

Whitehouse Club, Middleton Road, Crumpsall

### **Waste Management Strategy**

This Waste Management Strategy has been prepared by Grays Architecture Ltd on behalf of Dappa Homes Ltd, in support of the planning application submitted for the club development at the Whitehouse Club in Crumpsall.

The strategy proposes to review the required movements to and from the bin store, along with the associated refuse storage requirements.

The proposed site plan drawing prepared to accompany application indicates the layout for the bin store, which includes:

- 2no. 1100l Eurobins and 3no. 240l Wheelie bins consisting of separate bins for residual waste, pulpable materials, food waste and co-mingled materials.
- 4no. 240l Wheelie bins allowing for recyclable and non-recyclable waste for the on-site accommodation.

The bin store is positioned along the south boundary of the site at the rear of the club building which allows ease of access for all building users whilst being sufficiently distanced to ensure no nuisance will be created for the external amenity area.

The bin store position allows for direct refuse collection from the new road proposed within the development. If additional bins are required within the store these can be accommodated without compromising the development.
