Detailed description: This is a technical elevation drawing of a pedestrian entrance gate. The gate is flanked by two brick pillars, each 3000 units high. The gate itself is 4000 units wide and 2200 units high. It features a curved top rail with circular finials and vertical bars. An intercom unit is mounted on the right side. The drawing includes various material specifications for the box sections and a dimension for the base width of the gate opening.
