Property Group (the Client) to undertake a Phase I Geotechnical and Environmental Assessment (Desk Study). The appraisal encompasses issues associated with ground conditions (contaminated land and geotechnical risk) that may represent a development risk. The development proposals include the redevelopment of the site with two new multi-story residential blocks, one 33 stories and the other 19 stories, totalling circa 450 apartments.

This appraisal consists of a desk-based review of the data sources identified in Section 1.3 and a non-intrusive site walkover inspection.

1.2 Site Location

The site is located west of the Ancoats area of Manchester approximately 500m north of Piccadilly Station and covers an area of 0.49Ha. Figure 1 shows the site location and its site boundary is shown in Figure 2.

Figure 1: Site Location Plan.

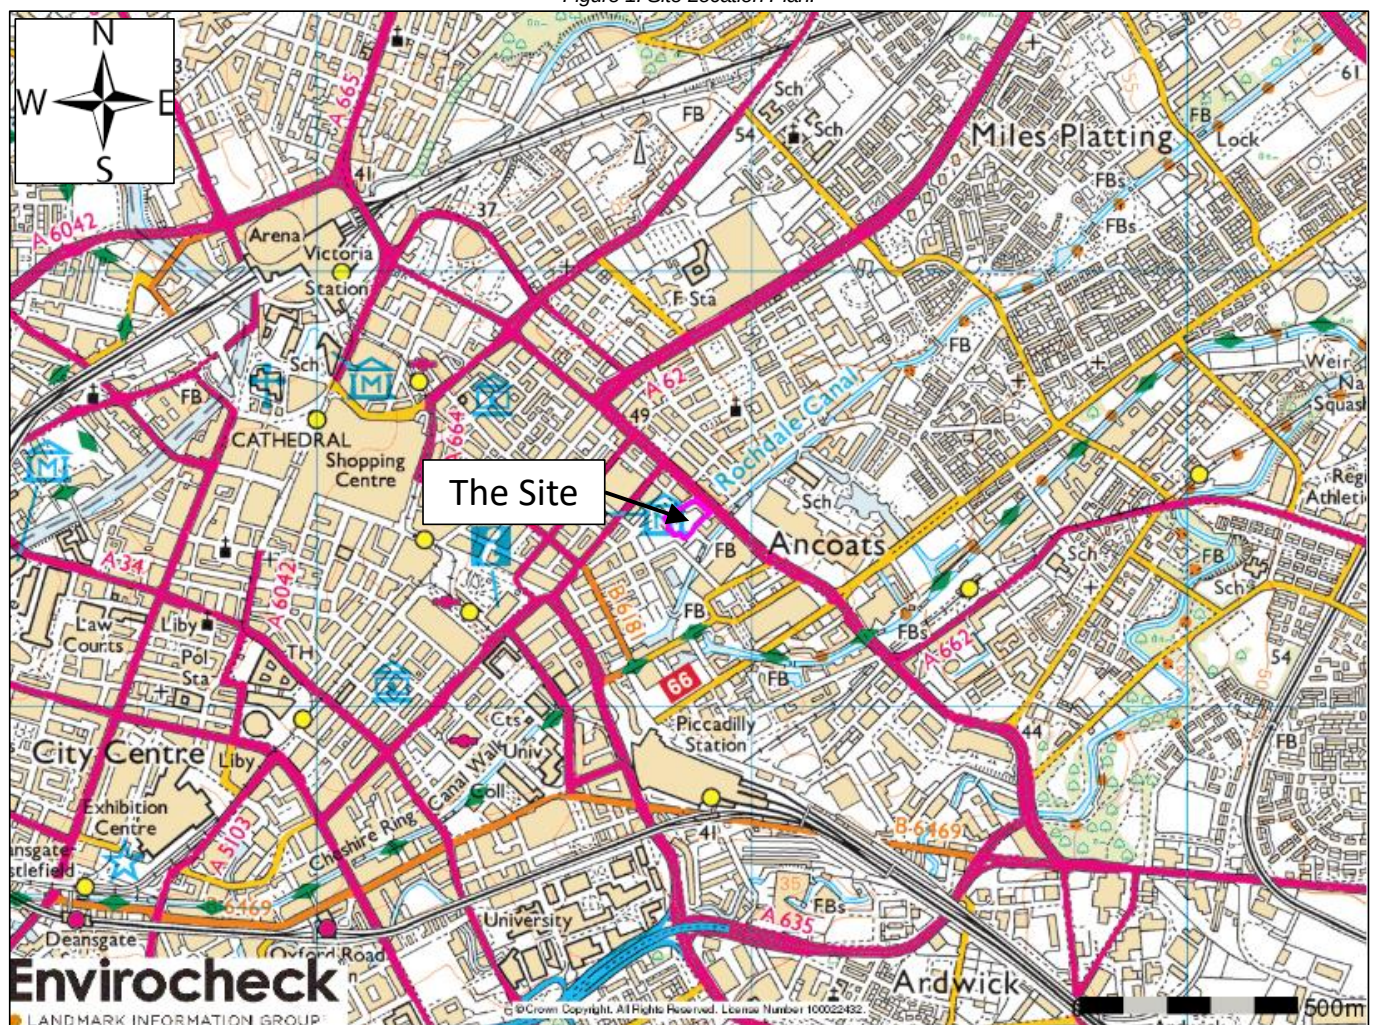

Figure 2: Site Boundary & Aerial Photograph

1.3 Data Sources

The following sources of information have been used in the preparation of this report:

- British Geological Survey (BGS): borehole and geology online viewer (reviewed January 2021)
- Zetica online Unexploded Ordnance risk mapping (reviewed January 2021)
- Coal Authority (CA) Online Interactive Map Viewer (reviewed January 2021)
- Envirocheck report (environmental data search and historical mapping) report reference: 272027337_1_1
- Manchester City Council online planning portal (reviewed January 2021).
- British Geological Survey, Sheet SJ89NW, Manchester and Salford, 1:10,000 Solid and Superficial Deposits Map
- Martin Stockley Associates (15/06/2007), Site Investigation Summary, 105/19 & 20 – Piccadilly Retail Village & Tariff Street Residential

1.4 Limitations

This report has been carried out to assess the preliminary geoenvironmental and geotechnical status of the site and to provide a reasonable assessment of the likely associated development risks posed to the proposed development.

The opinions provided and recommendations given in this report are based on the review of the data detailed in Section 1.3.

The information contained in this report is to the best of our knowledge accurate at the date of issue. If new information becomes known pertaining to the site, or the nature of the proposed development changes, Cundall reserves the right to review the information and revise the recommendations made in the report.

Should the standards, legislation, guidance, and best practice used in the production of this report be amended, updated, or withdrawn in the future but prior to development commencing, then the findings and recommendations of this report may require revision.

2.0

Site Setting, History & Previous Reports

2.0 Site Setting, History & Previous Reports

2.1 Current Land Use

The site is principally occupied by a large, split level car parking area. A walkover by a Competent Person (in accordance with the National planning Policy Framework) from Cundall was undertaken on the 25th January 2021 and its key findings are presented below.

2.1.1 Key Features

- The site is a split level car park, with the higher level being in the northern half of the site and lower level in the southern half. These split levels are separated by brick / concrete retaining walls varying between 2m and 3m high with an inclined ramp connecting the two car parking areas.
- The upper car parking area in the north is surfaced by granular made ground, whilst the surfacing material in the lower level car parking area is macadam (noted to be fractured and broken in many places)
- Several drains are noted to cross the site, and one was noted to be blocked and completely infilled by sediment / litter.
- In the west of the site there is a small area where the frame of a roof covers an area of hard-surfacing. This was noted to appear unstable.
- In the south of the site much of the car parking area is taken up by site staff and a compound associated with the off-site development to the south (namely at Brownsfield Mill).
- Further to the south and east lies the Rochdale Canal, which at the time of visit was being locally drained allowing the brick lined walls and floor of the canal to be seen.

The features described above are presented in Drawing 1030002.DWG.GL.001, Key Features Plan.

2.2 Historical Review Introduction

The historical maps and photography forming part of the Envirocheck report were reviewed to determine the historic development and land uses both on and around the site.

For more details please refer to the historical maps which are presented in Appendix A.

2.2.1 Key Historical Site Uses

The site's history can be broadly divided into five key development periods (with additional detail given subsequently):

- From the earliest maps (1850s) the north-eastern most part of the site was used as residential housing with private gardens, a 'basin' connected to the local canal system (later called the Rochdale Canal) was situated in the western half of the site and the remainder of the site was occupied by industrial buildings (including sawmills and Timber Yards) and wharfs. The Rochdale Canal was located 30m to the southeast and the remaining surrounding area was a mix of residential and industrial land uses including wharfs, sawmills and cotton mills as shown in Figure 3.
- No changes occurred until the 1948 map when the 'basin' no longer appears. In its place is Hills Service Garage and a yard, the 'basin' having likely been infilled both onsite and immediately offsite to the southeast. A Machine Tool Works was located in the far west of the site during this time and the function of several more industrial buildings surrounding the site are now shown to include a paint works, engineering works and a brass and iron works, as shown in Figure 4.
- An above ground tank is shown in the centre of the site in the 1954 edition of the map however is no longer present in the 1963 map when much of the site is occupied by Garages. The Rochdale Canal is now labelled as disused as shown in Figure 5, and there is a general decrease in the amount of industrial buildings surrounding the site.
- By 1992 only a single industrial building labelled as 'works' existed on site in the northwest corner along with the residential houses in the northeast, the remainder of the site open ground / yard area during this time as shown in Figure 6. The surrounding area continues to see a reduction in industrial buildings.

- At some time between 1999 and 2021 (there are no maps covering this period) the remaining buildings on site were removed and the site's primary use became a split level open car parking area as it remains to the present date. The site's present day layout can be seen in the aerial photograph presented as Figure 2 earlier within this report.

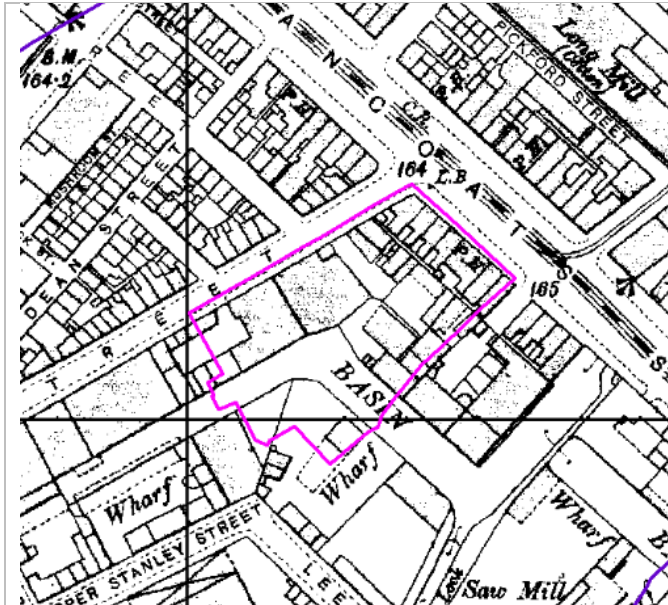

Figure 3: 1908 Historical Map

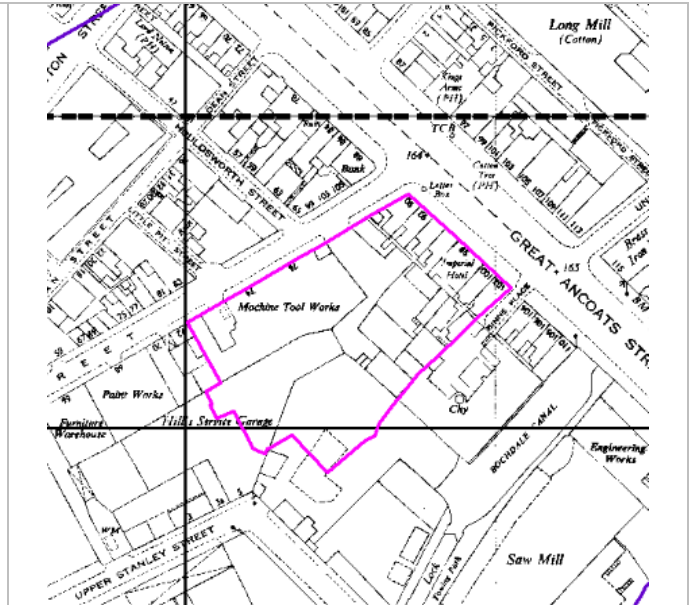

Figure 4: 1948 Historical Map

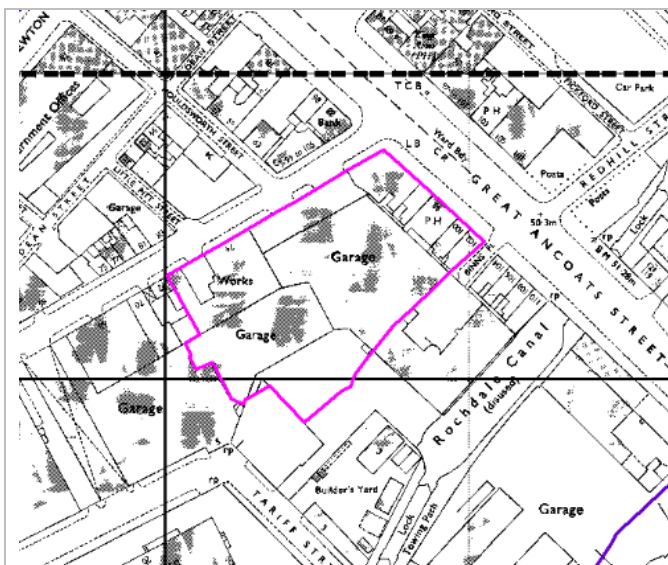

Figure 5: 1963 Historical Map

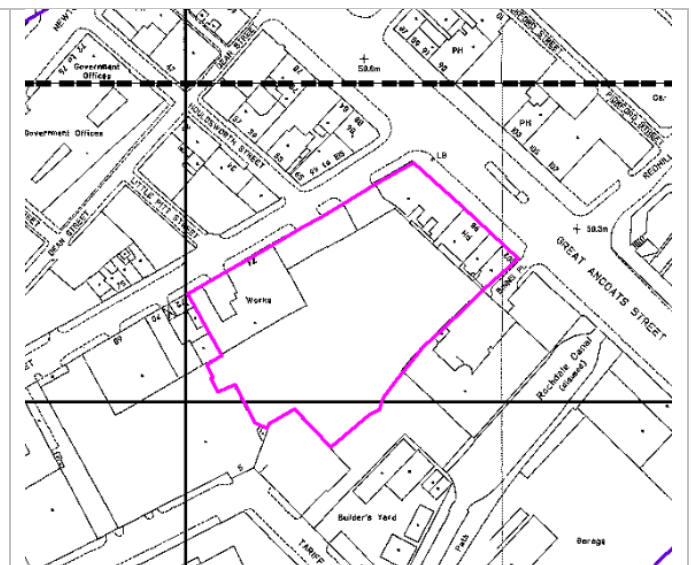

Figure 6: 1996 Historical Map

2.3 Previous Reports

Consulting Manchester City Council's online planning portal did not identify any ground investigation reports pertaining to the site. However a summary of one ground investigation for a plot of land immediately to the south of the site was found, and whilst it did not include any factual data, any information contained within it relevant to the current development proposals are presented in the following section.

2.3.1 Martin Stockley Associates (15/06/2007), Site Investigation Summary, 105/19 & 20 – Piccadilly Retail Village & Tariff Street Residential

This summary report details the findings of a small ground investigation undertaken immediately to the southeast of the current development site and included two boreholes and two trial pits (logs were not included in the report). Ground conditions encountered included made ground (up to 4m thickness within the infilled basin) overlying Glacial Till proven to between 15m and 25m.

Chemical laboratory analysis undertaken on samples extracted from the site showed that the made ground material used to in-fill the historical 'basin' (that extends to the north into the current site) had high levels of arsenic and lead when compared against the Greater Manchester Waste Regulation Authority (GMWRA), and leachate testing did not indicate a likely a risk to underlying groundwater bodies. No contaminants were identified in the underlying glacial till deposits. It should be noted that in order to assess the site's suitability for the proposed development, new testing and assessment in line with current Land Quality guidance and standards would need to be undertaken.

The report also indicated that relict buried foundations are likely present across the site, which is also likely to be the case for the current site area.

3.0

Geological & Environmental Setting

3.0 Geological & Environmental Setting

3.1 General

The geological and geoenvironmental setting of the site has been determined primarily from the information contained within the references listed in Section 1.3 of this report. Where reference is made to other information sources with respect to the geoenvironmental setting of the site, the source used is stated in the text.

The Envirocheck Report obtained for the site is included in Appendix B.

3.2 Geology

3.2.1 Published Geological Information.

The BGS geological map of the area indicates that the whole site is underlain by superficial deposits of Glacial Till (described on the map as being a stiff, sandy, pebbly clay) with an underlying solid geology of the Chester Pebble Beds Formation (Pebbly Sandstones with interbedded Mudstones).

Given that the site history detailed in the previous chapter and the presence of an infilled canal basin and retaining walls on site, made ground is also anticipated to varying degrees of thickness across the site (with a significant thickness likely within the infilled basin and behind retaining walls in the higher level part of the site to the north).

3.2.2 BGS Borehole Records

A single historical BGS borehole (SJ89NW31) is located within the site boundary in the far northeast of the site and shows the ground to comprise Made Ground to 1.30mbgl, Glacial Till from 1.30mbgl to approximately 24mbgl with Sandstone (with a weathered upper horizon that is recovered as sand) underlying the Glacial Till to the base of the hole at 29mbgl.

Three publicly accessible BGS boreholes (SJ89NW3987, SJ89NW30 & SJ89NW3986) are located within 100m of the site boundary that corroborate this downward sequence and indicate Made Ground to vary between 1.70m and 3.00m thickness.

Historical borehole logs consulted in this report are presented as Appendix C.

3.3 Hydrogeology

The superficial deposits on site are classified as a Secondary Aquifer - Undifferentiated.

The solid geology is recorded as a Principle Aquifer.

There are no groundwater abstractions or groundwater discharge consents recorded within 750m of the site.

The site is not underlain by a groundwater source protection zone.

3.4 Hydrology

The Rochdale Canal is located approximately 30m southeast of the site (though as describe earlier it was being locally drained).

There are no surface water abstractions within 1km of the site.

The closest surface water discharge consent is located 307m to the east of the site at a sewerage network pumping station.

3.5 Mineral Extraction

3.5.1 BGS Recorded Mineral Site (From Envirocheck Data)

No active records or mineral extraction are recorded on, or within 1km of the site.

The site does fall within a coal mining reporting area but does not lie within a development high risk area. A preliminary examination of geological maps and the Coal Authority online interactive map viewer indicated that coal is located at a significant depth and that several geological units (including at least the Chester Pebble Beds Formation, Manchester Marls Formation and the Collyhurst Sandstone Formation) separate the site surface from any possible workings. Risk posed to the site from coal mining is therefore considered likely to be very low.

The site does not lie within a Cheshire Brine consultation area.

3.6 Ground Stability (Non-Mineral Extraction)

The site is within an area that has been designated in the Envirocheck report as generally having negligible or low risks of ground stability hazards.

3.7 Landfill & Waste

The site falls into the Manchester City Council local authority area for landfill coverage.

There are no landfill sites (either active or historic), registered waste transfer sites, integrated pollution controls or registered waste sites recorded either on or within 500m of the site.

A single licenced waste management facility is located 381m to the north of the site and is related to 'end of life vehicles'.

It should be noted, however, that review of historic maps has identified the presence of an infilled Canal Basin on-site (and immediately off-site to the southeast) along with the presence of retaining walls noted in the walkover that may have been backfilled with materials of undetermined origin (that may include putrescible/degradable constituents).

3.8 Radon

The site falls within a 'Lower probability radon area' where no radon protection measures are necessary for new structures.

3.9 Statutory Registers & Environmental Issues

3.9.1 Industrial Land Use

Whilst there are no Contemporary Trade Directory Entries registered within the site there are a total of 114 located within 0-250m of the site boundary.

These include clothing and fabric manufacturers, cleaning services, car engine tuning and diagnostic services, coal and smokeless fuel merchant and distributors, car breakers and dismantlers and road haulage services. Many of these are now 'inactive', and the closest 'active' Contemporary Trade Directory Entry is located 106m to the west and is classified as a copying and duplicating service.

3.9.2 Fuel Station Entries

No active fuel station entries are recorded within 1km of the site. The closest obsolete record is 195m northwest of the site.

3.9.3 Pollution Incidents / Preventions / Controls & Prosecutions

None of the following are recorded within 1km of the site:

- Integrated Pollution Controls.
- Integrated Pollution Preventions and Controls.
- Prosecutions Relating to Controlled Waters or Authorised Processes
- Enforcement and Prohibition Notices

7No. Local Authority Pollution Prevention and Controls exist within 500m of the site. The closest being related to a local authority air pollution control associated with Express Printers Manchester Ltd.

2No. Local Authority Pollution Prevention and Control Enforcements also exist within 500m. The closest being located 336m to the south relating to air pollution from a furnace emissions.

A total of 5No. Pollution Incidents to Controlled Waters are located within 500m of the site, all of which relate to Category 3 – Minor Incidents. The closes of these incidents is located 109m to the northeast and relates to an unknown pollutant within the catchment area of the Rochdale Canal.

3.9.4 Sensitive Land Uses

A nitrate vulnerable zone is located 191m to the northwest of the site.

No other sensitive land uses are recorded within 1km of the site.

3.9.5 Hazardous Substances

No hazardous substance records exist within 1km of the site.

3.10 Unexploded Ordnance (UXO) Risk

The Zetica online UXO mapping was reviewed for the site and this identified that the site is in an area where there is a moderate risk of UXO encounter. However, whilst the western half of Manchester was most seriously affected during the Second World War it is possible that undetected UXO threats may exist buried within the ground at this location. It is therefore recommended that a Preliminary UXO Threat Assessment be undertaken due to the inherent uncertainty.

3.11 Local Authority Information

The Manchester City Council online planning portal was reviewed to determine whether any information with respect to ground conditions was available publicly. The only available ground investigation available for the site is reviewed previously in Section 2.3 of this report.

There were three applications on the planning portal; one for the development of a mixed use development including housing and A1 retail, another for the redevelopment of land at canal gardens for office development and mixed use retail and leisure usage and another application for the erection of two six storey mixed use blocks including commercial units, retail and residential (with documents including the summary GI report reviewed in Section 2.3 of this report).

3.12 Summary of Potential Identified Contamination Risks

The main geoenvironmental risks identified through review of data sources referenced in Section 1.3 are as follows:

- Contaminants may be present within the made ground across the site from the numerous historical industrial land uses along with the site's current use as a car parking area. These could include (but not be limited to) asbestos, metals, inorganic compounds and hydrocarbons. Made ground may be particularly thick behind retaining walls on site where it may form a backfill and in in this scenario could locally be sufficiently thick to generate hazardous ground gas.
- Contaminants may be present within the infilled canal basin both onsite and offsite (including lead and arsenic, as identified within the historical GI) including but not limited to asbestos, metals, inorganic compounds and

hydrocarbons. It is possible that the canal backfill is sufficiently thick to generate hazardous ground gas. Although the canal basin is infilled, it could still represent a preferential pathway for lateral migration both from and to the site.

4.0

Preliminary Conceptual Site Model & Risk Assessment

4.0 Preliminary Conceptual Site Model & Risk Assessment

4.1 Background Methodology

The contaminated land regime under Part II A of the Environmental Protection Act 1990 provides a risk based approach to the identification and remediation of land where contamination poses an unacceptable risk to human health or the environment. For 'contaminated land' to exist a valid contaminant linkage must be present; that is, there should be a source of contamination, a receptor where 'significant harm' or 'significant possibility of harm' may be caused; or pollution of controlled waters is being, or likely to be caused, and a pathway which connects the two. Should any element of this contaminant linkage not be present (or severed) then the land may not be regarded as contaminated land. The risk assessments undertaken in this report have been undertaken in accordance with current statutory guidance and good practice, including CIRIA C552.

The terminology, definitions and framework used during the risk assessment for the site are presented in Appendix D. The definitions and risk matrix are based upon CIRIA C552. It should be noted that when using the risk assessment framework provided by CIRIA C552, where a consequence is severe even if the probability of the risk is unlikely, the risk classification must be low to moderate as a minimum.

4.2 Preliminary Conceptual Site Model

A preliminary risk assessment has been undertaken based on the reviewed information in this report. This is based upon the "source – pathway – receptor" conceptual risk model in accordance with the relevant UK legislation. Potential sources, pathways and receptors identified as part of this Phase I Assessment are highlighted in Table 1.

Table 1: Potential Sources, Pathways & Receptors

Potential Sources of Contamination
Made Ground / Canal Infill Materials that may contain / give rise to: - Hazardous gases and / or volatile vapours. - Total concentrations of metals, inorganic compounds, organic compounds or asbestos. - Dissolved phase concentrations of metals, inorganic compounds or organic compounds - Free phase non-aqueous phase liquids - Compounds that may be aggressive to buried concrete across the site. Off site sources of contamination (resulting from the historic industrial usage of the surrounding area) that may result in the migration of either/both hazardous gases or dissolved or free phase contaminants into the site
Potential Contamination Migration Pathways (and context)
Ingestion of soils/dust/free product during and following construction (human health). Direct contact during and following construction (human health). Inhalation of fugitive dust or fibres during and following construction (human health). Permeation of potable water supply pipes (human health). Lateral / vertical migration of asphyxiant / explosive ground gasses and volatile vapours (human health and built environment) Direct contact with buried concrete following construction (built environment). Lateral / vertical migration of mobile contaminants, either dissolved or free phase (human health and Controlled Waters).
Potential Contamination Receptors
Surface water (Rochdale Canal) Controlled Waters – groundwater (Principal Aquifer). Note this is only plausible where piled foundations penetrate the full thickness of Glacial Till into the underlying Sandstone. Construction workers and/or maintenance workers. Adjacent Site Users during construction works. Site end users. Built Environment

4.3 Risk Assessment Considerations

The following risk assessment assumes that the proposed development will consist of two multi-storey residential tower blocks (assumed to consist of apartments with shared and managed POS) which will constitute a Residential without Plant Uptake end use in terms of land quality risk assessment modelling. Table 2 summarises the key considerations in this risk assessment.

The nature of the development assumed for the CSM is based on the discussion of geotechnical considerations presented in Section 5 of this report.

Table 2: Risk Assessment Considerations

Human Health	- Given the previous industrial use of the site along with it's current use as a car parking area there is the potential for made ground on the site to be impacted by contaminants, particularly within the infilled canal basin in the western half of the site where a ground investigation carried out on the immediately neighbouring land indicated elevated lead and arsenic. This will pose a risk to construction and maintenance workers who will be in direct contact with it as well as a slight risk to end users (who may be in brief contact with it in outside areas where soft landscaping is present). - The made ground may also be a source of hazardous ground gas or volatile vapours, as may offsite sources including offsite infilled canals, presenting a risk to construction and maintenance workers in excavations and confined spaces along with to end users if mitigation measures are not adopted. - The made ground may represent a source of compounds that may permeate potable water supply pipes, therefore presenting a risk to both site end users and construction and maintenance workers. - Made ground on site may contain asbestos given the numerous buildings that have been built and demolished on site. The highest risk is to construction and maintenance workers as they will be in direct contact with site soils. A small risk to site end users as well as adjacent site users exists also as some parts of the site may be used for soft landscaping (the proposed building footprints or hardstanding may not cover the whole site). - There is also a possibility of offsite contamination having migrated on to the site from the nearby garages through permeable made ground deposits.
Built Environment	- The made ground may present a source of hazardous ground gas, which if allowed to accumulate in confined spaces pose an explosion risk. - The made ground may contain compounds that are aggressive to concrete.
Water Environment	Whilst testing carried out as part of a ground investigation on land immediately to the south of the site indicated that no sources of leachable contaminants could be detected. However, given the development history of the site, there may leachable dissolved or free phase contaminants present within the site that could pose a risk to Controlled Waters.

4.4 Preliminary Risk Assessment

A preliminary Conceptual Site Model (CSM) of the site has been generated. The Preliminary Risk Assessment Matrix is outlined in Table 3 and a graphical representation of the Preliminary CSM is presented as Drawing 1030002.DWG.GL.002.

Table 3: Preliminary Risk Assessment Matrix

Source	Pathway	Receptor	Consequence of Pollutant Linkage	Likelihood of Pollutant Linkage	Overall Risk
Contaminants within or derived from made ground soils and infilled Canal Basin. On site	1. Inhalation of airborne asbestos fibres / Contaminated dust	Site End Users	Severe	Low Likelihood	Moderate Risk
		Construction Workers / Maintenance Workers	Severe	Likely	High Risk
		Adjacent Site Users	Severe	Low Likelihood	Moderate Risk
	2. Dermal contact / Ingestion	Site End Users	Severe	Unlikely	Moderate / Low Risk
		Construction Workers / Maintenance Workers	Severe	Likely	High Risk
	3. Lateral and vertical migration of leachable contaminants	Surface Waters	Medium	Low Likelihood	Moderate / Low Risk
		Principal Aquifer	Medium	Unlikely	Low Risk
	4. Direct contact	Buried Concrete	Medium	Likely	Moderate Risk
		Site End Users	Severe	Likely	High Risk
	5. Permeation through water supply pipes	Construction Workers / Maintenance Workers	Severe	Likely	High Risk
		Site End Users	Severe	Likely	High Risk
	6. Lateral and vertical migration of hazardous ground gas and volatile vapours	Construction Workers / Maintenance Workers	Severe	Likely	High Risk
		Built Environment	Severe	Likely	High Risk
Contaminants within off-site made ground soils and adjacent (off-site) infilled Canal Basin	7. Lateral and vertical migration of hazardous ground gas and volatile vapours	Site End Users	Severe	Low Likelihood	Moderate Risk
		Construction Workers / Maintenance Workers	Severe	Low Likelihood	Moderate Risk
		Built Environment	Severe	Low Likelihood	Moderate Risk
	8. Lateral migration of leachable contaminants	Site End Users	Severe	Unlikely	Moderate / Low Risk
		Construction Workers / Maintenance Workers	Severe	Low Likelihood	Moderate Risk
		Built Environment	Severe	Unlikely	Moderate / Low Risk

5.0

Preliminary Geotechnical Assessment

5.0 Preliminary Geotechnical Assessment

5.1 Ground Model

The anticipated ground model at the site consists of the following downward sequence:

- Hard surfacing making up the majority of the site (car parking area)
- Made ground / Fill across the site to varying thickness, but, being thickest (up to at least 4m) in the west where the Canal Basin was in-filled and likely to be at least 2.5m thick behind the on-site retaining walls.
- Stiff Glacial Tills to between 25-28mbgl.
- Solid geology of the Chester Pebble Beds (presenting as a red sandstone with a weathered upper surface).

Ground investigation will be required in order to confirm the actual ground model within the subject site.

5.2 Proposed Development - Foundations

At the time of writing it is understood that the development will consist of two high rise residential towers of 33 stories and 19 stories. Piled foundations are therefore likely to be required in order to achieve sufficient resistance to support the imposed structural loads.

5.3 Development Considerations

Development constraints / abnormalities are potentially anticipated to include the following:

- Hard surfacing materials cover the whole site and will require breaking out.
- Relict buried foundations / obstructions associated with the historical land uses may require grubbing as they could likely present obstructions to the construction of new foundations. Likewise, the canal basin that formally existed in the west of the site is likely to have been brick lined, and so this too will present an obstruction to foundations.
- Given the change in levels in the existing site. It is considered likely that it will be required for the development to link to the existing highways levels to the north east and north west. Therefore, it may be beneficial to construct to floor slabs of the proposed structures at the lower level (essentially forming basements) and linking to two structures with a podium deck. Adopting this form of development would minimise the need for importation of fill to raise the lower site levels, and also minimise the need for disposal off site of surplus materials. The existing retaining walls may require breaking out and some regrading works undertaken.
- Variable made ground thickness across the site with a greater thickness around the retaining walls and historically infilled canal basin in the west of the site may necessitate the adoption of suspended ground floor slabs.
- The potential for cobbles and boulders within the Glacial Till will have to be considered when determining suitable piling methods for the site.
- The possible presence of UXO, a site specific Preliminary UXO Threat Assessment should be completed prior to any intrusive investigation or construction works commencing.
- The possible presence of and substances aggressive to buried concrete, requiring a higher concrete design class to be adopted for subsurface concrete. Future testing and assessment in accordance with BRE Special Digest 1 will be required.
- The potential presence of hazardous gas or volatile vapours may result in the need for gas protection measures to be incorporated into any new structures.
- The southeast of the site is currently being used as a compound area for off-site building works, possibly meaning that short term access to parts of the site may require discussions with the adjacent land users.
- The unstable looking roof frame in the far west of the site will need to be safely removed before work can be undertaken in that area.

Recommendations

6.0 Recommendations

6.1 Recommendations

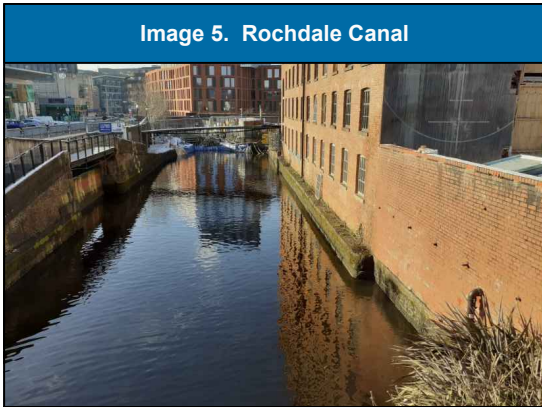

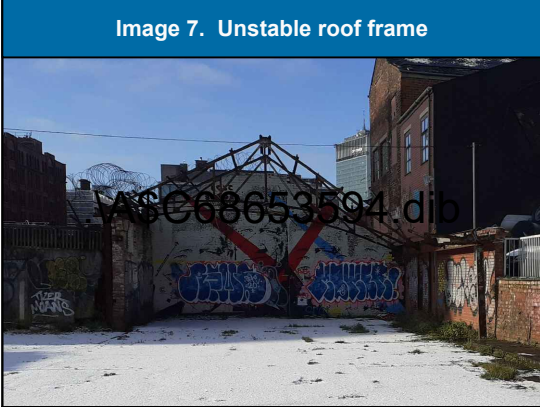

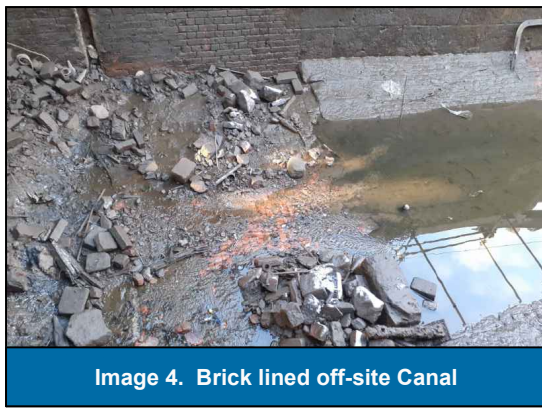

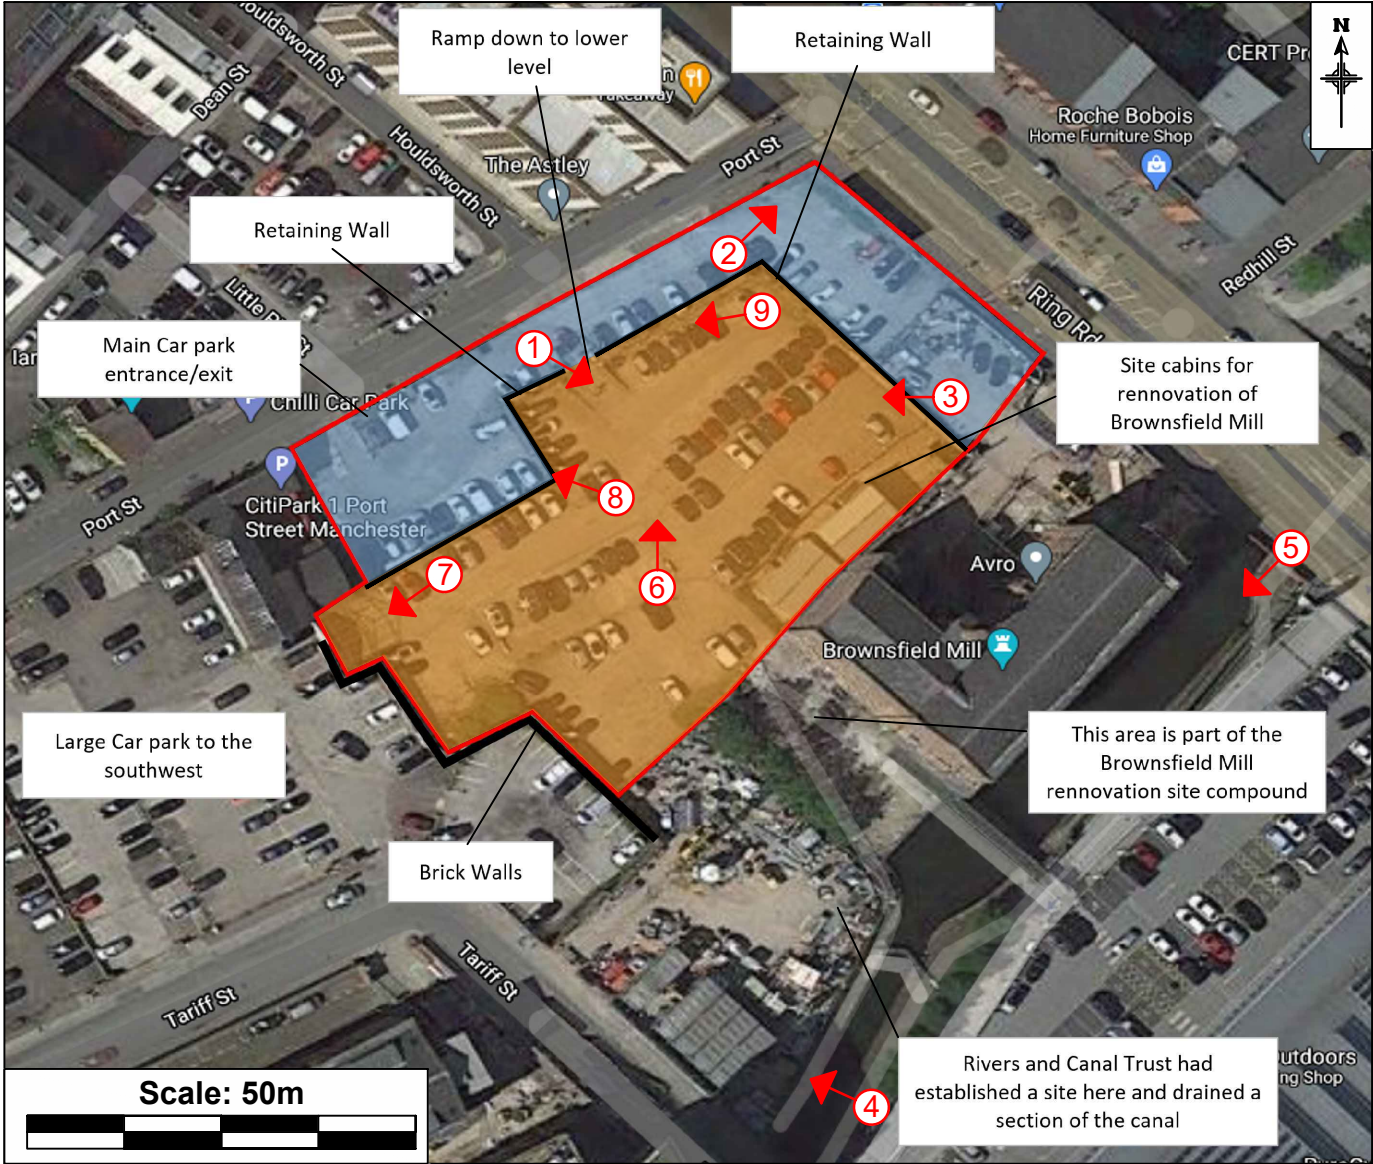

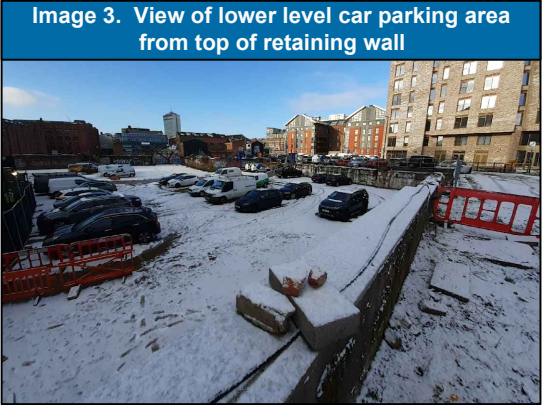

It is recommended that an intrusive ground investigation be scoped and undertaken and its findings be reported in the form of a Phase II Interpretative Ground Investigation Report in order to confirm the ground and groundwater conditions on site, determine the actual land quality (contamination) status of the site and allow refinement of the Conceptual Site Model, and, determine the required geotechnical design parameters for scheme design.

At this early stage of scheme development it is recommended that the investigation addresses the following key points in order to effectively inform the scheme cost plan

- Provide sufficient information to enable preliminary foundation design to be completed.
- Provide sufficient information to inform the likely waste categorisation of surplus soils generated by the scheme that require disposal off site. This should be in accordance with WM3 and EA guidance.
- Provide sufficient information to advise if gas protection measures will be required for the scheme and if so the likely measures required.

Additionally, it is recommended that a Preliminary UXO Threat Assessment be undertaken prior to intrusive investigation in order to establish the threats posed by UXO across the site and determine if any additional precautions be needed to safely investigate the site.

DO NOT SCALE FROM THIS DRAWING

Notes

This Preliminary Conceptual Site Model is based upon the "Source - Pathway - Receptor" linkages identified by this report.

- Made Ground
- Glacial Till
- Chester Cobble Beds
- ① → Potential Pollutant Linkage

Source	Pathway	Receptor	Consequence of Pollutant Linkage	Likelihood of Pollutant Linkage	Overall Risk
Contaminants within made ground soils and infilled Canal Basin	1. Inhalation of airborne asbestos fibres / Contaminated dust	Site End Users	Severe	Low Likelihood	Moderate Risk
		Construction Workers / Maintenance Workers	Severe	Likely	High Risk
		Adjacent Site Users	Severe	Low Likelihood	Moderate Risk
	2. Dermal contact / Ingestion	Site End Users	Severe	Unlikely	Moderate / Low Risk
		Construction Workers / Maintenance Workers	Severe	Likely	High Risk
	3. Lateral and vertical migration of leachable contaminants	Surface Waters	Medium	Low Likelihood	Moderate / Low Risk
		Principal Aquifer	Medium	Low Likelihood	Moderate / Low Risk
	4. Direct contact	Buried Concrete	Medium	Likely	Moderate Risk
	5. Permeation through water supply pipes	Site End Users	Severe	Likely	High Risk
		Construction Workers / Maintenance Workers	Severe	Likely	High Risk
Contaminants within off-site made ground soils and adjacent infilled Canal Basin	6. Lateral and vertical migration of hazardous ground gas and volatile vapours	Site End Users	Severe	Likely	High Risk
		Construction Workers / Maintenance Workers	Severe	Likely	High Risk
		Built Environment	Severe	Likely	High Risk
	7. Lateral and vertical migration of hazardous ground gas and volatile vapours	Site End Users	Severe	Low Likelihood	Moderate Risk
		Construction Workers / Maintenance Workers	Severe	Low Likelihood	Moderate Risk
		Built Environment	Severe	Low Likelihood	Moderate Risk

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Additional SIMs

Published 1978 - 1985

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

10k Raster Mapping

Published 1999

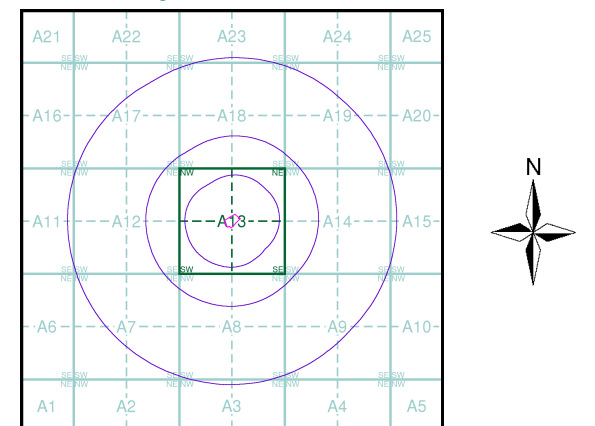

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Lancashire And Furness

Published 1850 - 1851

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

LANDMARK INFORMATION GROUP®

Lancashire And Furness

Published 1891

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

A Landmark Information Group Service v50.0 21-Jan-2021 Page 2 of 2

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

Appendix D Conceptual Site Model - Background Methodology

The contaminated land regime under Part II A of the Environmental Protection Act 1990 provides a risk based approach to the identification and remediation of land where contamination poses an unacceptable risk to human health or the environment.

For 'contaminated land' to exist a valid contaminant linkage must be present; that is, there should be a source of contamination, a receptor where 'significant harm' or 'significant possibility of harm' may be caused; or pollution of controlled waters is being, or likely to be caused, and a pathway which connects the two. Should any element of this contaminant linkage not be present (or severed) then the land may not be regarded as contaminated land.

The risk assessments undertaken in this report have been undertaken in accordance with current statutory guidance and good practice, including CIRIA C552. The following tables present the definitions of the risk terms used during risk assessment for the site based on CIRIA C552.

Table 4: Contamination Risk Rating Terminology - Consequence

Potential Consequence of Hazard – Receptor Linkage (in accordance with CIRIA C552)	
Severe	Short-term (acute) risk to human health likely to result in significant harm. Short-term risk of pollution of sensitive water resource. Catastrophic damage to buildings/property. A short-term risk to a particular ecosystem, or organism forming part of such ecosystem.
Medium	Long-term (chronic) damage to human health. Pollution of sensitive water resources. A significant in change in a particular ecosystem, or organism forming part of such ecosystem. Damage to sensitive buildings and structures.
Mild	Slight short term health effects to humans. Slight pollution of non-sensitive water resources. Some change to population densities but with no negative effects on the function of the ecosystem. Slight damage to sensitive buildings, structures and services.
Minor (Negligible)	Non-permanent effects to human health (easily prevented by means such as personal protective clothing etc.). Easily repairable effects of damage to buildings, structures and services (e.g. discolouration of concrete).

Table 5: Contamination Risk Rating Terminology - Probability

Classification of Probability of Hazard – Receptor Linkage (in accordance with CIRIA C552)	
High likelihood	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely in the long term.
Low likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a long period such an event would take place, and is less likely in the shorter term.
Unlikely	There is pollution linkage but circumstances are such that it is improbable that an event would occur even in the very long term.

Table 6: Matrix of Consequence versus Probability to determine Resultant Risk Classification

		Consequence			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk
	Likely	High Risk	Moderate Risk	Moderate / Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate / Low Risk	Low Risk	Very Low Risk	Very Low Risk

Table 7: Resultant Risk Classification Definitions

Potential Significance: Risk Classification (in accordance with CIRIA C552)	
Very High Risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, or, there is evidence that severe harm to a designated receptor is currently happening.
High Risk	Harm is likely to arise to a designated receptor from an identified hazard at the site. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term.
Moderate Risk	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. Investigation (if not undertaken already) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the long term.
Moderate / Low Risk	Not defined in context in CIRIA 552.
Low Risk	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very Low Risk	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.
