

External Lighting Strategy – 202-204 Dantzic Street

The external lighting design to the 202-204 Dantzic Street has been carried out in accordance with the latest design standards.

Lux levels across the site meet the requirements set out for standard roadways in typical residential areas. The illuminance levels will provide the venue with sufficient lighting to perform outdoor visual tasks efficiently and accurately.

The design follows the principles outlined in the Institution of Lighting Professionals. Any light that does not meet the required levels of spill light can be mitigated through the use of backlight shields if necessary.

Please refer to the following images for the proposed lighting layouts and colours.
