1.0 INTRODUCTION

Fairhurst have been appointed by Marco Living 2 Ltd & Axis-Re Ltd to prepare a Phase I Desk Study Report for a site located on Tariff Street, Manchester, at Grid reference 384790, 398380. The site currently comprises of hard standing, used as car parking. There is a small derelict building in the northern corner of the site.

This report has been prepared to support the planning application for the proposed development. This report provides a desk study review of the site as follows:

- Review of the historical, geological and environmental site conditions;
- Review of the potential sources of contamination on site and on adjacent land;
- Development of a Conceptual Site Model and Preliminary Environmental Risk Assessment to determine whether there are any potentially unacceptable risks associated with the current and historical site uses; and
- Review of the geotechnical hazards and constraints.

1.1 Development Proposals

The development comprises two residential blocks as shown on the architect's plans in **Appendix A**.

Full planning permission for the demolition of an existing building on site and the erection of two residential apartment buildings (Use Class C3) including a part 9, part 10 (with setback amenity level) on Block 1 and a separate stand-alone 12 storey building (comprising of 267 dwellings in total), with ground floor commercial use (Use Class E), associated resident's amenity space, cycle parking, landscaping, access, street loading and other associated works on Block 2.

1.2 Sources of Information

The following information has been reviewed in preparation of this report:

- Site plans;
- External layout plans;
- Landmark Envirocheck Report;
- British Geological (BGS) 1:50,000 maps;
- British Geological (BGS) recorded borehole records;
- Historical Desk Study Report (Ref.1)

2.0 SITE DESCRIPTION

2.1 Site Location, Description and Topography

The development site is located at land off Tariff Street, Manchester, at Grid reference 384790, 398380.

On Site

The site comprises of hard standing associated with the clearance of former built development which is now in use for car parking.

A small derelict building is located in the extreme northern corner of the site. This abuts and is joined to an adjacent building on third party land known as Sam's Yard. The on-site derelict building, which is to be removed as part of the development, is understood to provide some structural support to the adjacent Sam's Yard building which will be retained by the third party owner. Structural support works will be required to facilitate removal of the on-site derelict building (see Fairhurst report Ref 4).

There are boundary walls to the south and north of Block 1 and a wall surrounds the perimeter of Block 2. The ownership and position of the legal boundary in relation to these walls is unknown.

The site is located within a wider area of similar development plots and commercial and industrial area.

Topography

The levels shown on the site are generally flat. Available plans show that the development site is at an elevation of between 54m and 56mAOD. The topography survey shows a number of retaining walls within and at the site boundary.

2.2 Historical Land Use

Table 1. Current Land Use

On Site	Adjacent Land
All historical buildings have been removed to leave just the former floor slab hard standings. The site is currently in use as a car par	Surrounded by industrial and commercial units.

Table 2. Historical Land Use

Year	On Site	Adjacent Land
1893	The site comprises of numerous buildings associated with warehousing. A canal wharf that feeds into the adjacent Rochdale	- Land under development - Residential buildings and a number of industrial units connected with the wharf.

Year	On Site	Adjacent Land
	Canal is present beneath the northern part of the site	- A rail line is present to the south of the site. - A significant number of arms and extensions associated with the mariner and wharf.
1908	No significant change	An increase in building development surrounding the wharf
1922- 1932	- No change on the site. - The canal wharf in the north of the site has been infilled and replaced with a large garage building (Hills Service Garage), a paint works and a furniture warehouse	- One outbuilding has been constructed within the eastern sector of the subject site. - Additional units have been added in the northern area of the site. - Additional units with chimneys for industrial purposes surrounding the site.
1948	The canal wharf has been infilled and replaced by a furniture warehouse, paint works and Hills service garage	- A machine tool warehouse has been recorded to the east of the site. - Units to the east of the site are no longer recorded.
1951	The furniture warehouse is no longer recorded.	No significant change
1951-1955	No significant change	Units to the east remain unrecorded.
1963 - 1981	Hills service garage has split into two units.	Additional garages have been constructed in the south east and north east of the site
1983- 1990	The site is now occupied by two main buildings which share a dividing wall and hardstanding shown on the site.	No significant change.
1990- 1992	The two main buildings were demolished.	- The structures in the eastern side of the site have been combined into one structure. - A builder's yard is shown on the historical map of 1992.
1992- present	No significant change	The structures in the eastern side of the site have been combined into one structure.

Year	On Site	Adjacent Land

A review of the historical plans dating back to 1893 and historical site plans in **Appendix B**, indicates that the site is located in an area that has been industrial in nature and comprises of historical factory units, chimneys, canal wharf, warehouses and garages. The key land uses and features include;

- A Canal wharf (filled around 1930's) connecting into the adjacent Rochdale canal.
- Warehouses
- Garages

This indicates that the site has been subject to potentially contaminative land uses.

2.3 Geology

2.3.1 Ground Conditions

The historical plans show extensive development from the 1890's including built development and an infilled Canal wharf connecting to the adjacent Rochdale canal. As such, made ground associated with the historical development and infilled canal wharf would be expected to be present.

BGS 1:50,000 Maps

BGS 1:50,000 maps (**Appendix B**) indicate the development site is expected to be underlain by the following geology:

- drift deposits of Glacial Till
- Overlying solid geology deposits from the Chester Formation.

Historical Borehole Records

A series of historical borehole records are available from the BGS. The records and location plans are included in Appendix B. The nearest records are directly north of the site, and approximately 100m to the South, East and West of the site and they indicate the following:

- Made Ground, consisting of ash, cinders and stone.
- Made Ground recovered as a firm clayey sandy sandstone
- Stiff to very stiff sandy Clay to depths of 15m+
- Sandstone bedrock was identified at depths of around 28m

2.3.2 Geological Hazards

Information on geological hazards has been obtained from the desk study information and is summarised below:

- Potential for deep Made Ground associated with historical development and infilled canal wharf.
- Potential for shallow groundwater perched within the Made ground and Canal wharf infill.
- Very low potential for collapsible ground stability hazards.
- Very low for compressible ground stability hazards.
- Very low for landslide ground stability hazards.
- Very low for shrinking or swelling clay ground stability hazards.

2.4 Controlled Waters

2.4.1 Groundwater

Information on groundwater has been obtained from the desk study and is summarised below:

- The superficial deposits underlying the site are designated as Secondary undifferentiated aquifer with low vulnerability.
- The bedrock underlying the site is designated as a Principal aquifer
- The site is not located within a Nitrate Vulnerable Zone
- The Envirocheck report indicates there are three groundwater abstractions within 1.0km radius of the site; however none are for potable use.
- The site is not situated within a Source Protection Zone.

The site is expected to be underlain by variable Made ground associated with the former built development and an infilled Canal wharf. Shallow perched groundwater may be present within the made ground and be at a level consistent with the current Rochdale canal water level.

2.4.2 Surface Water

Information on the surface water has been obtained from the desk study information for the site and is summarised below:

- There are areas of controlled waters in the Southern and Eastern part of the site.
- There are a number of discharge consents located around the site and a number of pollution controlled water.

2.4.3 Perched water to the Infilled Canal Wharf

The site includes a former canal wharf which connected to the adjacent Rochdale canal. The point of connection of the former wharf with the adjacent canal is still visible. The canal wharf was infilled in the 1940's. The made ground infill may contained

perched ground water and be at a level consistent with the current Rochdale canal water level. Land drainage may be present which served the former canal wharf.

2.5 Flood Risk

A detailed flood risk assessment has been undertaken for the site by Fairhurst (Ref.2)

2.6 Landfilling and Soil Gas

The site has been subject to extensive historical built development, dating to the 1890's, together with an infilled Canal wharf. The former buildings on site have been cleared and the site is currently under concrete hard covers associated with former floor slabs on the site. There are a number of retained level changes at the site boundary. As such, the site is expected to be under a variable Made ground cover comprising building construction fill and Canal infill. The Made ground is unlikely to be a source of significant putrescible waste but would be expected to be a source of soil gas with low concentrations and emission rates.

The historical borehole records indicate the following made ground fill material which would be typical of the type of fill used within the site

- Made Ground, consisting of ash, cinders and stone.
- Made Ground recovered as a firm clayey sandy sandstone
- Stiff to very stiff sandy Clay
- There is no evidence of putrescible material but the made ground would be expected to be a source of soil gas with low concentrations and emission rates.

The envirocheck report indicates

- There are infilled (water) areas on site in the location of a historic canal.
- There are areas of potentially infilled land (water) located within 500m of the site.

2.7 Mining and Mineral Extraction

Information on mining and mineral extraction has been obtained and is summarised below.

Envirocheck Report

The Envirocheck Report (**Appendix B**) indicates;

- The site is in a coal mining affected area

- There are no BGS recorded mineral sites located on or within 250m of the site

Historical Plans

A review of the historical land use detailed in Section 2.2 indicates;

- The site historically comprised mainly of industrial units, chimneys, warehouses and garages.
- The footprint of the proposed development is on the existing car park.
- There is no evidence of mine workings or features associated with mine workings on the site.

Coal Authority Mining Report

A Consultant Coal Authority Mining Report was procured for the site in which the following key comments were noted. The Coal Authority Mining Report is included in **Appendix B**.

- Very low potential ground movement in this area.
- There are no geological faults, fissures or break lines recorded.
- There are no known coal mine entries in or within 500m of the site boundary
- There are no known shallow workings within the site boundary
- There is no record of mine gas emissions within 500m of the site boundary.

2.8 Radon

The maximum recorded radon potential at the site is considered to be less than 1%. However, the site is immediately adjacent to an area that contains a 1-3% radon potential. At this stage, it is considered that no radon protective measures are necessary for the construction of new dwellings, but it is recommended that further investigation be undertaken to confirm the radon classification for the entire site area.

2.9 Regulatory Review

2.9.1 Permits, Consents and Authorisations

Factors that could influence the environmental status of the site are detailed in the table below (Table 3). A full listing of these factors is contained in the Envirocheck Report datasheet (**Appendix B**).

Table 3. Regulatory Review

Feature	No. within 1km	Closest Distance from Site (m)	Details Closest to Site
Contemporary Trade Directory Entries	1	On site	Name: Marco Trading Co Ltd, Location: Marco House, Tariff Street, Manchester, M1 2FF, Classification: Clothing & Fabrics - Manufacturers

Registered Landfill Sites	0	N/A	Unknown
Registered Waste Transfer Sites	2	779 A18NW (N)	License holder: British Gas Plc; License reference: 00977 Location: Gould Street, Manchester, Greater Manchester License authority: Environment Agency - North West Region, South Area

2.9.3 Summary

The factors detailed in the tables above are unlikely to adversely influence the environmental status of the site.

2.10 Geo-environmental Hazards

A review of historical plans and data indicate the following hazards may be present on the site

- Potential for deep Made Ground associated with historical development and infilled canal wharf.
- Potential for shallow groundwater perched within the Made ground and Canal wharf infill.
- Soil gas associated with Made ground and Canal infill.
- Asbestos in soil matrix to Made ground and buried on site associated with clearance of former buildings.
- Soil and water contaminants associated with general made ground and historical land uses.

3.0 PRELIMINARY ENVIRONMENTAL RISK ASSESSMENT

3.1 Risk Assessment Methodology

In order to determine whether there are any potentially unacceptable risks to the site, a Conceptual Site Model has been developed and a Preliminary Environmental Risk Assessment has been undertaken in accordance with the Environment Agency document 'Land contamination risk management' guidance (Ref.3). The risk assessment has been undertaken taking into account the following:

- Current site used as a car park;
- Historical site as a Canal wharf , warehouse, furniture paint workings and garage;
- Adjacent warehouses and garages; and

The following sections provide a summary of the potential on- and off-site sources of contamination. Plausible pollutant linkages have been identified and are detailed in **Tables 5 and 6**.

3.2 Potential Sources of Contamination

On Site

A review of the historical plans dating back to 1893 indicate that the site historically has been predominantly industrial in land use and has comprised factory units, chimneys, wharfs, warehouses and garages, together with a Canal wharf. The Canal wharf was infilled in the 1940's with all buildings cleared by 1948. The site is currently under a concrete hard cover and is in use for car parking. A small derelict building is located in the north.

The following potential sources of contamination have been identified on site:

- **Made Ground:** Made Ground is expected to be present associated with general construction fill and the demolition of former buildings. Although these materials are unlikely to represent a significant source of contamination, localised and low level contamination may be present as metals, heavy metals, inorganics, sulphates, hydrocarbons, suspected PAH, asbestos and ground gas.
- **Historical land use as garage:** The site historically comprised of Hill service garage. This historical site use has the potential to be a source for hydrocarbon, PAH, heavy metal and solvent contamination.
- **Historical land use as paint works:** This historical site use has the potential to be a source for solvent contamination.
- **Historical land use as Warehouse sites:** This historical site use has the potential to be a site for hydrocarbon, PAH, heavy metal and solvent contamination.
- **Historical land use as furniture warehouse:** This historical site use has the potential to be a source of localised and low level contamination as metals, heavy

metals, inorganics, sulphates, hydrocarbons, spectated PAH, asbestos and ground gas.

- **Infilled canal wharf:** This historical site use has the potential to be a source of contamination as metals, heavy metals, inorganics, sulphates, hydrocarbons, spectated PAH, asbestos and ground gas.
- **Current land use as a Car Park:** Potential ground gases and hydrocarbons may be present at localised low concentrations associated with the current use of the development site as a car park.
- **Asbestos:** Given the age and nature of the former buildings on site, these are expected to have contained Asbestos containing materials (ACM's) and the presence of asbestos, buried on site or within the Made Ground soil fabric, cannot be discounted.
- **Ground Gas:** Potential ground gases and hydrocarbons may be present at low concentrations and emission rates associated with general made ground, canal infill material and specific historical land uses on site
- **Fly Tipped Material:** Localised fly tipped material may be present which cannot be discounted.

Adjacent Land

The adjacent land historically comprised mainly of industrial sites, chimneys, warehouses and garages. The following potential sources of contamination have been identified on adjacent land:

- **Made Ground:** Made Ground is expected to be present and would be expected to comprise of typical industrial materials including materials from demolition of former units. Although these materials are unlikely to represent a significant source of contamination, localised and low level contamination may be present as metals, heavy metals, inorganics, sulphates, hydrocarbons, spectate PAH, asbestos and ground gas.
- **Historical land use as warehouses/chimneys:** This historical use has the potential to be a source for fly tipping and hydrocarbon contamination.
- **Historical land use as garage:** This historical site use has the potential to be a site for hydrocarbon, PAH, heavy metal and solvent contamination.
- **Historical land use as industrial sites:** This historical site use has the potential to be a site for hydrocarbon, PAH, heavy metal and solvent contamination.
- **Current land use as a Car Park:** Potential ground gases and hydrocarbons may be present at localised low concentrations associated with the current use as a car park.

- **Asbestos:** in view of the extensive historical land use asbestos may be buried on site or be present within the Made Ground soil fabric
- **Ground Gas:** Potential ground gases and hydrocarbons may be present at low concentrations and emission rates associated with the historic garage.
- **Fly Tipped Material:** Localised fly tipped material may be present which cannot be discounted.

3.3 Pathways

A pathway is defined as a mechanism or route by which a contaminant comes into contact with or otherwise affects a receptor. Pathways by which receptors may be impacted on in the context of the current and historical site uses:

- Ingestion;
- Inhalation;
- Dermal contact;
- Direct contact;
- Migration/leaching of mobile contaminants;
- Migration/accumulation of combustible contaminants;
- Construction pathways; and
- Direct contact and root uptake

3.4 Receptors

3.4.1 Human Health

Receptors that are potentially at risk include:

- Future site users;
- Construction workers; and
- Adjacent land users.

3.4.2 Built Environment

Receptors that are potentially at risk include:

- Buried structures and services; and
- Future buildings and installations.

3.4.3 *Controlled Waters*

Receptors that are potentially at risk include:

- Groundwater; and
- Surface water.

3.4.4 *Ecological*

Receptors that are potentially at risk include:

- Future areas of soft landscaping.
- Canal watercourse

3.5 Conceptual Site Model

Plausible pollutant linkages have been identified and are detailed in the tables below (**Tables 5 and 6**). This outlines the level of risk associated with the potential sources of contamination detailed above. The risk classification matrix is included in **Appendix C**. This is taken from CIRIA C552 'Contaminated land risk assessment: A guide to good practice' (Ref. 2) and provides a consistent basis for decision making.

Table 5 presents the plausible pathways and risks associated with the proposed Block 1 (the block to the north of the site) residential building with Table 6 presenting the pathways and risk for the proposed Block 2 (the block to the south of the site) residential building.

Table 5. Summary of Plausible Source – Pathway – Receptor Pollutant Linkages – On Site Sources (Block 1)

Source	Pathway	Receptor	Con.	Prob.	Risk
Historical land use as infilled Canal	Ingestion, inhalation, dermal contact, direct contact	Future site users	Mr	UI	L
		Construction workers	Mr	UI	L
		Adjacent land users	Md	UI	L
	Direct contact	Buried structures and services	Md	UI	L
	Migration/leaching of mobile contaminants	Groundwater	Md	UI	L
Made Ground	Ingestion, inhalation, dermal contact, direct contact	Future site users	Mr	UI	VL
		Construction workers	Mi	Li	M
		Adjacent land users	Mi	UI	VL
	Direct contact	Buried structures and services	Mi	UI	VL
	Migration/leaching of mobile contaminants	Groundwater	Mi	UI	VL
		Surface water	Mi	UI	VL
Historical land uses as: Garage, Paint works,	Ingestion, inhalation, dermal contact, direct contact	Future site users	Mr	UI	VL
		Construction workers	Md	Li	M/L

Source	Pathway	Receptor	Con.	Prob.	Risk
Furniture warehouse		Adjacent land users	Mr	UI	VL
	Direct contact	Buried structures and services	Mr	UI	VL
	Migration/leaching of mobile contaminants	Groundwater	Mi	UI	VL
		Surface water	Mi	UI	VL
Current land use as a Car Park:	Ingestion, inhalation, dermal contact, direct contact	Future site users	Md	UI	L
		Construction workers	Md	UI	L
		Adjacent land users	Md	UI	L
	Direct contact	Buried structures and services	Md	UI	L
	Migration/leaching of mobile contaminants	Groundwater	Md	UI	L
		Surface water	Md	UI	L
Asbestos (buried onsite or within the Made ground soil fabric)	Ingestion, inhalation, dermal contact, direct contact	Future site users	Sv	Lw	M
		Construction workers	Sv	Hi	VH
Ground Gas (General Made ground and canal infill)	Inhalation	Future site users	Md	UI	L
		Construction workers	Md	Lw	H
		Adjacent land users	Md	UI	L
Fly Tipped Material	Dermal contact	Future site users	Mr	UI	VL
		Construction workers	Mr	UI	VL
		Adjacent land users	Mr	UI	VL

Where Con. = Consequence and Prob. = Probability. Consequence: Sv – Severe, Md = Medium, Mi = Mild, Mr = Minor. Probability: Hi = High Likelihood, Li = Likely, Lw = Low Likelihood, UI = Unlikely. Risk: VH = Very High, H = High, M = Moderate, M/L = Moderate/Low, L = Low, VL = Very Low

The following preliminary assessment of environmental risk has been made for Block 1(the block to the north of the site):

- Made Ground is expected to be present and would be expected to comprise of typical industrial materials including materials from demolition of former units. There is also the presence of remains associated with the infilling of the Canal. The risk to future site users is considered to be **Very Low**. The risk to construction workers is considered to be **Moderate**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- This historical land uses have the potential to be a source of contamination. The risk to future site users is considered to be **Very Low** and the risk to construction workers is considered to be **Moderate/Low**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- The infilled Canal wharf may include increased levels of contaminants compared with the general made ground but these are unlikely to preclude development, the risk to future site users is considered to be **Low**. The risk to construction workers is considered to be **Moderate/Low**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- The former historical buildings which were constructed prior to 2000 are expected to have contained Asbestos Containing Materials. As such, asbestos buried on site or found within the Made Ground soil fabric cannot be discounted. The risk to future site users is considered to be **Moderate**. The risk to construction workers is **Very High**. In order to reduce this level of risk to low. The disposal of surplus arising with asbestos contaminants also attract higher disposal costs to landfill. Construction workers must adopt appropriate health and safety measures and PPE during works. This is also likely to attract higher disposal costs to landfill
- Ground gas may be present associated with the pre-existing garage and Made Ground. Potential ground gases and hydrocarbons may also be present at low concentrations and emission rates associated with the current use of the development site as a car park. The risk to future site users is considered to be **Low**. The risk to construction workers is considered to be **High**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- Made Ground materials and general contaminants, or asbestos are likely to attract higher disposal costs to landfill

Table 6. Summary of Plausible Source – Pathway – Receptor Pollutant Linkages – On Site Sources (Block 2)

Source	Pathway	Receptor	Con.	Prob.	Risk
Made Ground-	Ingestion, dermal contact, direct contact	Future site users	Mr	UI	VL
		Construction workers	Mi	Li	M
		Adjacent land users	Mi	UI	VL
	Direct contact	Buried structures and services	Mi	UI	L
	Migration/leaching of mobile contaminants	Groundwater	Mi	UI	VL
		Surface water	Mi	UI	VL
Historical Land uses as: Garage, Paint works, Furniture, warehouse	Ingestion, dermal contact, direct contact	Future site users	Mr	UI	VL
		Construction workers	Md	Li	M/L
		Adjacent land users	Mr	UI	VL
	Direct contact	Buried structures and services	Mr	UI	VL
	Migration/leaching of mobile contaminants	Groundwater	Mi	UI	VL
		Surface water	Mi	UI	VL
Current land use as a Car Park:	Ingestion, dermal contact, direct contact	Future site users	Md	UI	L
		Construction workers	Md	UI	L
		Adjacent land users	Md	UI	L
	Direct contact	Buried structures and services	Md	UI	L
	Migration/leaching of mobile contaminants	Groundwater	Md	UI	L
		Surface water	Md	UI	L
Asbestos (buried onsite or within the Made	Ingestion, dermal contact, direct contact	Future site users	Sv	Lw	M
		Construction workers	Sv	Hi	VH

Source	Pathway	Receptor	Con.	Prob.	Risk
ground soil fabric)					
Ground Gas (General Made ground)	Inhalation	Future site users	Md	UI	L
		Construction workers	Md	Lw	H
		Adjacent land users	Md	UI	L
Fly Tipped Material	Dermal contact	Future site users	Mr	UI	VL
		Construction workers	Mr	UI	VL
		Adjacent land users	Mr	UI	VL

Where Con. = Consequence and Prob. = Probability.

Consequence: Sv – Severe, Md = Medium, Mi = Mild, Mr = Minor.

Probability: Hi = High Likelihood, Li = Likely, Lw = Low Likelihood, UI = Unlikely.

Risk: VH = Very High, H = High, M = Moderate, M/L = Moderate/Low, L = Low, VL = Very Low.

The following preliminary assessment of environmental risk has been made for Block 2 (the block to the south of the site);

- Made Ground is expected to be present and would be expected to comprise of typical construction fill materials including materials from demolition of former buildings. The risk to future site users is considered to be **Very Low**. The risk to construction workers is considered to be **Moderate**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- This historical land uses have the potential to be a source of contamination. The risk to future site users is considered to be **Very Low** and the risk to construction workers is considered to be **Moderate/Low**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- The former historical buildings which were constructed prior to 2000 are expected to have contained Asbestos Containing Materials. As such, asbestos buried on site or found within the Made Ground soil fabric cannot be discounted. The risk to future site users is considered to be **Moderate**. The risk to construction workers is **Very High**. In order to reduce this level of risk to low. The disposal of surplus arising with asbestos contaminants also attract higher disposal costs to landfill. Construction workers must adopt appropriate health and safety measures and PPE during works. This is also likely to attract higher disposal costs to landfill
- Ground gas may be present associated with the pre-existing garage and Made Ground. Potential ground gases and hydrocarbons may also be present at low concentrations and emission rates associated with the current use of the

development site as a car park. The risk to future site users is considered to be **Low**. The risk to construction workers is considered to be **High**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.

- Made Ground materials and general contaminants, or asbestos are likely to attract higher disposal costs to landfill

4.0 GEOTECHNICAL HAZARDS AND CONSTRAINTS

The following potential geotechnical hazards and constraints have been identified on two parts of the site:

Block 1(the block to the north of the site).

- Made Ground is anticipated across the site and would likely comprise of construction fill associated with the former development, waste from historical demolition.
- Deeper made ground is expected associated with the infill canal wharf
- Although the depth of Made Ground deposits has not been proven, this is likely to be variable and there is potential for variable soft/weak spots across the site;
- Where deep Made Ground is present beneath the area of the proposed building, ground instability may occur;
- Shallow ground water perched within the made ground may be present on site. Perched ground water may be in continuity with the adjacent canal via the infilled canal wharf
- The site has been subject to development from the 1890's and although this has been cleared the presence of asbestos buried on site or within the soil matrix cannot be discounted.
- The site has included a number of historical land uses including garage, paint works and warehouses. General soil and water contaminants may be present associated with the general made ground, and specific areas of former land use or buried historical features
- Ground gas may be present associated with the Made Ground and infilled canal wharf. In addition, potential ground gases and hydrocarbons may be present at low concentrations and emission rates associated with the historic servicing garage on site
- There is Potential for aggressive ground for concrete due to the potential contaminants from previous industrial use;
- There is a risk of possible variation in shear strength of the Till deposits which may arise due to the varied densities and composition of these materials; and
- Localised fly tipped material may be present which cannot be discounted;

- Attention should be given to the type of trees planted on the proposed plan, as water demanding trees may cause swelling on the clay in the site;
- There are a number of boundary and retaining walls on site. These may be party walls
- The on-site derelict building, which is to be removed as part of the development, is understood to provide some structural support to the adjacent Sam's Yard building which will be retained by the adjacent land owner. Structural support works will be required to facilitate removal of the on-site derelict building
- If asbestos or general contaminants or features are encountered during the works then this will require removal by a specialist contractor; this is also likely to attract higher disposal costs to landfill;
- Private and statutory services may be present on site which may include a land drainage feature within the infilled canal wharf

Block 2 (the block to the south of the site).

- Made Ground is anticipated across the site and would likely comprise of construction fill associated with the former development, waste from historical demolition.
- Although the depth of Made Ground deposits has not been proven, this is likely to be variable and there is potential for variable soft/weak spots across the site;
- Where deep Made Ground is present beneath the area of the proposed building, ground instability may occur;
- Shallow ground water perched within the made ground may be present on site.
- The site has been subject to development from the 1890's and although this has been cleared the presence of asbestos buried on site or within the soil matrix cannot be discounted.
- The site has included a number of historical land uses including garage, paint works and warehouses. General soil and water contaminants may be present associated with the general made ground, and specific areas of former land use or buried historical features
- Ground gas may be present associated with the Made Ground. In addition, potential ground gases and hydrocarbons may be present at low concentrations and emission rates associated with the historic servicing garage on site
- There is Potential for aggressive ground for concrete due to the potential contaminants from previous industrial use;
- There is a risk of possible variation in shear strength of the Till deposits which may arise due to the varied densities and composition of these materials; and
- Localised fly tipped material may be present which cannot be discounted;
- Attention should be given to the type of trees planted on the proposed plan, as water demanding trees may cause swelling on the clay in the site;
- There are a number of boundary and retaining walls on site and to the perimeter of block 1. These may be party walls.

- If asbestos or general contaminants or features are encountered during the works then this will require removal by a specialist contractor; this is also likely to attract higher disposal costs to landfill;
- Private and statutory services may be present on site which may include a land drainage feature within the infilled canal wharf

5.0 CONCLUSIONS AND RECOMMENDATIONS

In order to determine whether there are any potentially unacceptable risks to the site, a Conceptual Site Model has been developed and a Preliminary Environmental Risk Assessment undertaken in accordance with the Environment Agency document 'Land contamination risk management' (Ref. 3). The risk assessment has been undertaken taking into account the following;

- Current site used as a car park;
- Historical site as warehouse, paint workings and garage;
- Historical site use as a canal wharf in the northern part of the site
- Adjacent warehouses and garages; and

Block 1

The following preliminary assessment of environmental risks have been carried out for Block 1(the block to the north of the site):

- Made Ground is expected to be present and would be expected to comprise of typical industrial materials including materials from demolition of former units. There is also the presence of remains associated with the infilling of the Canal. The risk to future site users is considered to be **Very Low**. The risk to construction workers is considered to be **Moderate**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- This historical land uses have the potential to be a source of contamination. The risk to future site users is considered to be **Very Low** and the risk to construction workers is considered to be **Moderate/Low**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- The infilled Canal wharf may include increased levels of contaminants compared with the general made ground but these are unlikely to preclude development, the risk to future site users is considered to be **Low**. The risk to construction workers is considered to be **Moderate/Low**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- The former historical buildings which were constructed prior to 2000 are expected to have contained Asbestos Containing Materials. As such, asbestos buried on site or found within the Made Ground soil fabric cannot be discounted. The risk to future site users is considered to be **Moderate**. The risk to construction workers is **Very High**. In order to reduce this level of risk to low. The disposal of surplus arising with asbestos contaminants also attract higher disposal costs to landfill. Construction workers must adopt appropriate health and safety measures and PPE during works. This is also likely to attract higher disposal costs to landfill
- Ground gas may be present associated with the pre-existing garage and Made Ground. Potential ground gases and hydrocarbons may also be present at low concentrations and emission rates associated with the current use of the

development site as a car park. The risk to future site users is considered to be **Low**. The risk to construction workers is considered to be **High**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.

- Made Ground materials and general contaminants, or asbestos are likely to attract higher disposal costs to landfill

The following potential geotechnical hazards and constraints have been identified on Block 1(the block to the north of the site):

- Made Ground is anticipated across the site and would likely comprise of construction fill associated with the former development, waste from historical demolition.
- Deeper made ground is expected associated with the infill canal wharf
- Although the depth of Made Ground deposits has not been proven, this is likely to be variable and there is potential for variable soft/weak spots across the site;
- Where deep Made Ground is present beneath the area of the proposed building, ground instability may occur;
- Shallow ground water perched within the made ground may be present on site. Perched ground water may be in continuity with the adjacent canal via the infilled canal wharf
- The site has been subject to development from the 1890's and although this has been cleared the presence of asbestos buried on site or within the soil matrix cannot be discounted.
- The site has included a number of historical land uses including garage, paint works and warehouses. General soil and water contaminants may be present associated with the general made ground, and specific areas of former land use or buried historical features
- Ground gas may be present associated with the Made Ground and infilled canal wharf. In addition, potential ground gases and hydrocarbons may be present at low concentrations and emission rates associated with the historic servicing garage on site
- There is Potential for aggressive ground for concrete due to the potential contaminants from previous industrial use;
- There is a risk of possible variation in shear strength of the Till deposits which may arise due to the varied densities and composition of these materials; and
- Localised fly tipped material may be present which cannot be discounted;
- Attention should be given to the type of trees planted on the proposed plan, as water demanding trees may cause swelling on the clay in the site;

- There are a number of boundary and retaining walls on site. These may be party walls
- The on-site derelict building, which is to be removed as part of the development, is understood to provide some structural support to the adjacent Sam's Yard building which will be retained by the adjacent land owner. Structural support works will be required to facilitate removal of the on-site derelict building
- If asbestos or general contaminants or features are encountered during the works then this will require removal by a specialist contractor; this is also likely to attract higher disposal costs to landfill;
- Private and statutory services may be present on site which may include a land drainage feature within the infilled canal wharf

Block 2

The following preliminary assessment of environmental risks have been carried out on Block 2(the block to the south of the site):

- Made Ground is expected to be present and would be expected to comprise of typical construction fill materials including materials from demolition of former buildings. The risk to future site users is considered to be **Very Low**. The risk to construction workers is considered to be **Moderate**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- This historical land uses have the potential to be a source of contamination. The risk to future site users is considered to be **Very Low** and the risk to construction workers is considered to be **Moderate/Low**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- The former historical buildings which were constructed prior to 2000 are expected to have contained Asbestos Containing Materials. As such, asbestos buried on site or found within the Made Ground soil fabric cannot be discounted. The risk to future site users is considered to be **Moderate**. The risk to construction workers is **Very High**. In order to reduce this level of risk to low. The disposal of surplus arising with asbestos contaminants also attract higher disposal costs to landfill. Construction workers must adopt appropriate health and safety measures and PPE during works. This is also likely to attract higher disposal costs to landfill
- Ground gas may be present associated with the pre-existing garage and Made Ground. Potential ground gases and hydrocarbons may also be present at low concentrations and emission rates associated with the current use of the development site as a car park. The risk to future site users is considered to be **Low**. The risk to construction workers is considered to be **High**. In order to reduce this level of risk to low, construction workers must adopt appropriate health and safety measures and PPE during works.
- Made Ground materials and general contaminants, or asbestos are likely to attract higher disposal costs to landfill

The following potential geotechnical hazards and constraints have been identified on Block 2 (the block to the south of the site):

- Made Ground is anticipated across the site and would likely comprise of construction fill associated with the former development, waste from historical demolition.
- Although the depth of Made Ground deposits has not been proven, this is likely to be variable and there is potential for variable soft/weak spots across the site;
- Where deep Made Ground is present beneath the area of the proposed building, ground instability may occur;
- Shallow ground water perched within the made ground may be present on site.
- The site has been subject to development from the 1890's and although this has been cleared the presence of asbestos buried on site or within the soil matrix cannot be discounted.
- The site has included a number of historical land uses including garage, paint works and warehouses. General soil and water contaminants may be present associated with the general made ground, and specific areas of former land use or buried historical features
- Ground gas may be present associated with the Made Ground. In addition, potential ground gases and hydrocarbons may be present at low concentrations and emission rates associated with the historic servicing garage on site
- There is Potential for aggressive ground for concrete due to the potential contaminants from previous industrial use;
- There is a risk of possible variation in shear strength of the Till deposits which may arise due to the varied densities and composition of these materials; and
- Localised fly tipped material may be present which cannot be discounted;
- Attention should be given to the type of trees planted on the proposed plan, as water demanding trees may cause swelling on the clay in the site;
- There are a number of boundary and retaining walls on site and to the perimeter of block 1. These may be party walls
- If asbestos or general contaminants or features are encountered during the works then this will require removal by a specialist contractor; this is also likely to attract higher disposal costs to landfill;
- Private and statutory services may be present on site which may include a land drainage feature within the infilled canal wharf

In view of the information provided above, the site is not expected to be subject to statutory liability or registered as Contaminated Land under Part 2A of the Environmental Protection Act 1990.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Historical Building Plans Information

This data set contains potentially contaminative features such as asbestos, petrol, oil and tanks captured from Historical Building Plans. The Historical Building Plans were produced by the London-based firm Charles E. Goad Ltd. as fire insurance plans, dating back to 1885. The firm ceased production of fire insurance plans in 1970. Most of the important towns and cities of the British Isles are covered. Historical Building Plans are usually at the scales of 1:480 (1 inch to 40 feet) for the British Isles. They were updated every 5-6 years by means of revision sheets designed to be pasted on to the original plans.

It should be noted that Historical Building Plans are only available for certain major towns and cities and in some cases there may only be partial coverage of the search area. It cannot therefore be assumed that the absence of responses under the Historical Building Plans section of this report indicates that no hazards exist. Please check the Historical Building Plans Map List table in the Historical Map List section of this report to establish if Historical Building Plans are available for this search area.

Historical Land Use Information

Landmark's Historical Land Use Data is the result of combined analysis of historical map data captured at 1:10,560 and 1:10,000. A unique comprehensive database of Historic Land Use from the 1840's to 1996 it includes 67 different types of potentially contaminated past industrial land use. This entailed analysing over 60,000 maps and is drawn from at least four, and up to six historical map editions. In addition a seventh layer was also created, known as the land use layer, containing areas of infilled land which are plotted via comparison between two or more map editions.

Historical Tanks and Energy Facilities

In addition to HLU, additional analysis uncovered some of the most dangerous sources of contamination (past and present tanks, petrol storage, oil, gas, electricity, miscellaneous facilities). This data set covers over 390,000 Historical Tanks and Energy facilities in Great Britain and was captured from post war 1:2500 and 1:1250 Ordnance Survey historical mapping covering a period from 1943 to 1996.

FAIRHURST

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

FAIRHURST

Manchester

Published 1975

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

FAIRHURST

Ordnance Survey Plan
Published 1989
Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

FAIRHURST

Lancashire And Furness

Published 1850 - 1851

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

FAIRHURST

Lancashire And Furness

Published 1891

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Additional SIMs

Published 1978 - 1985

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Ordnance Survey Plan

Published 1988

Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Useful Contacts and Further Information	16

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Historical Building Plans Information

This data set contains potentially contaminative features such as asbestos, petrol, oil and tanks captured from Historical Building Plans. The Historical Building Plans were produced by the London-based firm Charles E. Goad Ltd. as fire insurance plans, dating back to 1885. The firm ceased production of fire insurance plans in 1970. Most of the important towns and cities of the British Isles are covered. Historical Building Plans are usually at the scales of 1:480 (1 inch to 40 feet) for the British Isles. They were updated every 5-6 years by means of revision sheets designed to be pasted on to the original plans.

It should be noted that Historical Building Plans are only available for certain major towns and cities and in some cases there may only be partial coverage of the search area. It cannot therefore be assumed that the absence of responses under the Historical Building Plans section of this report indicates that no hazards exist. Please check the Historical Building Plans Map List table in the Historical Map List section of this report to establish if Historical Building Plans are available for this search area.

Historical Land Use Information

Landmark's Historical Land Use Data is the result of combined analysis of historical map data captured at 1:10,560 and 1:10,000. A unique comprehensive database of Historic Land Use from the 1840's to 1996 it includes 67 different types of potentially contaminated past industrial land use. This entailed analysing over 60,000 maps and is drawn from at least four, and up to six historical map editions. In addition a seventh layer was also created, known as the land use layer, containing areas of infilled land which are plotted via comparison between two or more map editions.

Historical Tanks and Energy Facilities

In addition to HLU, additional analysis uncovered some of the most dangerous sources of contamination (past and present tanks, petrol storage, oil, gas, electricity, miscellaneous facilities). This data set covers over 390,000 Historical Tanks and Energy facilities in Great Britain and was captured from post war 1:2500 and 1:1250 Ordnance Survey historical mapping covering a period from 1943 to 1996.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Report Version v53.0

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Agency & Hydrological					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes	Yes	n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 1			6	92
Prosecutions Relating to Controlled Waters			n/a	n/a	n/a
Enforcement and Prohibition Notices					
Integrated Pollution Controls					
Integrated Pollution Prevention And Control					
Local Authority Integrated Pollution Prevention And Control					
Local Authority Pollution Prevention and Controls	pg 25			8	7
Local Authority Pollution Prevention and Control Enforcements	pg 27			2	
Nearest Surface Water Feature	pg 28		Yes		
Pollution Incidents to Controlled Waters	pg 28		3	4	23
Prosecutions Relating to Authorised Processes					
Registered Radioactive Substances	pg 33				10
River Quality	pg 34		4		3
River Quality Biology Sampling Points					
River Quality Chemistry Sampling Points	pg 36				1
Substantiated Pollution Incident Register	pg 36				2
Water Abstractions	pg 37				5 (*53)
Water Industry Act Referrals					
Groundwater Vulnerability Map	pg 51	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk			n/a	n/a	n/a
Groundwater Vulnerability - Local Information			n/a	n/a	n/a
Bedrock Aquifer Designations	pg 51	Yes	n/a	n/a	n/a
Superficial Aquifer Designations	pg 51	Yes	n/a	n/a	n/a
Source Protection Zones					
Extreme Flooding from Rivers or Sea without Defences				n/a	n/a
Flooding from Rivers or Sea without Defences				n/a	n/a
Areas Benefiting from Flood Defences				n/a	n/a
Flood Water Storage Areas				n/a	n/a
Flood Defences				n/a	n/a
OS Water Network Lines	pg 52		9	17	34

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Waste					
BGS Recorded Landfill Sites					
Historical Landfill Sites	pg 59				1
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)					
Licensed Waste Management Facilities (Locations)	pg 59			1	6
Local Authority Landfill Coverage		1	n/a	n/a	n/a
Local Authority Recorded Landfill Sites					
Potentially Infilled Land (Non-Water)	pg 60				1
Potentially Infilled Land (Water)	pg 60	1	5	12	14
Registered Landfill Sites					
Registered Waste Transfer Sites	pg 62				2
Registered Waste Treatment or Disposal Sites	pg 63				2
Hazardous Substances					
Control of Major Accident Hazards Sites (COMAH)					
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)					
Planning Hazardous Substance Consents					
Planning Hazardous Substance Enforcements					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Geological					
BGS 1:625,000 Solid Geology	pg 65	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry	pg 65	Yes		Yes	Yes
BGS Recorded Mineral Sites					
BGS Urban Soil Chemistry	pg 67		Yes	Yes	Yes
BGS Urban Soil Chemistry Averages	pg 70	Yes			
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas	pg 70	Yes	n/a	n/a	n/a
Mining Instability	pg 70	Yes	n/a	n/a	n/a
Man-Made Mining Cavities					
Natural Cavities					
Non Coal Mining Areas of Great Britain				n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 70	Yes	Yes	n/a	n/a
Potential for Compressible Ground Stability Hazards				n/a	n/a
Potential for Ground Dissolution Stability Hazards				n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 71	Yes	Yes	n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 71	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 71	Yes	Yes	n/a	n/a
Radon Potential - Radon Affected Areas			n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
Industrial Land Use					
Contemporary Trade Directory Entries	pg 72	1	108	173	397
Fuel Station Entries	pg 130		1		3
Points of Interest - Commercial Services	pg 130	1	10	14	69
Points of Interest - Education and Health	pg 138			1	
Points of Interest - Manufacturing and Production	pg 138		11	37	117
Points of Interest - Public Infrastructure	pg 152		2	7	29
Points of Interest - Recreational and Environmental	pg 155				7
Gas Pipelines					
Underground Electrical Cables					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Sensitive Land Use					
Ancient Woodland					
Areas of Adopted Green Belt					
Areas of Unadopted Green Belt					
Areas of Outstanding Natural Beauty					
Environmentally Sensitive Areas					
Forest Parks					
Local Nature Reserves					
Marine Nature Reserves					
National Nature Reserves					
National Parks					
Nitrate Sensitive Areas					
Nitrate Vulnerable Zones	pg 156		1		
Ramsar Sites					
Sites of Special Scientific Interest					
Special Areas of Conservation					
Special Protection Areas					
World Heritage Sites

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Geology 1:50,000 Maps Coverage

FAIRHURST

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

FAIRHURST

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Report Section and Details	Page Number
Summary	-
The Summary section provides an overview of the data contained within the report, detailing the number of data set features or the existence of a data set in relation to the buffer selected. For ease of reference, the report is broken down into 4 sections of data; Mining and Natural Cavities Data, Historical Land Use Information (1:2,500), Historical Land Use Information (1:10,000) and Ground Stability Data (1:50,000).	
Mining and Natural Cavities Data	1
The Mining and Natural Cavities Data section features data sets related to the existence of mining areas and their potential hazards; and details of naturally formed cavities. Data sets within this section are not plotted, with the exception of BGS Recorded Mineral Sites and Potential Mining Areas which feature on the Historical Land Use Information (1:10,000) map.	
Historical Land Use Information (1:2,500)	2
The Historical Land Use Information (1:2,500) section contains data captured from analysis carried out by Landmark of 1:1,250 and 1:2,500 scale historical Ordnance Survey mapping, identifying areas where, historically, the land uses were potentially contaminative. For the purpose of this Envirocheck module, only historical data relating to mining and ground stability has been included and plotted on the corresponding Historical Land Use Information (1:2,500) map. This section also includes the Subterranean Features data set, which details various man-made and man-used underground spaces obtained from the Subterranea Britannica society.	
Historical Land Use Information (1:10,000)	5
The Historical Land Use (1:10,000) section covers data captured from the systematic analysis carried out by Landmark of 1:10, 560 and 1:10,000 scale historical Ordnance Survey mapping dating back to the mid-19th century, identifying potentially contaminative past industrial land uses. For the purpose of this Envirocheck module, only data relating to mining and ground stability has been included and plotted on the accompanying Historical Land Use Information (1:10,000) map.	
Ground Stability Data (1:50,000)	7
The Ground Stability (1:50,000) section includes the BGS Geosure data suite, reporting features to 250m and plotted onto 3 separate maps. Also reported is brine subsidence, brine mining and salt mining data sets, of which Brine Pumping and Salt Mining Related Features are plotted, and subsidence insurance claims and insurance investigations data, which is not plotted.	
Historical Map List	8
The Historical Map List section details the historical mapping that has been analysed for your site, in relation to the Historical Land Use Information sections.

Extractive Industries or Potential Excavations from 1893-1915 (100m)	pg 2	2	8	n/a	n/a
Extractive Industries or Potential Excavations from 1906-1937 (100m)	pg 3	2	8	n/a	n/a
Extractive Industries or Potential Excavations from 1924-1949 (100m)				n/a	n/a
Extractive Industries or Potential Excavations from 1950-1980 (100m)	pg 4		4	n/a	n/a
Subterranean Features (100m)				n/a	n/a
Historical Land Use Information (1:10,000)					
Air Shafts					
Disturbed Ground					
General Quarrying					
Heap, unknown constituents					
Mineral Railway					
Mining & quarrying general					
Mining of coal & lignite					
Quarrying of sand & clay, operation of sand & gravel pits					
Former Marshes					
Potentially Infilled Land (Non-Water)	pg 5				1
Potentially Infilled Land (Water)	pg 5	1	5	12	14
Ground Stability Data (1:50,000)					
CBSCB Compensation District			n/a	n/a	n/a
Brine Pumping Related Features					
Brine Subsidence Solution Area					
Potential for Collapsible Ground Stability Hazards	pg 7	Yes	Yes	n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 7	Yes	Yes	n/a	n/a
Potential for Ground Dissolution Stability Hazards	pg 7	Yes	Yes	n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 7	Yes	Yes	n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 7	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 7	Yes	Yes	n/a	n/a
Salt Mining Related Features					

Report Version v53.0

Map ID	Details	Quadrant Reference (Compass Direction)	Estimated Distance From Site	Contact	NGR
	Coal Mining Affected Areas Description: In an area which may be affected by coal mining activity. It is recommended that a coal mining report is obtained from the Coal Authority. Contact details are included in the Useful Contacts section of this report.	A13SW (SE)	0	1	384788 398383
	Mining Instability Mining Evidence: Inconclusive Coal Mining Source: Ove Arup & Partners Boundary Quality: As Supplied	A13SW (SE)	0	2	384788 398383
	Non Coal Mining Areas of Great Britain No Hazard				
1	Potential Mining Areas Name: Bradford and Clayton Ceased Operation: 1891 Commodity: Coal; Four Foot Reference: 2655 Alternate: Forge Name/Mine: Custodian: Not Supplied	A14SW (E)	390	4	385241 398379
2	Potential Mining Areas Name: Bradford Ceased Operation: 1891 Commodity: Coal; Three Quarters; Four Feet Reference: 2636 Alternate: Not Supplied Name/Mine: Custodian: Not Supplied	A14SW (E)	399	4	385241 398292
3	Potential Mining Areas Name: Bradford Ceased Operation: 1935 Commodity: Coal; Parket Reference: 11471 Alternate: Not Supplied Name/Mine: Custodian: Not Supplied	A18NE (N)	676	4	384846 399099
4	Potential Mining Areas Name: Ardwick Ceased Operation: 1888 Commodity: Limestone; Great Reference: 3963 Alternate: Not Supplied Name/Mine: Custodian: Not Supplied	A14SE (E)	796	4	385643 398288

33	Extractive Industries or Potential Excavations from 1950-1980 Use: Rochdale Canal First Map Published 1948 Date: Last Map Published 1951 Date:	A13SE (E)	29	-	384881 398380
34	Extractive Industries or Potential Excavations from 1950-1980 Use: Lock First Map Published 1948 Date: Last Map Published 1951 Date:	A13SE (SE)	35	-	384872 398345
35	Extractive Industries or Potential Excavations from 1950-1980 Use: Rochdale Canal First Map Published 1948 Date: Last Map Published 1951 Date:	A13SE (S)	39	-	384809 398332
36	Extractive Industries or Potential Excavations from 1950-1980 Use: Dale Street Wharf First Map Published 1948 Date: Last Map Published 1951 Date:	A13SE (S)	45	-	384798 398320

Map ID	Details	Quadrant Reference (Compass Direction)	Estimated Distance From Site	Contact	NGR
37	Potentially Infilled Land (Non-Water) Use: Unknown Filled Ground (Pit, quarry etc) Date of Mapping: 1993	A14NE (E)	971	-	385793 398617
38	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A13NW (NW)	0	-	384784 398392
39	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A13NE (NE)	29	-	384851 398421
40	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A13SE (SE)	63	-	384826 398301
41	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A13NE (E)	63	-	384915 398387
42	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A13SE (E)	117	-	384966 398354
43	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1909	A13SE (E)	120	-	384965 398341
44	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1909	A13NE (E)	281	-	385121 398460
45	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A14NW (E)	301	-	385135 398482
46	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1894	A14NW (E)	307	-	385139 398485
47	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A13NE (NE)	319	-	385100 398580
48	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A13SE (SE)	360	-	385063 398085
49	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A14NW (NE)	361	-	385173 398545
50	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A13SE (SE)	364	-	385116 398129
51	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A14SW (SE)	383	-	385172 398168
52	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A18SE (NE)	386	-	385039 398724
53	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A8NW (SW)	399	-	384499 398038
54	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A14SW (E)	418	-	385269 398351
55	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A8NW (SW)	493	-	384489 397930
56	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A14SW (E)	530	-	385381 398361
57	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A14SW (E)	535	-	385357 398203

Map ID	Details	Quadrant Reference (Compass Direction)	Estimated Distance From Site	Contact	NGR
58	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A19SW (NE)	558	-	385208 398812
59	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A14SW (E)	569	-	385419 398336
60	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A19SW (NE)	586	-	385288 398769
61	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A19SW (NE)	628	-	385207 398902
62	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A8SW (S)	696	-	384624 397663
63	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1894	A18NW (N)	743	-	384558 399132
64	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A7NE (SW)	816	-	384136 397812
65	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A7NE (SW)	827	-	384134 397798
66	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A19SE (NE)	830	-	385497 398902
67	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A8SW (S)	833	-	384779 397515
68	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A8SE (S)	858	-	384836 397493
69	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A7NW (SW)	877	-	384046 397827

Ordnance Survey Licence number: 100020315

Section 1 – Mining activity and geology

Past underground mining

No past mining recorded.

Probable unrecorded shallow workings

None.

Spine roadways at shallow depth

No spine roadway recorded at shallow depth.

Mine entries

None recorded within 100 metres of the enquiry boundary.

Abandoned mine plan catalogue numbers

None available.

Outcrops

No outcrops recorded.

Geological faults, fissures and breaklines

No faults, fissures or breaklines recorded.

Opencast mines

None recorded within 500 metres of the enquiry boundary.

Coal Authority managed tips

None recorded within 500 metres of the enquiry boundary.

Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

Site investigations

None recorded within 50 metres of the enquiry boundary.

Remediated sites

None recorded within 50 metres of the enquiry boundary.

Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

None recorded within 500 metres of the enquiry boundary.

Mine water treatment schemes

None recorded within 500 metres of the enquiry boundary.

Section 3 – Licensing and future mining activity

Future underground mining

None recorded.

Coal mining licensing

None recorded within 200 metres of the enquiry boundary.

Court orders

None recorded.

Section 46 notices

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

Withdrawal of support notices

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Section 4 – Further information

Based on the responses in this report, no further information has been highlighted.

Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk**.

Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Opencast mines

Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

Coal Authority managed tips

Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

Site investigations

Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

Remediated sites

Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

Coal mining subsidence

Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

Mine gas

Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission.

Mine water treatment schemes

Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

Future underground mining

Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

Coal mining licensing

Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

Court orders

Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

Section 46 notices

Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

Withdrawal of support notices

Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

Payment to owners of former copyhold land

Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

APPENDIX C

Risk Classification Matrix

Table 7. Risk Classification Matrix

		Consequence			
		Severe (Sv)	Medium (Md)	Mild (Mi)	Minor (Mr)
Probability	High (Hi)	Very high risk	High Risk	Moderate Risk	Moderate/low risk
	Likely (Li)	High risk	Moderate risk	Moderate/low risk	Low risk
	Low likelihood (Lw)	Moderate risk	Moderate/low risk	Low risk	Very low risk
	Unlikely (Ul)	Moderate/low risk	Low risk	Very low risk	Very low risk

After CIRIA Report C552, Contaminated Land Risk Assessment A Guide to Good Practice, 2001

Table 8. Classification of Consequence

Classification	Definition	Examples
Severe	Short-term (acute) risk to human health likely to result in “significant harm” as defined by the Environment Protection Act 1990, Part IIA. Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource. Catastrophic damage to buildings/property. A short-term risk to a particular ecosystem or organisation forming part of such ecosystem (note: the definitions of ecological systems within the Draft Circular on Contaminated Land, DETR, 2000).	High concentrations of cyanide on the surface of an informal recreation area. Major spillage of contaminants from site into controlled water. Explosion, causing building collapse (can also equate to a short-term human health risk if buildings are occupied).
Medium	Chronic damage to Human Health (“significant harm” as defined in DETR, 2000). Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution).	Concentration of a contaminant from site exceeds the generic or site-specific assessment criteria.

	A significant change in a particular ecosystem or organism forming part of such ecosystem, (note: the definitions of ecological systems within Draft Circular on Contaminated Land, DETR, 2000).	Leaching of contaminants from a site to a major or minor aquifer. Death of a species within a designated nature reserve. Lesser toxic and asphyxiate effects of carbon dioxide
Mild	Pollution of non-sensitive water resources. Significant damage to crops, buildings, structures and services ("significant harm" as defined in the Draft Circular on Contaminated Land, DETR, 2000). Damage to sensitive buildings/structures/services or the environment.	Pollution of non-classified groundwater. Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability).
Minor	Harm, although not necessarily significant harm, which may result in a financial loss or expenditure to resolve. Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc.). Easily repairable effects of damage to buildings, structures and services.	The presence of contaminants at such concentrations that protective equipment is required during site works. The loss of plants in a landscaping scheme. Discoloration of concrete.

After CIRIA Report C552, Contaminated Land Risk Assessment A Guide to Good Practice, 2001

Table 9. Classification of Probability

Probability Classification	Definition
High likelihood	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term
Low Likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain

	that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is a pollution linkage but circumstances are such that it is improbable that an event would occur even in the very long term.

After CIRIA Report C552, Contaminated Land Risk Assessment A Guide to Good Practice, 2001

Table 10. Classification of Risk and Likely Action Required

Very high risk (Vh)	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, OR, there is evidence that severe harm to a designated receptor is currently happening. This risk, if realised, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required.
High risk (Hi)	Harm is likely to arise to a designated receptor from an identified hazard. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short-term and are likely over the longer-term.
Moderate risk (Md)	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer-term.
Low risk (Lw)	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very low risk (VI)	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.
