Executive Summary

Appointment	Curtins were instructed by Morgan Sindall to undertake a Phase 1 Preliminary Risk Assessment (PRA) at Gorton Library, Manchester. This report has been undertaken in support of the proposed demolition of the current library building and the construction of a hardstanding carpark. The proposed development plans (at the time of writing) are presented in Appendix A.
Current Site Status	The development site is located at Gorton Library, Manchester with an approximate area of 0.29Ha. The National Grid Reference for the centre of the site is 388590, 396260. The development site comprises the Gorton Library building with associated areas of hardstanding surrounding the perimeter of the building. Additionally landscaped areas are present in the west and south of the site boundary.
Site History	In earliest available mapping, the development site and surrounding area is largely undeveloped with a small number of terraced houses recorded in the surrounding area. By 1908, Gorton has undergone significant development with recorded terraced houses and roads now recorded on site and in the surrounding area. Additionally, by this time industrial works are recorded in the surrounding area. By the 1980s, the site has undergone significant development and the terraced houses have been demolished and the Gorton Library is constructed on site. Terraced houses in the surrounding area are also demolished at this time and are replaced with new residential properties. The current site is largely unchanged and occupied by Gorton Library. The surrounding area is largely occupied by residential/commercial buildings with areas of public open space and hard standing.
Geology	Some Made Ground is anticipated to be present considering the site's history of redevelopment and has been recorded in the nearby BGS borehole record. Superficial deposits generally comprise Glacial Till (sandy, silty clays) underlain by bedrock noted as the Chester Formation (sandstone). The recorded BGS boreholes located between 102 and 183m southwest, southeast, and south of the site generally indicate Made Ground to depths between 1.00m and 1.40m bgl, underlain by clay between 7.00m and 8.00m bgl (unproven).
Hydrogeology	The site is underlain by a Principal Aquifer within the bedrock formation, a Secondary Undifferentiated Aquifer associated within superficial deposits and is not located within a Source Protection Zone. There are no groundwater abstractions located within 1km of the site.
Hydrology	The nearest surface water feature is the Gore Brook, approximately 340m south of the site. There are no recorded surface water abstraction points recorded within 1km. Six pollution incidents have been recorded within 500m of the site. There is one discharge consents within 500m of the site.
Unexploded Ordnance	The site is situated in Gorton, Manchester, which is identified as a Moderate risk area in UXO risk maps. A review of the available historic mapping suggests no ruins, bomb strikes or military areas within 1km of the site, therefore the risk from UXO during Curtins ground investigation fieldworks was concluded as Low. Contractors undertaking excavations should undertake their own UXO risk assessments with specialist input where required.
Initial Ground Contamination Assessment	The risk, from Made Ground, posed to site end-users is considered to be Moderate/Low due to the site's limited historical and lack of industrial use but accounting for the potential for localised contamination; and the risk posed to groundwater and surface water is Low. The risk posed to end-users from ground generating gases is considered to be Moderate/Low.
Recommendations	The following recommendations are made with regards to further works at the site: 1. Undertake an intrusive ground investigation; 2. Undertake a GQRA as part of the ground investigation; and 3. Undertake Ground Gas Monitoring. It is further recommended that this work is completed in advance of any development works taking place.

1.0 Introduction

1.1 Project Background

Curtins were instructed by Morgan Sindall to undertake a Phase 1 Preliminary Risk Assessment (PRA) of the existing Gorton Library site, Gorton, Manchester. The site is centred on National Grid Reference 388590, 396260.

This report has been undertaken in support of the proposed demolition of the existing library and the construction of surface level car parking in its place. It is understood that the existing area of hardstanding to the north of the site will be retained as a parking area. The proposed development plans (at the time of writing) are presented in Appendix A.

1.2 Scope of Services

The Preliminary Risk Assessment (PRA) is intended to provide an overview of the geo-environmental setting of the site. The report will develop a working preliminary conceptual ground model for the site as well as present an initial assessment of geo-environmental risks that could be presented to the future development of the site.

Specifically, the PRA provides an initial assessment of the site with regard to:

- a) Potential contamination of the site from historical and/or current use.
- b) The potential impact on the wider environment from historical and/or current use.
- c) The potential impact from surrounding land uses and other environmental factors.
- d) Potential risks associated with geological features such as faulting, mineral extraction, mining and land instability.
- e) The location of apparent sub-surface structures that may affect the proposed redevelopment.
- f) The location of above-surface features that may affect the proposed redevelopment.

The PRA is a desk-based exercise written using information provided from a desk based environmental study and any information made available to Curtins from the Client. The PRA can be utilised to inform the requirement for, and extent of, any future intrusive investigation work.

2.0 Current Site and Surrounding Area Details

2.1 Site Location and Current Details

Site use, location and description are shown below in *Table 2.1* and *Figure 2.1*.

Table 2.1 – Site Details

Site Address	Gorton Library, Gorton, Manchester, M18 MHE
NGR	388590, 396260
Area of Site	Approximately 0.29 Ha
Current Site Use and Description	The development site comprises the Gorton Library building with associated areas of hardstanding surrounding the perimeter of the building. Additionally landscaped areas are present in the west and south of the site boundary.

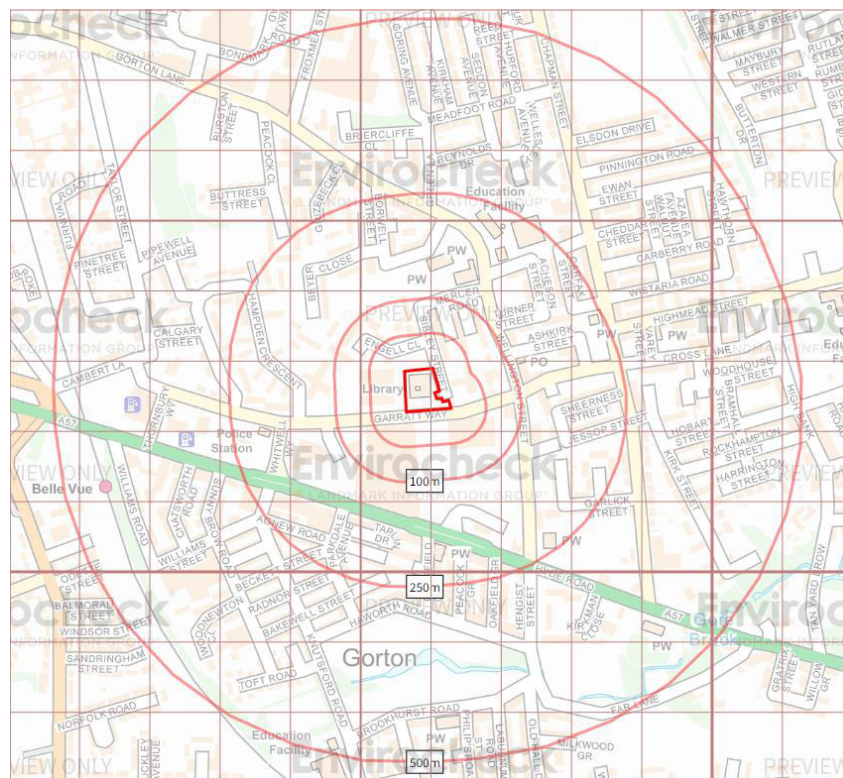

Figure 2.1 – Site Location Plan (site boundary shown in red)
Crown Copyright. License Number 100022432.

2.2 Surrounding Area Details

The following information was established through undertaking an environmental database search. The full Envirocheck report (Ref. 1) is included in *Appendix A*.

Table 2.2 – Surrounding Land Uses

Surrounding Area	N	Hardstanding Car Park serving library, Residential with areas of public open space beyond.
	E	Residential and commercial with areas of public open space.
	S	Garratt Way, Commercial beyond (Retail) with large area of hardstanding.
	W	Residential with areas of public open space.

3.0 Site History

A review of the available historical mapping and other information for the site, as presented within the Envirocheck Report (Ref. 1), has been undertaken and is presented in *Table 3.0* below.

Table 3.0 – Previous Site and Surrounding Area Uses and Potential Sources of Contamination. *Bold text refers to on-site activity.*

Date	Description	Potential Sources of Contamination
1840s to 1890s	Earliest available mapping (1848) records the site as undeveloped land. The surrounding area is also largely undeveloped with a small number of terraced housings located to the north, east, south and west of the site. A tramway is recorded approximately 130m south of the site running in a northwest to southeast orientation. The New Mill cotton mill is recorded 200m northeast of the site boundary. Agricultural land is recorded in approximately 180m northwest of the site.	• Uncontrolled deposition of Made Ground associated with development of tramway, housing and local industry. • Potential deposition of ash with agricultural practices or residential coal fires. • Potential localised deposition of coal tar associated with road construction. • Potential localised deposition of metals and organic contaminants associated with Cotton Mill.
1900s to 1930's	By 1908, terraced housing with associated roads/pathways are recorded on-site. By 1908 the surrounding area has been significantly developed with much of the surrounding area occupied with terraced properties. A rectory with associated open space is recorded immediately west of the site by 1908. By 1908, the Victoria Works are recorded approximately 250m southwest; and appears to be associated with machine tool manufacture. Moreover, a sawmill is recorded by 1908 approximately 200m southeast of the site. By 1933, this is recorded as the Highfield Works which appears to be associated with fur waste. By 1933, an allotment is recorded approximately 160m southeast of the site boundary. By 1933, Gorton Foundry and further works are noted from circa 400m northwest with extensive railways sidings and further works beyond.	• Uncontrolled deposition of Made Ground associated with development of housing, religious buildings and local industry. • Potential localised deposition of coal tar associated with road construction. • Potential localised deposition of asbestos, metals and organic contaminants associated with Victoria Works and Saw-Mill. • Potential deposition of ash associated with the allotment.
1950s to 1960s	The site remains largely unchanged. By 1951, a warehouse is recorded approximately 200m southwest from the site. Additionally, by this time the Highfield works appears to now be associated with the printing industry and is no longer recorded by 1963. By 1968, the Victoria Works is no longer recorded. Land previously undeveloped is occupied by housing by 1951 approximately 20m northeast of the site. By 1983, two new units described as works and two units described as depots are recorded approximately 160m	• Uncontrolled deposition of Made Ground associated with development of residential and commercial buildings. • Potential localised/spillages of hydrocarbons associated with warehouse/depots. • Potential localised deposition of metals and organic contaminants associated with printing industry.

Date	Description	Potential Sources of Contamination
	northeast. Additionally, by this time the Dell Care Home is recorded immediately west of the site boundary.	Potential localised deposition of coal tar associated with road construction.
1980s to 1990s	By the 1980s the site has undergone significant development and the terraced houses have been demolished. Gorton Library is constructed on the site by 1983. During this time period terraced houses in the surrounding area are demolished and replaced by new build residential properties by 1982. By 1982, the Gorton Cross center is constructed approximately 20m south of the site. By 1983, two new units described as works and two units described as depots are present approximately 160m northeast. By the 1990's a bath house is recorded immediately west of the site boundary.	- Uncontrolled deposition of Made Ground associated with demolition/development. - Potential asbestos deposition during demolitions works.
2000's to present	During this period the site is largely unchanged. By 2022, the Gorton Cross Centre is demolished and relaced by the Tesco supermarket. The surrounding area is mostly occupied by residential building with areas of public open space.	- Uncontrolled deposition of Made Ground associated with former demolition. - Potential asbestos deposition during demolition works. - Potential for contamination associated with former local industries.

Potential sources of onsite contamination are further discussed in *Section 6.0*.

4.0 Geology, Hydrogeology and Hydrology

4.1 Geology and Hydrogeology

A study of the Envirocheck (Ref. 1) Report and the British Geological Survey (BGS) 1:50,000 mapping records (Bedrock and Superficial Editions) for Manchester (Sheet 085) dated 2010 (Ref. 2) indicates the following geological and hydrogeological succession underlying the site:

Table 4.1 – Geological/Hydrogeological Succession

Geology	Associated Hydrogeological Classification
Made Ground deposits are not recorded on geological mapping, however, given phases of development on-site it is likely such deposits are present.	N/A
Superficial deposits – Till, Devensian¹	Secondary – Undifferentiated ³
Bedrock deposits – Chester Formation²	Principal Aquifer ⁴

Notes:

1. These comprise a group of sediments laid down by the direct action of glacial ice, usually sandy, silty clay with pebbles, but can contain gravel-rich, or laminated sand layers; varied in colour and consistency.
2. Conglomerates and reddish brown, cross-bedded, pebbly sandstones with subordinate beds of red-brown mudstone. The conglomerates have a reddish brown sandy matrix and consist mainly of pebbles of brown or purple quartzite, with quartz conglomerate and vein quartz. The formation generally fines upwards, from dominantly conglomerates at the base, to interbedded conglomerates and sandstones, with sandstone and pebbly sandstone predominant in the upper part, and rare mudstones. The formation has subordinate lenticular beds of reddish brown mudstone or siltstone throughout; these are more common in Cumbria.
3. Secondary undifferentiated are aquifers where it is not possible to apply either a Secondary A or B definition because of the variable characteristics of the rock type. These have only a minor value.
4. Principal aquifers provide significant quantities of drinking water, and water for business needs. They may also support rivers, lakes and wetlands.

BGS Records do not indicate the presence of Made Ground on site, however the site's history of construction and demolition suggests that Made Ground is likely to be present underlying the site.

There are several BGS recorded boreholes (Ref.3) recorded on site. However, these are confidential and have not been made available to Curtins for review. There are four available historical boreholes within 200m of the site boundary. A summary has been included within *Table 4.2* below.

Table 4.2 – BGS Borehole Records

Record Reference	Location (NGR)	Details (Bottom to top of strata/details/thickness of strata)	
SJ89NE1182	183m southwest (388350, 396170)	1.40m bgl	Brick FILL (1.40m)
		2.00m bgl	Firm grey/brown silty CLAY with occasional pebbles (0.60m)
		7.00m bgl	Stiff brown silty CLAY with occasional pebbles and sand inclusions (5.00m)
		7.00m bgl	borehole termination

Record Reference	Location (NGR)	Details (Bottom to top of strata/details/thickness of strata)	
SJ89NE1181	102m south (388550, 396120)	1.20m bgl 7.00m bgl 7.00m bgl	Brick FILL (1.20m) Firm to stiff brown silty CLAY with occasional pebbles (5.80m) borehole termination
SJ89NE1183	173m southeast (388590, 396060)	1.30m bgl 8.00m bgl 8.00m bgl	Cinder and brick FILL (1.30m) Very stiff to hard brown silty CLAY with pebbles (6.70m) borehole terminated
SJ89NE1178	182m southwest (380300, 388080)	1.00m bgl 2.60m bgl 7.00m bgl 7.00m bgl	Brick FILL (1.00m) Firm brown silty CLAY with occasional pebbles (1.60m) Stiff brown silty CLAY with occasional pebbles and sand inclusions (4.40m) Band of soft brown silty clay at 5.00m borehole terminated

There are no BGS recorded faults onsite or within 1000m of the site boundary.

The site is not located within an Environmental Agency Source Protection Zone (SPZ). There are no groundwater or surface water abstractions located within 1km of the site.

4.1.1 Mining

A review of the Coal Authority interactive mapping (Ref. 4) for the area indicates that the site is located within a coal mining reporting area. Despite this, the site is not located within a development high-risk area and there are no mine entries, past/probable shallow coal mine workings or coal outcrops located within 1km of the site. Therefore, the risk to development from historical coal mining is considered to be **Low** and has not been considered further.

There are no recorded mineral sites within 500m of the site.

4.1.2 Other Ground Stability Issues

The Envirocheck Report (Ref. 1) confirms that there is a no hazard to very low risk from the following ground stability hazards on the site; collapsible ground, compressible ground, ground dissolution, landslide ground, running sands and shrinking or swelling clay.

4.1.3 Ground Gas

There are no registered landfills or active licensed wastes management facilities within 500m of the site boundary. There are two historically infilled land (water) within 100m of the site which have been detailed in *Table 4.3 below*.

Table 4.3 – Historically infilled land associated with water and non-water

Map ID	Details	Date of Mapping	Distance from Site (m)
76	Potentially Infilled Land (water)	1895	72 N
77	Potentially Infilled Land (water)	1848	95 NW

The BGS Radon Mapping (Ref.5) confirms the site is situated in a lower probability radon area where <1% of homes are at or above the radon action level. On this basis, radon protection measures are not considered necessary in the construction of new dwellings or extensions. If the new development incorporates a basement, the advice of a specialist Radon assessor must be obtained.

4.2 Hydrology

The nearest surface water feature is the Gore Brook approximately 340m south of the site.

There have been six pollution incidents to controlled waters recorded within 500m of the site. All incidents are classified as a Category 3 (minor) incident and have been detailed in *Table 4.4* below.

Table 4.4 – Pollution Incidents to Controlled Waters

Location	Date	Pollutant	Incident Severity	Distance from site (m)
Greater Manchester	05/06/1996	Miscellaneous fire water/foam	Category 3 (Minor Incident)	224 N
Gore Brook	15/06/1998	Miscellaneous – inert suspended solids	Category 3 (Minor Incident)	430 S
Gore Brook	24/08/1998	Miscellaneous – inert suspended solids	Category 3 (Minor Incident)	435 S
Greater Manchester	09/03/1994	Unknown	Category 3 (Minor Incident)	433 S
Greater Manchester	04/02/1992	Unknown	Category 3 (Minor Incident)	438 S
Tibbett & Bitter	19/06/1997	Oils – Diesel (including agricultural)	Category 3 (Minor Incident)	446 NW

There is one discharge consents within 500m of the site which has been detailed below in *Table 4.5*.

Table 4.5 – Discharge Consents

Operator	Issue Date	Revocation Date	Discharge Type	Distance from site (m)
United Utilities Water Limited	01/01/1995	Not Supplied	Public Sewage: Storm Sewage Overflow	492 SE

5.0 Unexploded Ordnance Risk Assessment

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

The likelihood of UXO being encountered on a development site is influenced by several factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. To determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry (Ref. 6) with the following commentary considered to represent a Preliminary Risk Assessment intended to guide if and where there is a requirement for a Detailed Risk Assessment.

5.1 Preliminary UXO Assessment

Risk mapping (Ref. 7) for UXO's has placed the site in a **Moderate**-risk area. Areas designated as moderate risk are those that show a high density of bombing hits (15-49 bombs per 1000 acres).

The area in and around Manchester generally escaped the worst of Britain's WWII bombing, particularly when compared with other major UK cities, such as Liverpool or London. Furthermore, the peripheries of Manchester were only bombed sporadically, with the major targets in the city consisting of the port, city centre and industry in Stretford.

A review of the available historic mapping shows no ruins on or within 250m of the site. No buildings or areas of development are suddenly demolished in post-war mapping. Additionally, review of available bomb damage mapping for Gorton, Manchester (Ref.8) shows no ruins on site or within the surrounding area. Figure 5.1 overleaf shows an extract of this map, with the site boundary imposed.

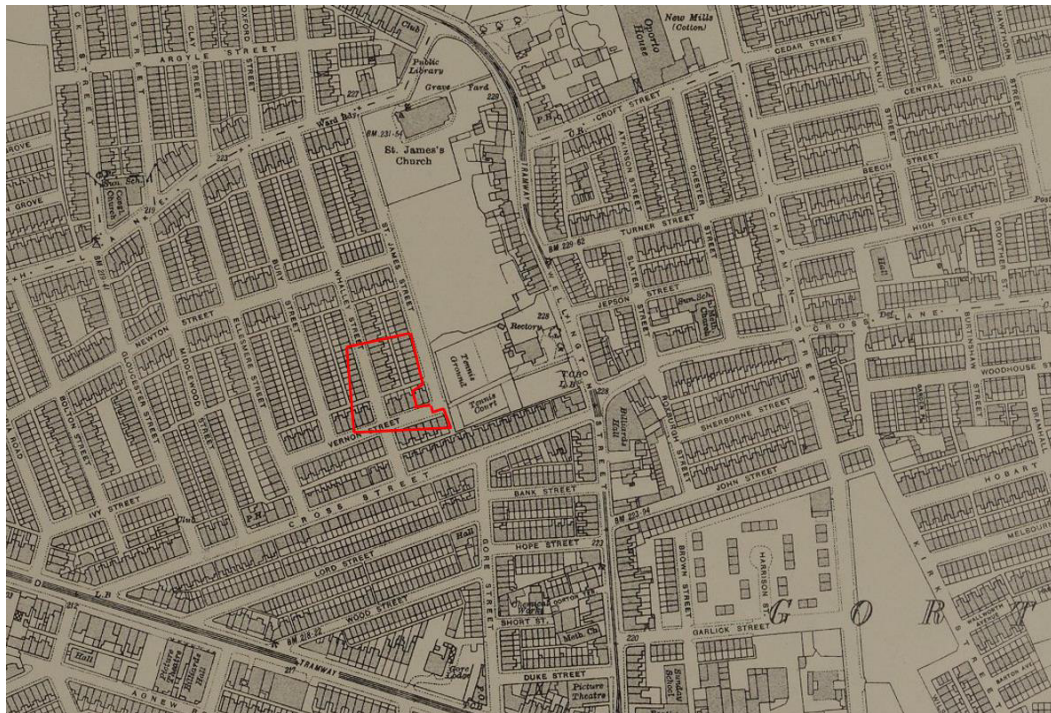

Figure 5.1 – WWII Bomb Damage Mapping

(Site boundary shown in red. Red circles for fire bombs; blue circles for high explosives; pink shading for damaged buildings; red shading for demolished buildings).

During WWII and the years immediately following the site was occupied by terrace properties. Furthermore, the site has undergone significant demolition and redevelopment during the 1970's and 1980's when the current site layout was established. This occupancy of the site during the war period and phases of redevelopment increases the possibility that if UXO was present on site it would have been recorded, found or removed during previous construction works.

Based on the forgoing commentary, the likelihood of encountering UXO on site as part of the ground investigation is **Low**, and on this basis no further action is considered to be required for Curtins ground investigation works. Contractors undertaking their own excavations should undertake their own risk assessments with specialist input where required.

If unexploded ordnance is discovered, stop immediately, prevent access to the area, and inform the police. If the site boundary or location changes then the UXO risk should be reassessed.

6.0 Conceptual Site Model & Qualitative Risk Assessment

The conceptual site model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table within this section.

The CSM details the source-pathway-receptor linkages or potential pollutant linkages (PPL) that have been identified for the site. The QRA details the associated level of risk relating to these potential pollutant linkages.

The CSM and QRA concern risk to human health and water environment with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in *Section 6.1* below.

The QRA follows the framework outlined within CIRIA C552 (Ref. 9) which is summarised within *Appendix B*.

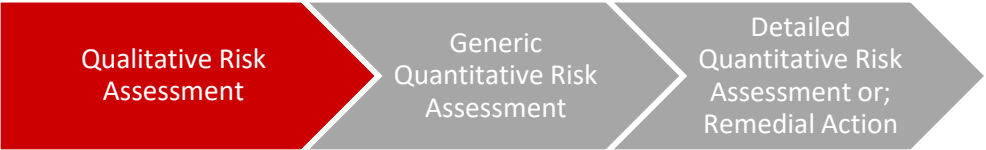

The 'risk rating' within the QRA refers to the risk that the source, pathway, receptor linkage or PPL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

6.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but nonetheless can be of critical importance to the onward development of the site:

- The risk presented by Mining is discussed and assessed in *Section 4.1.1*.
- The risk presented by Radon is discussed and assessed in *Section 4.1.3*.
- The risk presented by Unexploded Ordnance is discussed and assessed in *Section 5.0*.

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations, 2015 (Ref. 10) which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works on site will be undertaken in compliance with these requirements.

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- For a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e., low to very low risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made to have sufficient confidence to support a risk characterisation or management decision, e.g., remedial action.
- In the absence of specific site data, a Generic Quantitative Risk Assessment is invariably recommended.

Conceptual Site Model			Qualitative Risk Assessment			Recommended Actions
Source	Pathway(s)	Receptor(s)	Consequence	Likelihood of Occurrence	Risk Rating	
On-site sources of potential contamination: Uncontrolled deposition of Made Ground associated with the construction/demolition onsite associated with terraced housing and current library building. <i>Potential contaminants of concern associated with the above sources include heavy metals and asbestos.</i> Off-site sources of potential contamination: Potential contamination associated with the former industries, warehouses and depots. Albeit noting industry typically >100m from site. <i>Potential contaminants of concern associated with the above sources include a range of metals, organic petrol and diesel range hydrocarbons, and Poly-cyclic aromatic hydrocarbons (PAHs), and asbestos.</i>	Direct contact, ingestion, inhalation (dust and vapours)	End users of site Carpark staff and visitors	Medium Chronic health risk	Low Limited previous development on site (residential and Library building), it is considered the likelihood of encountering contamination within Made Ground deposits is Low.	Moderate / Low	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.
	Vertical migration through the superficial deposits (soils)	Controlled Waters (groundwater) Principal Aquifer (bedrock) Secondary Undifferentiated Aquifer (superficial deposits) No groundwater abstraction points within 1km of the site. Not within a designated Source Protection Zone.	Medium Pollution of sensitive water resources	Unlikely Low permeability Superficial Secondary Undifferentiated Aquifer and a lack of water abstractions and SPZs limits the pathways-receptor linkage	Low	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.
	Horizontal migration over and through the superficial deposits (soils)	Controlled Waters (surface water) Nearest surface water course is Gore Brook, 340m south of the site. No surface water abstraction points within 1km	Medium Pollution of sensitive water resources	Unlikely Considering the distance from the site to the nearest surface water receptor, this pathway is considered unlikely.	Low	No further action required.
On-site sources of potential ground gas: Potential ground gas generation from Made Ground deposits containing organic/ putrescible content.	Vertical and horizontal migration through existing service corridors and Made Ground.	End users of site Carpark staff and visitors	Medium Chronic health risk	Low Likelihood Considering the unlikelihood of extensive organically rich Made Ground or natural deposits at the site, the potential for ground gas generation is considered Low.	Moderate / low	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.

7.0 Conclusion and Recommendations

The qualitative risk assessment (QRA) determined an overall Low to Moderate level of risk to future site users and risk from ground gases whilst a low level risk to controlled waters associated with the proposed development. The QRA concluded that further requirements comprising a generic quantitative risk assessment (GQRA) are required to determine the potential contamination risk on-site and to confirm ground conditions.

It is recommended that the GQRA are conducted as part of a ground investigation in support of the engineering design of the proposed development an outline scope for which is detailed in the section hereafter. In summary, the following recommendations are made:

- Undertake an intrusive ground investigation;
- Undertake a GQRA as part of the ground investigation; and
- Undertake ground gas monitoring.

It is further recommended that the site investigation works are completed in advance of any development works taking place.

7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Conceptual Site Model in *Section 6.0* of this reporting include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); inorganic compounds including heavy metals; and asbestos present in discarded building materials.

7.2 Other Considerations

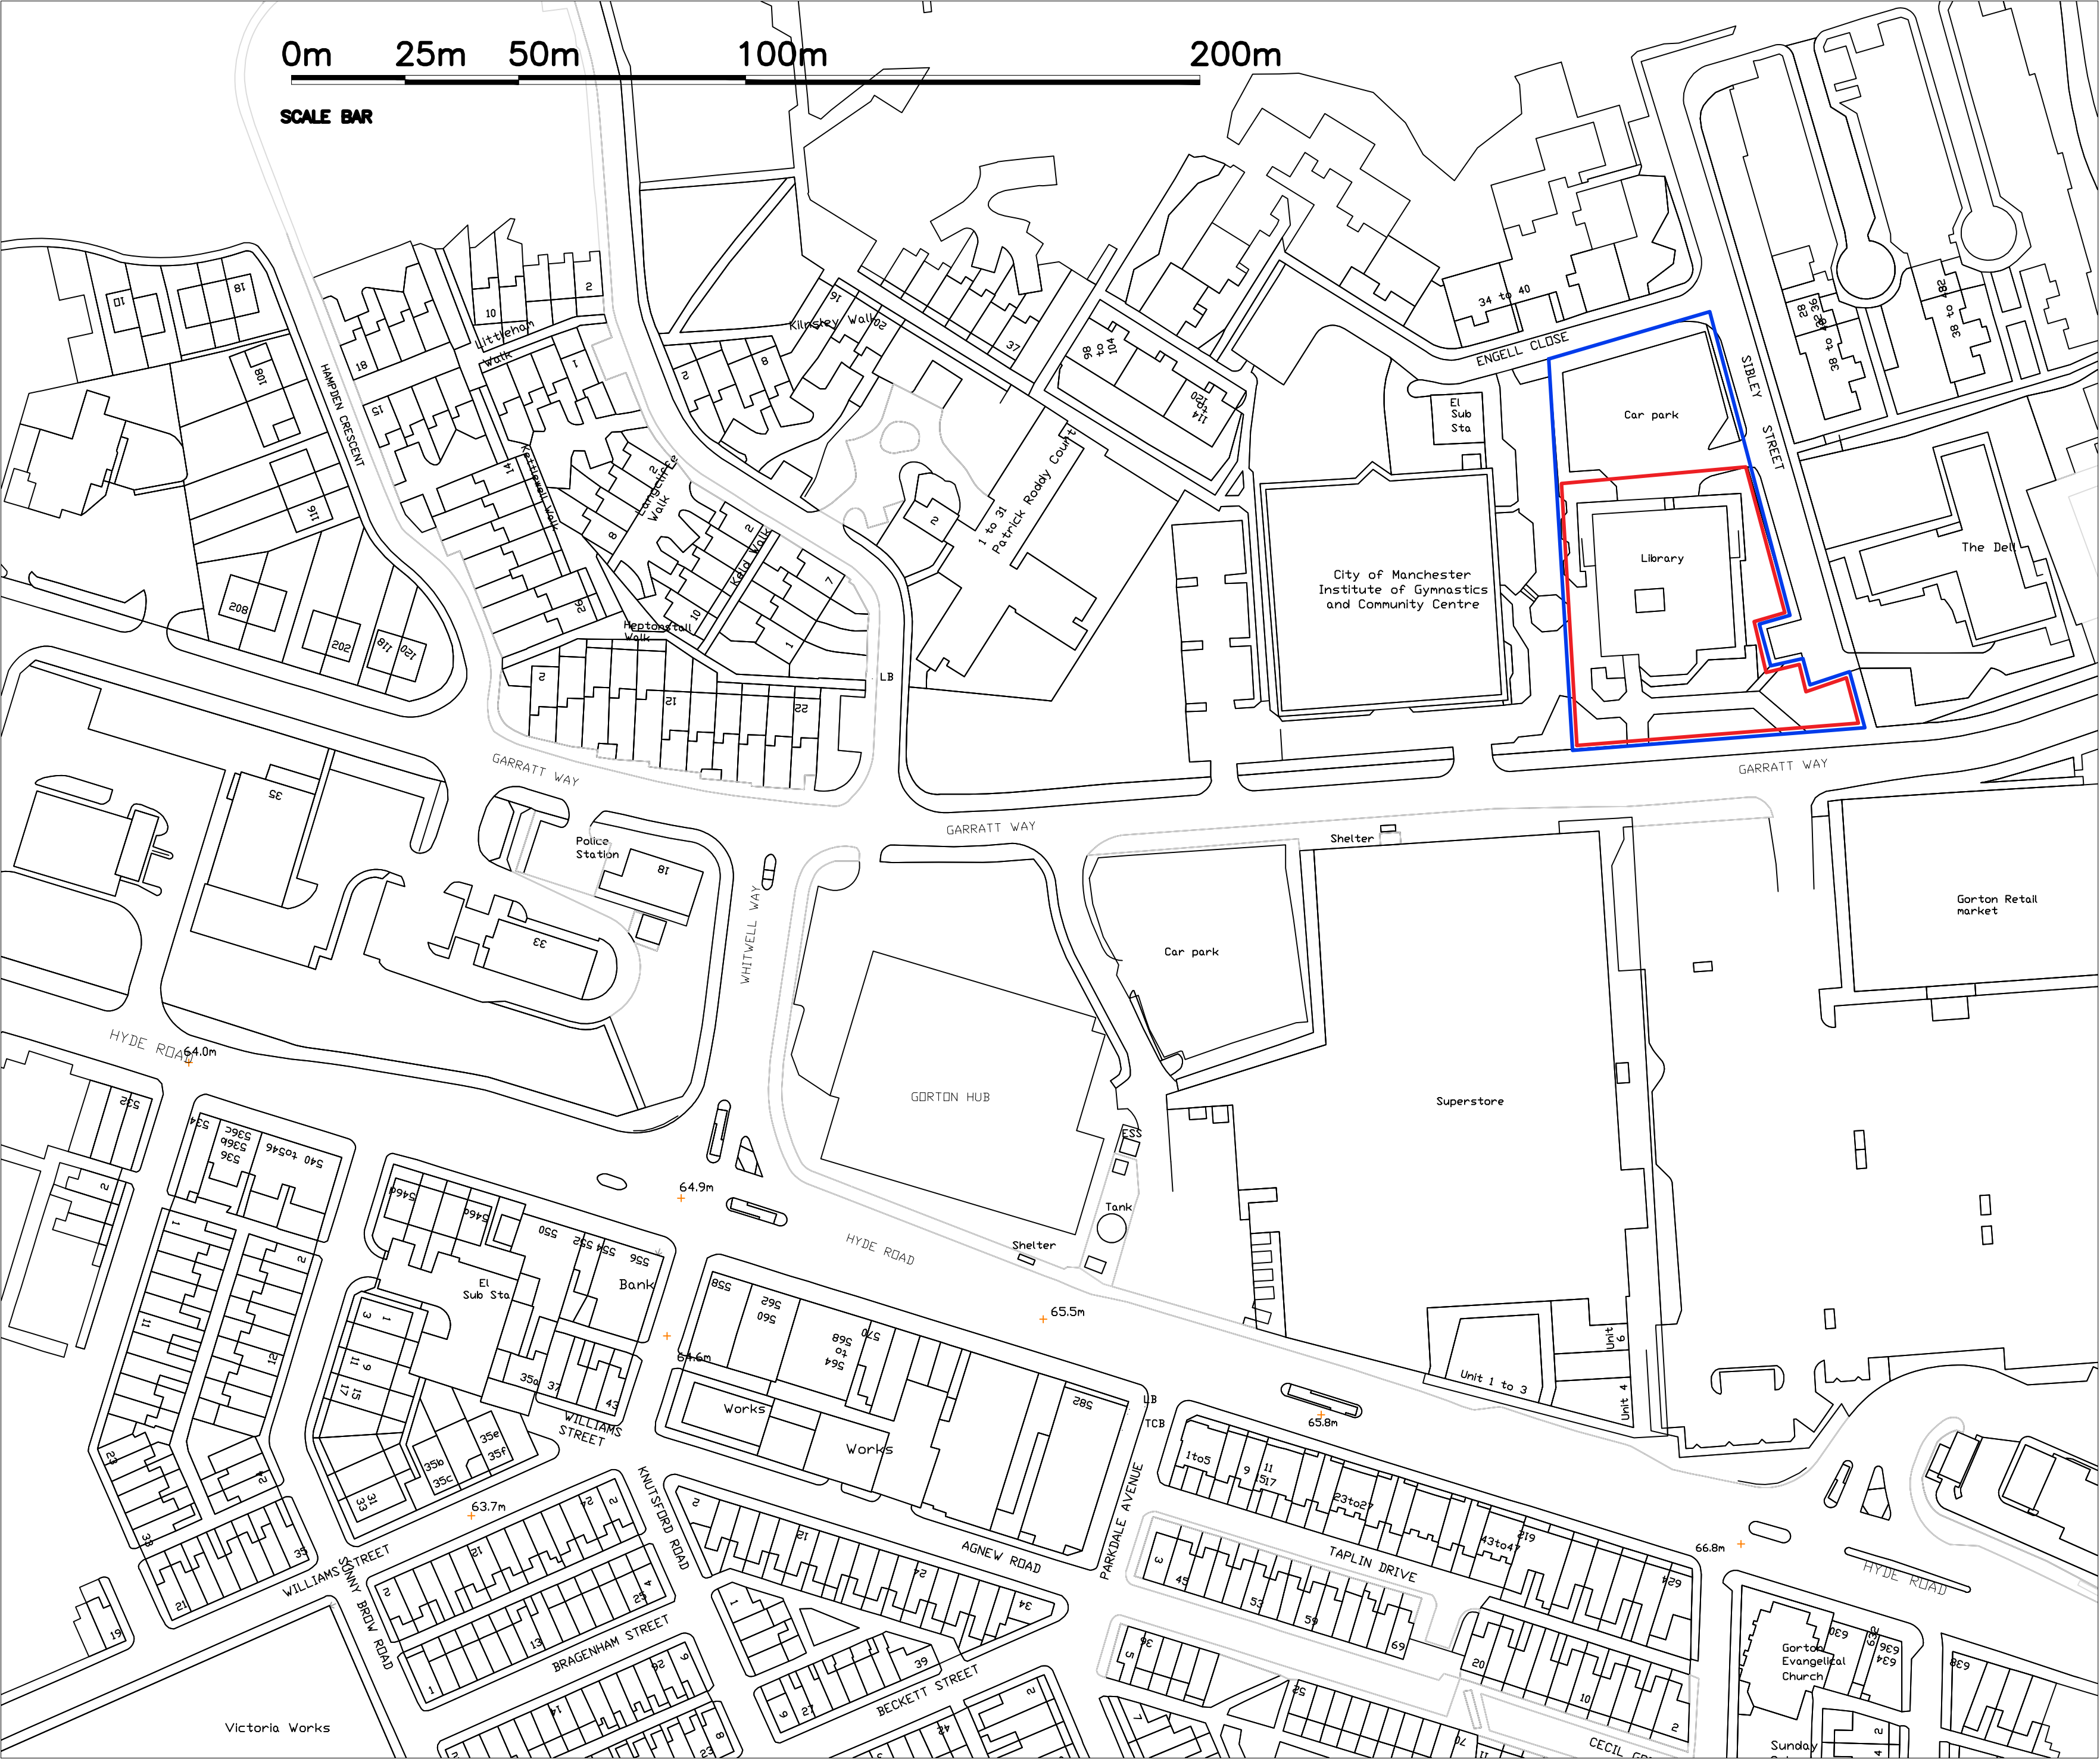

There may be subsurface obstructions, voids and relic foundations associated with the former terraced houses onsite.

The requirement for additional surveys, e.g. arboricultural and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
