Method Statement - External Signage

Introduction:

This document has been prepared to provide further information relating to the proposed new signage to Unit 6, Cross Street, The Royal Exchange - Manchester.

Proposed Sign:

The proposals are to install a new sign to above the entrance way in the centre of the string course and add new art work to the existing overhead illuminated signage.

Methods for fixing items to existing fabric:

New Signage: Heritage sign specification fixed to wall with 9mm cover spacer in Material aluminium anodised bronze finish. See AWW drawings for location and detail.

New artwork applied to existing signage: New artwork on self adhesive vinyl applied to existing sign. See AWW drawings for locations and details.

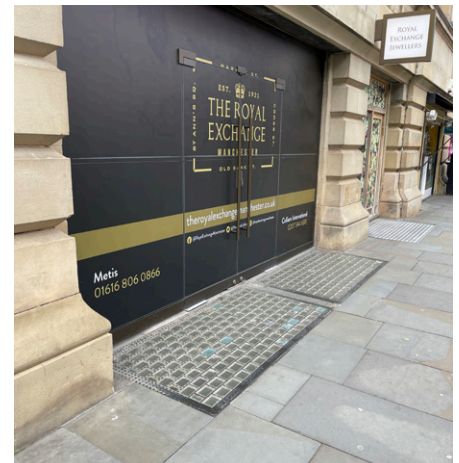

Interventions:

The only interventions with the existing structure will be fixing into the existing stone for the new sign. This is in-line with neighbouring units at The Royal Exchange Manchester. The signage can be removed in the future without causing negligible damage to the existing fabric.

Summary:

As shown above there are no alterations to the Historic fabric and only a few interventions where fixings are required to the existing surfaces. As there is very little intervention, the new signage will have a negligible impact on the historic asset.
