Approaches to Refinishing Marble Tiles & Other Surfaces

Marble Repair

once you have cleaned the surface, you will need to make sure that it is dry enough for the epoxy or cement to work. Put on a pair of rubber gloves. Lay out some protection and get ready to mix the epoxy on it. If the epoxy is clear and you want to tint it, do this next and then add the hardener.

Use a narrow tool like a wooden stick to spread the epoxy into the crack and push it in as deeply as possible. Carefully spread it out evenly with a razor blade, making sure that the crack is filled up to the surface. Let it dry for about 15 minutes according to the package directions. You will then need to sand the crack, and you can finish by polishing it.

Marble repair kits. including epoxy, tools, sandpaper and other things you need to fix tiles or other marble surfaces, like sinks and countertops. To keep your marble looking good over time, avoid cutting and serving acidic food directly on the surface and do not clean it with acidic cleaners.

Things You Will Need

- Nylon brush with stiff bristles
- Acetone
- Sponge or lint-free cloth
- Fan
- Mask
- Rubber gloves
- Marble repair kit or epoxy
- Sandpaper
- Coloured wax stick, tinting material or marble dust (if needed)
- Small brush
- Protection sheeting
- Hardener
- Wooden stick
- Razor blade
