1 INTRODUCTION

1.1 Background

LK Consult Ltd (LKC) has been commissioned by Civic Engineers to carry out a Phase 1 Preliminary Risk Assessment (PRA) for Mirabel House, Great Ducie Street, Manchester. The report was undertaken in support of a future planning application to redevelop the site for mixed commercial and residential end use.

According to guidance set out in CLR11¹ and the National Planning Policy Framework (NPPF)² a PRA with a site reconnaissance is required as a minimum to ascertain if there is a potential contamination risk.

In accordance with current guidance, the PRA will include a site reconnaissance, site history, geology, hydrogeology, hydrology, mineral search and a landfill search. Information gathered from the desk study and site reconnaissance will be used to develop a contamination conceptual model for the site, which will support the identification and assessment of any pollutant linkages.

In addition, the information gathered will be used to identify potential geotechnical constraints associated with the redevelopment of the site.

Based on the findings of this report, an appropriate site investigation can be derived, if required, once planning approval has been granted.

1.2 Site Detail

A summary of the site details is presented in Table 1-1. Figures 1 and 2 indicate the site location and boundary. Figure 3 indicates the proposed development (ground floor plan).

Location	Land to the east and west of Breslyn Street, between Mirabel Street and Great Ducie Street, Manchester, M3 1PQ. Centred at approximate National Grid Reference 383790 399030.
Area	1,600m ² .
Topography	29 metres above ordnance datum (AOD). Site is approximately level.
Current Land Use	<u>Site</u> Buildings in the northeast and west, tarmacadam car park in the centre, east and south. <u>Surrounding Area</u> North: Vacant land, commercial and residential apartments. East: Great Ducie Street, Manchester Arena. South: Railway land including old viaduct adjacent to site boundary. West: Commercial and residential apartments.
Proposed Development	Mixed commercial and residential end use.

Table 1-1: Summary of the site details.

² DCL (2012). "National Planning Policy Framework." Department of Communities and Local Government. March 2012.

2 SITE HISTORY

In compiling the site history, LKC consulted historical mapping provided by the Landmark Information Group Ltd. Copies of relevant historical plans are provided in Appendix A and are summarised Table 2-1. Significant features within 100m of the site boundary have been presented (distances will be approximate). The exception to this will be significant features within a 250m buffer that could be infilled historically.

Please note that the current site boundary (Figure 2) has altered since the purchase of the Envirocheck Report (northeast area no longer included). The historical review has taken the new site boundary into account.

Site Features	Location	Map Dates Present	Comments
Road	N, Centre and SW	1850	- Running approximately NW-SE in the north of the site and bends in the centre towards the SW. - Named as Sion Hill on 1850 mapping. - Renamed as Boundary Street on 1891 mapping. - Renamed as Breslyn Street on 1975 mapping.
Timber Yard	NW	1850	- Buildings present from 1891 mapping (see below).
Buildings (dwellings, film stores, unknown uses)	W	1850-2018	- Buildings to W of Boundary Street, use unknown on early mapping. - 1945 detailed mapping: several buildings named as 'film stores', remaining 3 buildings named as dwellings. All 2 storeys. Basements present in 2 buildings in the southern area (N of Boundary Road). - 3 dwellings in NW corner no longer present on 1951 mapping. - 1962 detailed mapping: New buildings present in NW corner, use unknown. Film stores still noted. - Buildings still present on 2018 mapping.
Buildings (possible cinema, workrooms, offices)	NE	1850-2000	- Buildings in the NE, to the east of Boundary Street, use unknown on early mapping. - Detailed mapping dated 1945 names buildings as 'Central Kinema Blogs', shown as 3 storeys with basements. - 1962 detailed mapping: Buildings name as 'Central Kinema Blogs', workrooms and offices, 'travel goods'. - Buildings no longer present on 2000 aerial photography (car park on 2018 aerial photography).
Buildings (public house)	SE	1891-2000	- Large building and several small buildings. - Named as public house on 1933 and 1945 mapping. 3 storey building, no basement shown. - Named as Crows Hotel on 1951 mapping. - Building still present on 2000 aerial photography but no longer present on 2018 mapping (used as car park).
Smithy	SW	1891	- Located in the SW corner of the site. Only named on 1891 mapping (1:500 scale) but could have been present later (change of use by at least 1945, see below). - Glazed roof adjacent to east may be associated with Smithy.

Table 2-1: Summary of historical features.

Site Features	Location	Map Dates Present	Comments
Buildings (cinema equipment and film store, theatre club, possible plastic goods factory)	SW	1945-2000	- Named as 'Cinema Equipment and Film Stores' on 1945 mapping. 2 storey buildings, no basement shown. - 1962 mapping, building uses include 'Experimental Theatre Club' and 'Plastic Goods Fac' (factory?). - Building still present on 2000 aerial photography but no longer present on 2018 mapping (used as car park).
Car park	E and S	2018	- Car parking shown on most recent mapping and aerial photography (2018 only).
Surrounding Area Features	Distance/ Location	Map Dates Present	Comments
Coal Yard	20m E	1850	- No longer present on 1891 mapping.
Smithy	45m E	1850	- No longer present on 1891 mapping.
Empire Buildings	12m SW	1891	- Use unknown. - No longer present on 1908 mapping.
Buildings	Adj. S	1891	- Includes Victoria Hotel and other unknown uses. - No longer present on 1908 mapping.
Embankments	10m SE	1891	- Sloping down to SW (towards the River Irwell). - No longer present on 1908 mapping.
Printing and engraving Works	30m NW	1891-1933	- No longer named on 1933 mapping (building still present). - Part of Parcels Post Sorting Office by 1951 mapping.
Buildings	Adj. N	1848-2003/2018	- Use unknown on early mapping. - 1945 mapping shows garage, dwellings, warehouses and offices. - 1962 mapping shows offices for adjacent Motor Works, warehouses, joiner, paint warehouse. Dwellings have been demolished. - All buildings demolished by 2009, with the exception of adjacent building to N/NE (still present in 2018).
Works	15m N	1848-2018	- 30m N until 1891 mapping. Extended to 15m N from 1908 mapping and named as Motor Works. - 1945 mapping shows features within the Motor Works as smithy, saw mill, body shop, paint shop, showrooms, warehouse, sunk petrol tank. - Named as Warehouse from 1975 mapping. - Buildings still shown on 2018 mapping and extended to site boundary. Named as The Beaumont Building (use unknown).
Roads	Adj. E & W	1848-2018	- Great Ducie Street (east) and Moreton Street (west). - By 1975, Moreton Street renamed Mirabel Street.
Railway Land	Adj. to S & from 30m E / SE / SW.	1848-2018	- Victoria Station 30m E. - Exchange Station 45m SE and 100m SW. - Victoria Station Yard 30m NE. - Railway lines 30m SE and extend to adjacent to site boundary (S) from 1908 mapping. - Station buildings reduced in size and number of railway lines reduced over time.
Works/Mills	65m SW	1848-2003	- Various works/mills from 65m SW, along the SW banks of River Irwell. - No longer present on 2009 mapping.
Works	85m NW	1891-1933	- Works including wire works and Claviger Works (cycle). - Not named from 1908 mapping (building remains). - No longer present on 1945 mapping.
Post Sorting Office	10m SE	1908-2018	- Building remains on 2018 mapping (not named).
Arena	20m NE	1996-2018	

Table 2-1 (cont.): Summary of historical features.

3 ENVIRONMENTAL SETTING

In compiling this Section, LKC consulted environmental information provided by the Envirocheck Report (Appendix B), British Geological Survey (BGS) (Appendix C), the Coal Authority and Zetica (Appendix D). A summary is presented in Table 3-1.

Categories (data sources)			Details
Geology	Artificial ¹		- None recorded on site on BGS mapping. - Made Ground recorded adjacent to the east and south.
	Superficial ¹		- Alluvium (clay, silt, sand and gravel) across site. - No drift recorded at the NE boundary and offsite to the NE.
	Bedrock ^{1,2}		- Chester Formation (sandstone). - Ardwick Fault 110m (orientated NW-SE, downthrow to NE).
	BGS logs ³		- BH Ref: SJ89NW1458, 3m E: made ground to 3.5m, soft to firm silty and sandy CLAY with occasional gravel to 4.9m, Medium dense SAND and GRAVEL with occasional cobbles to 6.2m, very dense weakly cemented SAND with occasional sandstone fragments to 7.0m. N values: 1.5m=17, 3m=19, 5.5m=33, 6.5m=+200. - BH Ref: SJ89NW1470, 15m NE: made ground to 5.23m, compacted SAND with small clay and gravel content to 8.82m, weathered SANDSTONE to 10m. - BH Ref: SJ89NW1457, 84m SE: made ground to 3.8m, sandy CLAY with sand and gravel bands to 7.7m, weakly cemented slightly silty ROCKSAND (SANDSTONE) with sand bands to 15.00m with thin clay at 11.41-11.55m.
Hydro-geology	Aquifer Designation	Superficial ¹	- Secondary A Aquifer.
		Bedrock ¹	- Principal Aquifer.
	Source Protection Zone (SPZ) ¹		- Site is not within an SPZ.
	Groundwater Abstractions ¹		- 18 within 250m. All associated with Strangeways Brewery from 140m N, for process water, drinking, cooking, sanitary, washing.
Hydrology	Nearest Surface Water ¹		- River Irwell 35m SW, flowing to the southeast.
	Water Quality Data ¹		- River Irwell 89m SW: River Quality E.
	Flooding ¹		- Flood Zone 2.
	Surface Water Abstractions ¹		- None within 1km.
	Discharge Consent ¹		- 9 within 250m. - Nearest 84m W, storm sewage overflow into the River Irwell.
	Pollution Incidents ¹		- 2 within 250m. - Nearest 183m E, dated 1995, Category 3 Minor Incident, no pollution found.
Minerals / Mining	Coal Mining Development High Risk Area ⁴		- Not within site area.
	Surface Extractions ¹		- 1 within 500m. - Strangeways Brick Field 446m N, common clay and shale, ceased.
	Cheshire Brine Compensation District ¹		- Not within site area.

Table 3-1: Summary of environmental setting.

Data Sources:

1 Envirocheck Report (Appendix A and B)

2 BGS Sheet 1:50,000

3 BGS GeoIndex <http://mapapps2.bgs.ac.uk/geoindex/home.html> (Appendix C)

4 The Coal Authority Interactive Map Viewer <http://coal.decc.gov.uk/en/coal/cms/publications/data/map/map.aspx>

Categories (data sources)		Details
Ground Stability ¹ (on-site)	Collapsible Ground	- No to very low hazard.
	Compressible Ground	- No to moderate hazard.
	Ground Dissolution	- No hazard.
	Landslide	- Very low to low hazard.
	Running Sand	- No to low hazard.
	Shrinking / Swelling Clay	- No to very low hazard.
Landfill sites	Known/Registered ¹	- None recorded within 250m.
	Potential ¹	- Potentially infilled land (water) 190m NE and 235m NE: unknown filled ground (pond, marsh, river, stream, dock etc). - Made Ground also recorded on BGS mapped in the surrounding area.
Radon ¹		- Probability of <1% of homes above Action Level. - No further action required.
Designated Sites ¹		- Nitrate vulnerable zone onsite.
Contemporary Trade Directory ¹		- 4 within 100m. - 2 laundries 8m W & 13m S, inactive. - Needs Electrical 28m S (electrical goods sales, manufacturers and wholesalers), inactive. - Gls Ceramics 29m SW (ceramic manufacturers, supplies and services), inactive.
Fuel Station Entries ¹		- None within 250m.
Unexploded Ordnance (UXO) Risk ⁵		- Moderate.

Table 3-1 (cont.): Summary of environmental setting.

Data Sources:**1** Envirocheck Report (Appendix A and B)**5** Zetica Unexploded Bomb Risk (Appendix D)

4 SITE RECONNAISSANCE

A site reconnaissance was carried out on 30th May 2018. Hand dug trial holes were not undertaken as the site was fully hardstood.

An annotated plan with photographs is provided in Appendix D.

Relevant features identified on site are summarised below:

- The site is occupied by a public car park and a two-storey building in the north west.
- A road, Breslyn Street, runs through the centre of the site.
- The car park is hardstood with tarmac surfacing which was noted to be cracking in a number of locations.
- The car park surface is uneven and is raised up above Breslyn Street.
- The building on site appeared to be being used by a building firm as offices.
- A disused railway viaduct forms the southern boundary of the site.
- Adjacent to the north east of the site, a retail premises being used by a world foods supplier is located.
- Evidence of surface water drains and a service cover for a fire hydrant was noted on site.
- No visual or olfactory evidence of significant contamination was identified.
- In its current state, the car park was accessible for site investigation plant but any investigation to be done in the footprint of the building would need to be post demolition.

The surrounding area land use is a mixture of residential and commercial with a lighting shop and residential apartments to the north, residential apartments and offices to the west and a restaurant within the railway arches to the south. Great Ducie Street and the Manchester Arena are located to the east.

5 PRELIMINARY CONCEPTUAL MODEL

5.1 Introduction

The aim of the conceptual model is to provide a preliminary assessment of the likelihood of a pollutant linkage for each potential combination of contaminant, pathway and receptor. A conceptual model can be used to make an informed decision on the contamination risks associated with the site and whether further site investigation work is required.

The Sections below are therefore divided into potential contaminant, potential pathway and potential receptor as described in CLR11³. The final Section provides an assessment of the potential pollutant linkages that may still be present on the site if redevelopment were to occur.

5.2 Potential Contaminants

Potential contamination sources are detailed in Table 5-1.

Source	Contaminants
Onsite Timber Yard	- Machinery, vehicles: fuels, oils. - Wood treatment (e.g. creosote, fungicides, chromated copper arsenate).
Onsite warehouses, smithy, factory, buildings of unknown use (possible works)	- Unknown inorganic and organic contaminants (dependant on specific uses).
Onsite Car Park	- Spillages / leakages: petroleum hydrocarbons, oils (source expected to be minimal and localised)
Onsite Made Ground (general made ground, demolition of buildings with basements)	- Ash and clinker (e.g. from hearths and boilers, often historically used for site raising / levelling): Heavy metals, sulphates and PAHs ⁴ . - Asbestos Containing Material (ACM). - Other unknown inorganic / organic contaminants (dependant on fill material source). - If significant depth of organic / putrescible material: Hazardous gas (principally carbon dioxide and methane).
Offsite Potentially Infilled Ground	- Hazardous gas (principally carbon dioxide and methane). - Given age, size and location of potentially infilled features, not considered to be a significant source.
Offsite Railway Land (adjacent railway line on viaduct) ⁵	- The main risk will be from particulates (PAHs, metals) as railway line is offsite and raised above site on viaduct.
Surrounding land uses (garage, coal yard, smithy, printing works, motor works, other mills/works)	- Metals, inorganic compounds and organic compounds. - Not expected to be a significant source due to distance from site.

Table 5-1: Potential contamination sources

⁴ Defra (2002). "Potential Contaminants for the Assessment of Land." R&D Publication CLR 8.

⁵ Department of the Environment Industry Profile – Railway land (1995).

5.3 Potential Receptors

Potential receptors are detailed in Table 5-2.

Receptors	
Human Health	- Future site users (including residents, visitors and site workers). - Offsite land users.
Controlled Waters	- River Irwell 35m SW. - Principal Aquifer (bedrock).
Buildings and structures.	
Potable water pipes.	
Flora omitted as no landscaping on ground floor proposed development plans.	

Table 5-2: Potential receptors

5.4 Potential Pathways

Potential pathways are detailed in Table 5-3.

Pathways		
Soil	Human Health ⁶ (mixed commercial and residential land use with no soft landscaping)	- Inhalation of vapours outside. - Inhalation of vapours inside. - Omitted: ingestion of soil, ingestion of soil-derived indoor dust, dermal contact with soil, dermal contact with soil-derived indoor dust, inhalation of soil-derived outdoor dust, inhalation of soil-derived indoor dust, ingestion of contaminated vegetables and ingestion of soil attached to vegetables.
		- Windblown dust / fibres to adjacent receptors.
		- Direct contact with receptors (building foundations, services).
Water		- Surface run-off over impermeable surface.
		- Site is relatively flat and grassed; therefore, surface run-off will be limited.
		- Infiltration into the ground, through potentially contaminated material (contamination possibly going into solution).
		- Site is predominantly hardstood; therefore, infiltration is likely to be limited.
		- Migration through potentially permeable strata and preferential pathways.
		- Superficial (alluvium) likely to be variably permeable.
Gas		- Bedrock (sandstone) likely to be relatively permeable.
		- Preferential pathways: possible services.
		- Migration through potentially permeable strata and preferential pathways.
		- Superficial (alluvium) likely to be variably permeable.
Gas		- Bedrock (sandstone) likely to be relatively permeable.
		- Preferential pathways: possible services.
Gas		- Migration into buildings (e.g. via services) and accumulation of gases in confined spaces (potentially causing explosion if methane is present).
		- Migration into buildings (e.g. via services) and accumulation of gases in confined spaces (potentially causing explosion if methane is present).

Table 5-3: Potential pathways

⁶ EA (2008). "Updated Technical Background to the CLEA Model." Science Report – SC050021/SR3.

5.5 Preliminary Contamination Conceptual Model

The preliminary contamination conceptual model is illustrated in Table 5-4 and has identified six generic potential pollutant linkages.

Each linkage is described along with an assessment of the risk based upon guidance on probabilities and consequences outlined in CIRIA C552⁷.

In order to assess the potential risk for each pollutant linkage, an assessment of the magnitude of the potential consequence (severity) of the risk occurring and the magnitude of the probability (likelihood) of the risk occurring has been considered and classified. This is based on the guidance provided in CIRIA C552 and further details including a risk matrix is provided in Appendix E.

Where LKC identified a low to very low risk, limited intrusive investigation work, a watching brief (during construction work) or no investigation work will be recommended. This will be dependent on the nature of the site and the proposed development.

Where the risk falls into the moderate/low risk, LKC will undertake an assessment to establish what category the pollutant linkage will fall into (i.e. moderate or low risk will be chosen).

Where LKC identifies a moderate or higher risk, intrusive work or precautionary remedial measures will be recommended.

It should be noted that there may be risk from short term exposure from contaminated soil to site workers. The Preliminary Contamination Conceptual Model deals with long term exposure to key receptors. Acute risks can be easily mitigated by good environmental management of the site during site works. Standard health and safety precautions (as per HSE guidance⁸) should be adopted by all workers involved with site enabling and construction works. Therefore, this receptor is not considered in the contamination conceptual model.

⁷ CIRIA (2001). "Contaminated Land Risk Assessment: A Guide to Good Practice". C552.

⁸ HSE (1991). "Protection of Workers and the General Public During Development of Contaminated Land" London HMSO.

Pollutant Linkage	Pathway	Receptor	Contaminant (source)	Probability	Consequence	Risk	Assessment and Recommendations
PL1	-No viable pathways (dermal inhalation, ingestion).	-Future site users. -Offsite receptors.	-ACM. -Inorganics (e.g. metals). -Organics (e.g. PAHs, fuels, oils). -Fungicides. (made ground, timber yard, smithy, warehouses / works, car park, offsite land uses)	-	-	-	-No viable pathways anticipated as the proposed development comprises mixed commercial and residential buildings with no soft landscaping. -No pollutant linkage therefore no further assessment required.
PL2	-Inhalation of vapours. -Migration through permeable strata / preferential pathways.	-Future site users. -Offsite receptors.	-Volatile Contaminants such as hydrocarbons, solvents. (made ground, timber yard, smithy, warehouses / works, car park, offsite land uses)	Low Likelihood	Medium	Moderate / Low	-Low likelihood as significant volatile contamination not expected from site history and construction methods will likely reduce any potential migration into buildings. -Until ground conditions are confirmed moderate risk assumed. - Recommendation: Investigation work required to confirm ground conditions. To include onsite PID testing and possible confirmatory laboratory testing.
PL3	-Inhalation of gas. -Migration through permeable strata / preferential pathways. -Explosion in confined spaces.	-Future site users. -Buildings. -Offsite land users.	-Hazardous Gas: methane, carbon dioxide. (made ground on and offsite).	Low Likelihood	Severe	Moderate	-Low likelihood as significant made ground could be present below the site and in the surrounding area. - Recommendation: Gas monitoring or precautionary gas protection if significant made ground or putrescible material is identified on site. .
PL4	-Surface Run-off. -Migration through permeable strata / preferential pathways. -Perched waters migration.	-Groundwater (Principal Aquifer). -Surface water (River Irwell).	-Mobile inorganic and organic contaminants, fungicides. (made ground, timber yard, smithy, warehouses / works, car park).	Low Likelihood	Medium	Moderate / Low	-Low likelihood as significant contamination not expected from site history, however pathway may exist to controlled waters (particularly the aquifer). -Until ground conditions are confirmed moderate risk assumed as a precaution. - Recommendation: Investigation work recommended, to include groundwater sampling (if present).
PL5	-Sulphate attack on concrete.	-Building structure.	-Sulphate (made ground).	Likely	Mild	Moderate / Low	-Likely probability as made ground anticipated, which may be in contact with concrete used in future buildings. -Until ground conditions are confirmed moderate risk assumed. - Recommendation: Intrusive investigation required, to include sulphate and pH testing.
PL6	-Ingestion of tainted water supply.	-Future site users. -Water pipes.	-Organic Contaminants such as hydrocarbons, solvents (made ground, timber yard, smithy, warehouses / works, car park).	Likely	Medium	Moderate	-Likely probability as made ground may be present at pipeline depth. - Recommendation: Investigation work required to confirm ground conditions. To include organic testing at anticipated pipeline depth.

Table 5-4: Preliminary Contamination Conceptual Model.

6 PRELIMINARY GEOTECHNICAL RISK ASSESSMENT

Geology is mapped as alluvium over sandstone. Made ground is also anticipated associated with the demolition of buildings, former basements are also anticipated.

Nearby BGS logs have recorded made ground to 3-5m, superficial (clay, sand, sand and gravel) to 7-8m with weathered sandstone below.

The Envirocheck Report identified no to low hazard of collapsible ground, compressible ground, ground dissolution, landslide, running sand and shrinking / swelling clay across the majority of the site. A moderate risk of compressible ground was recorded in the east of the site.

The following need to be considered and investigated before any construction work commences:

- Deep made ground and / or relic in-ground structures (from former buildings with basements) may be present on site which could affect groundworks (e.g. grubbing out of structures) and type of foundations required (e.g. deepening of foundations / pilling).
- The strength and variability of superficial deposits need to be confirmed. Alluvium is anticipated which could include clay, silt, sand and gravel. BGS logs confirm variable superficial deposits.
- Given the nature of the development (multi-storey apartments) deeper foundations, potentially extending into the bedrock may be required. It would be advisable to confirm the type, strength and depth of bedrock.
- The depth of groundwater and variability of the water table should be confirmed as shallow / fluctuating groundwater can affect the strength of the soil, particularly in granular ground.
- Sulphate content of the made ground and natural ground should be confirmed to assess the concrete requirements.

7 SUMMARY CONCLUSIONS AND RECOMMENDATIONS

7.1 Summary Conclusions

The proposed development is for a mixed use multi-storey building (commercial and residential). No landscaping is proposed at ground level.

The site has historically comprised a number of buildings, understood to contain basements. Uses including residential, timber yard, warehouses / storage, film stores, possible cinema, work rooms, offices, public house, smithy, possible factory.

Several buildings remain in the west; however, the majority of the site now comprises car parking (tarmacadam base).

Potential contamination sources affecting the site were identified as heavy metals, PAHs, sulphate, asbestos, other inorganics / organics and gas (carbon dioxide and methane).

These contaminants may pose a risk to site users (via ingestion/dermal contact/inhalation pathways and explosion), controlled waters (via migration through permeable strata / preferential pathways), buildings and structures (direct contact and explosion) and water pipes (direct contact).

A contamination conceptual model has been produced by LKC. This has identified the following risks summarised in Table 7-1.

Pollutant Linkage		Risk	Recommendations
1	Contaminants posing a risk to future site users via dermal contact, ingestion and inhalation (of soil, dust, fibres and vegetables).	N/A	No viable pathways anticipated as the proposed development comprises mixed commercial and residential buildings with no soft landscaping. No pollutant linkage therefore no further assessment required.
2	Volatile contaminants posing a risk to future site users via the inhalation of vapours.	Moderate / Low	Investigation work required to confirm ground conditions. To include onsite PID testing and possible confirmatory laboratory testing
3	Gas posing a risk to buildings and future site users via the migration of gas into building causing explosion and asphyxiation.	Moderate	Gas monitoring or precautionary gas protection measures required if significant made ground and/or putrescible material identified onsite.
4	Mobile contamination posing a risk to controlled waters via the migration through permeable strata.	Low	Investigation work recommended, to include groundwater sampling (if present).
5	Sulphate posing a risk to building via direct contact (sulphate attack).	Moderate	Intrusive investigation required, to include sulphate and pH testing.
6	Organic contaminants posing a risk to water pipes.	Moderate	Investigation work required to confirm ground conditions. To include organic testing at anticipated pipeline depth.

Table 7-1: Summary risk table.

The preliminary geotechnical assessment has also identified the following potential risk which will need to be investigated:

- Possible deep made ground with in-ground structures and former basements.
- Unknown type, strength and depth of superficial and bedrock.
- Unknown depth of groundwater.
- Sulphate content of made ground and natural ground.

Further work is recommended, which is detailed in the following Section.

7.2 Recommendations

7.2.1 General

In accordance with NPPF, LKC consider that sufficient information on the potential contaminative status of the site is available in this Preliminary Risk Assessment report to allow the validation of any future planning application by the Local Planning Authority and for conditional planning approval to be granted. Such conditional approval will likely include standard prescriptive conditions requiring a site investigation, risk assessment and, if appropriate, a remedial strategy are completed to the satisfaction of the Local Planning Authority prior to the commencement of any development.

A Phase 2 intrusive survey should be carried out across the site to investigate the identified potential pollutant linkages further. LKC would recommend this can be undertaken pre-planning or once conditional planning approval is granted.

7.2.2 Phase 2 investigation

In order to address the potential pollutant linkages a site investigation is recommended. The site investigation should be carried in accordance with relevant guidance documents (including BS10175⁹ and BS5930¹⁰).

The investigation should include trial pits and / or boreholes at a sampling density of 1 sample per 10-25m square centres for a 'detailed investigation'.

Soil samples should be collected from the trial pits / boreholes and tested for contaminants of concern based on the preliminary conceptual model and field observations (PID tests and visual / olfactory evidence).

If a source of gas is identified / and or a potential pathway during intrusive investigation work gas monitoring is recommended to address pollutant linkage 3. Boreholes drilled on site should be installed with monitoring wells. Monitoring should be undertaken in accordance with CIRIA C665¹¹. As a minimum gas monitoring would likely be over a three month period with at least six gas monitoring visits under worst case temporal conditions.

In order to address pollutant linkage 4, groundwater samples should be collected from boreholes (monitoring wells). Samples should be tested for contaminants of concern based on the preliminary risk assessment, field observations and results of the soil analysis.

It should be noted that boreholes and / or trial pits may also be utilised to provide appropriate geotechnical information on sub-surface conditions.

⁹ British Standard (2017). "Investigation of Potentially Contaminated Sites – Code of Practice." BS10175:2017.

¹⁰ British Standard (2015). "Code of Practice for Ground Investigations." BS5930:2015.

¹¹ CIRIA (2007). "Assessing Risks Posed by Hazardous Ground Gases to Buildings." CIRIA C665.

This investigation, in conjunction with appropriate geotechnical testing, will identify and characterise any contaminants encountered. Information from this investigation can then be used to provide a more detailed assessment of the identified pollutant linkages, provide appropriate foundation solutions and, if necessary, identify appropriate remedial measures to ensure that the site is made suitable for its proposed end use.

7.2.3 *Watching Brief*

Notwithstanding the above, a watching brief should be maintained by the site manager during the clearance of the study area and development works, for any likely contaminated made ground, such as ash and clinker; any unusual ground conditions and any visual and / or olfactory evidence of contamination.

If such evidence of made ground and / or visual and olfactory evidence of contaminants are identified, then sampling will likely be required to characterise the material and recommendations for appropriate remediation undertaken, if required. Samples should be collected in sufficient quantity and analysed for a suitable suite of determinands to demonstrably characterise the study area. Should any significant thickness of made ground be encountered during works within the study area, LKC would recommend that this information is reported to the Local Authority and to LKC for further assessment.

7.2.4 *General*

A copy of this report should be sent as part of the planning application.

LKC would advise that a more detailed site investigation proposal be provided to the Local Authority for their approval prior to carrying out any intrusive investigation work.

7.3 **Further Considerations**

7.3.1 *Unexploded Ordnance*

A moderate risk from unexploded ordnance (UXO) has been identified from regional UXO mapping. It is recommended that a detailed UXO desk study is carried out to confirm the risk. The detailed desk study will confirm if any special precautions need to be considered before any intrusive work is carried out.

7.3.2 *Flood Risk Assessment*

LKC identified that the site is in a Flood Zone 2, therefore a flood risk assessment is required to satisfy the Environment Agency/Planning.

If site over 1Ha, in a Flood Zone 2 (medium risk) or in a Flood Zone 3 (high risk), NPPF¹² requires that a Flood Risk Assessment (FRA) is undertaken to assess the impact of the site on the local drainage system and to assess potential for Sustainable Drainage Systems (SuDS) techniques. Even if the site is not identified on EA mapping as being at risk from fluvial or tidal sources, consultation with the EA, Local Authority and water provider may still identify drainage and local flooding issues which may need to be addressed.

7.3.3 *Asbestos*

Even though no asbestos was identified externally on the existing buildings there may be areas inside that have Asbestos Containing Materials (ACMS) given the age of the properties. Therefore we would advise that a Pre-Demolition and Major Refurbishment Asbestos Survey is undertaken prior to demolition by a professional contractor.

¹² NPPF (2012) (Rev. 2014) National Planning Policy Framework: Meeting the challenge of climate change, flooding and coastal change. Footnote 20".

Lancashire And Furness

Published 1892

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

LK GROUP

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

APPENDIX D

ZETICA UXO RISK

UNEXPLODED BOMB RISK MAP

SITE LOCATION

Location: M3 1PQ,
Map Centre: 383797,399045

LEGEND

- High:** Areas indicated as having a bombing density of 50 bombs per 1000acre or higher.
- Moderate:** Areas indicated as having a bombing density of 15 to 49 bombs per 1000acre.
- Low:** Areas indicated as having 15 bombs per 1000acre or less.

How to use your Unexploded Bomb (UXB) risk map?

The map indicates the potential for Unexploded Bombs (UXB) to be present as a result of World War Two (WWII) bombing.

You can incorporate the map into your preliminary risk assessment* for potential Unexploded Ordnance (UXO) for a site. Using this map, you can make an informed decision as to whether more in-depth detailed risk assessment* is necessary.

What do I do if my site is in a moderate or high risk area?

Generally, we recommend that a detailed UXO desk study and risk assessment is undertaken for sites in a moderate or high UXB risk area.

More often than not, this further detailed research will conclude that the potential for a significant UXO hazard to be present on your site is actually low.

Never plan site work or undertake a risk assessment using these maps alone. More detail is required, particularly where there may be a source of UXO from other military operations which are not reflected on these maps.

If my site is in a low risk area, do I need to do anything?

If both the map and other research confirms that there is a low potential for UXO to be present on your site then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

A low risk really means that there is no greater probability of encountering UXO than anywhere else in the UK.

If you are unsure whether other sources of UXO may be present, you can ask for one of our **pre-desk study assessments (PDSA)**

If I have any questions, who do I contact?

tel: **+44 (0) 1993 886682**

email: **uxo@zetica.com**

web: **www.zeticauxo.com**

The information in this UXB risk map is derived from a number of sources and should be used in conjunction with the accompanying notes on our website: (<https://zeticauxo.com/downloads-and-resources/risk-maps/>)

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgment. The copyright remains with Zetica Ltd.

It is important to note that this map is not a UXO risk assessment and should not be reported as such when reproduced.

*Preliminary and detailed UXO risk assessments are advocated as good practice by industry guidance such as CIRIA C681 'Unexploded Ordnance (UXO), a guide for the construction industry'.

APPENDIX F

RISK EVALUATION

Risk Evaluation

The method for risk evaluation is a qualitative method of interpreting the output from the risk estimation stage of the assessment, based on CIRIA 552¹³. It involves the classification of the:

- Magnitude of the potential consequence (severity) of the risk occurring (Table A).
- Magnitude of the probability (likelihood) of the risk occurring (Table B).

Consequence (Severity)		
Classification	Definition	Example
Severe	- Short term (acute) risk to human health likely to result in 'significant harm' as defined by the Environment Protection Act 1990, Part IIA. - Short term risk of pollution (note: water Resources Act contains no scope for considering significance of pollution) of sensitive water resource. - Catastrophic damage to buildings/properties. - A short term risk to a particular ecosystem, or organism forming part of such ecosystem (note: the definition of ecological systems within the Draft Circular on Contaminated Land, DETR, 2000).	- High Concentrations of cyanide on the surface of an informal recreation area. - Major spillage of contaminants from site into controlled waters. - Explosion, causing building collapse (can also equate to short term human health risk if buildings are occupied).
Medium	- Chronic damage to Human Health ('significant harm' as defined in DETR, 2000). - Pollution of sensitive water resources (note Water Resources Act contains no scope for considering significance of pollution). - A significant change in a particular ecosystem, or organism forming part of such ecosystem.	- Concentrations of a contaminant from site exceed generic, or site specific assessment criteria. - Leaching of contaminants from a site to a major or minor aquifer (Principal and Secondary). - Death of a species within a designated nature reserve.
Mild	- Pollution of non-sensitive water resources. - Significant damage to crops, buildings, structures and services ('significant harm' as defined in DETR, 2000). - Damage to sensitive buildings/structures/services or the environment.	- Pollution of non-classified groundwater. - Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability).
Minor	- Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve. - Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc). - Easily repairable damage to buildings, structures and services.	- The presence of contaminants at such concentrations that protective equipment is required during site works. - The loss of plants in a landscaping scheme. - Discoloration of concrete.

Table A: Classification of Consequence.

Probability (Likelihood)	
Classification	Definition
High Likelihood	- There is a pollutant linkage and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	- There is a pollutant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. - Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low Likelihood	- There is a pollutant linkage and circumstances are possible under which an event could occur. - However it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	- There is a pollutant linkage but circumstances are such that it is improbable that an event would occur in the very long term.

Table B: Classification of Probability.

¹³ CIRIA (2001). "Contaminated Land Risk Assessment: A Guide to Good Practice". C552.

These classifications are then compared to indicate the risk presented by each pollutant linkage (Table C). It is important that this classification is only applied where there is a possibility (which can range from high likelihood to unlikely) of a pollutant linkage existing.

		Consequence			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk
	Likely	High Risk	Moderate Risk	Moderate / Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate / Low Risk	Low Risk	Very Low Risk	Very Low Risk

Table C: Comparison of Consequence against Probability.

Once the risk has been determined the corresponding action can be assessed (Table D).

Risk	Action Required
Very High Risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, OR, there is evidence that severe harm to a designated receptor is currently happening. This risk, if realised, is likely to result in a substantial liability. Urgent investigation (if not already undertaken) and remediation are likely to be required.
High Risk	Harm is likely to arise to a designated receptor from an identified hazard. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term.
Moderate Risk	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
Low Risk	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very Low Risk	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

Table D: Description of the Classification and Likely Action Required.

Where LKC identified a low to very low risk either limited intrusive investigation work, a watching brief (during construction work) or no investigation work will be recommended. This will be dependent on the nature of the site and the proposed development.

Where the risk falls into the moderate/low risk, LKC will undertake an assessment to establish what category the pollutant linkage will fall into (i.e. moderate or low risk will be chosen).

Where LKC identifies a moderate or higher risk intrusive work or precautionary remedial measures will be recommended.
