PARK GROVE, MANCHESTER, M19 3AQ
PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A commercial development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination, landfill gas and geotechnical issues.

SITE DESCRIPTION

The site is irregular shaped, about 40 by 26 metres, located to the north of Park Grove in Manchester and at OS Grid Reference 387287, 394673. The site, inspected on 12/04/2022 by Mr M Whitaker (Geotechnician), comprises a dilapidated single storey building at the west/middle (used as a mosque), with a surrounding tarmac surfaced car park. The building has part pre-cast concrete, part brick wall, part flat roof and part asbestos cement sheet roof. At the northeast corner is a single storey brick, garage with modern sheet metal roof.

To the north, south and west are houses and to the east is offices/classrooms. The area is generally level with a gentle slope down to the northwest from the site.

PROPOSED DEVELOPMENT

It is proposed to demolish the existing building and build a two storey community centre with associated car park and limited landscaping.

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

TREES

There are deciduous trees, up to about 15m high, off-site, along the north and west boundary. This is not an accurate arboricultural survey.

NOT INCLUDED IN THE REPORT

- Arboricultural or Invasive Plant Survey (Japanese Knotweed etc.).
- Asbestos Survey
- Mining Risk Assessment.
- Flood Risk Assessment.
- Underground Services Survey.

General comments may be made where they are applicable to the environmental and geotechnical risk assessment. These do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 04/04/2022
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 12/04/2022

This report is referred to as a Preliminary Risk Assessment (PRA), alternative names are 'Phase I' Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Discharge consents
- Substantiated pollution incidents
- Water abstraction points or Source protection zones
- Landfill sites
- Hazardous substances sites
- Sensitive land uses

Geology of Site

The geological map indicates that the underlying solid rocks are sandstone of the Chester Formation.

Surface drift is shown as glacial till (boulder clay) of unknown thickness and natural subsidence hazards are shown as very low to no hazard.

Radon

The site is in a lower probability radon area as less than 1% of homes in the area are above the radon action level. Radon protection measures are not required.

Surface Water (Hydrology)

There are no rivers or streams close to the site, the nearest being Fallowfield Brook 782m south.

The only pollution incident to surface water listed within 250m was 96m east – Minor incident of Fire water / foam to Mersey in 1996 *

* not relevant due to distance/severity/significance

Flooding (General)

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes, blocked drains, sewers and culverts
- inadequate drainage, cloudbursts/flash flooding overwhelming drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding

The site is shown to have limited potential for groundwater flooding to occur.

Flooding from Rivers

The site is shown to be clear of flooding from rivers.

Surface Water Flooding

The site is shown to be clear of surface water flooding.

Groundwater (Hydrogeology)

The solid rocks under the site are indicated as a Principal aquifer.

Superficial (drift) deposits are classed as a Secondary Undifferentiated aquifer.

Filled Ground

Within 250 metres of the site there are the following suspected filled features:

- 19m and 241m south
- 139m southwest
- 229m northwest

Nearby Industry

There is 1 LAPPC listing, 132m north at a Petrol Filling Station, 1999, Authorisation Revoked *

There are 7 trade directory entries listed within 100m, as follows:

- Immediately west – Power transmission equipment – Inactive
- 17m east – Sports equipment manufacturers and distributors – Inactive *
- 21m northeast – Garage services – Active
- 51m north – Car dealers: used – Inactive *
- 48m east – Garage services – Active *
- 74m southeast – Vacuum cleaners: sales and service – Inactive *
- 77m southeast – Reclamation centres – Active *

* not relevant due to distance/severity/significance

SITE HISTORY

Date	On Site	Off Site
1848 (1:10,560)	Stream runs along north of site.	Pond immediately south, 25m south and 120m southwest. Houses 30m northeast.
1894 (1:10,560)	Houses on east and west of site. Stream not present, presumed culverted and road runs along north side.	Ponds filled and surrounding area demolished for housing. Public house 60m northeast. Railway 70m southwest.
1907 (1:2,500)	Housing on-site more clearly defined.	Housing immediately west.
1923 (1:10,560)	Little or no change.	No relevant change.
1951 (1:2,500)	Housing on east of site, demolished.	Garage 125m northeast. Coal yard immediately northeast. New building immediately east, possibly commercial.
1974	Houses demolished and British Legion Club built on west, with a cluster of buildings at centre of site and possible garage/workshop on the east.	No relevant change.
1980 (1:1,250)	British Legion is now a works. Buildings at centre demolished. Building on east is a garden centre.	Houses to north and west demolished.
1995 (1:2,500)	Little or no change.	Houses built 10m north.
2006 (1:10,000)	The only building now present is on the west of site, possible works.	Sports Complex 140m northwest.
2022 (1:10,000)	Garage at northeast corner.	Site is located in a residential area with houses 15m west.

DISCUSSION

Contamination

The site was originally developed for housing, replaced by a club (west) and a commercial building (later a garden centre) at the east, when the houses were demolished. The club later became a works. A stream was originally shown to cross the north of the site, and it is likely that made ground will be present in that area. Similarly, if the original houses had basements, made ground up to 2-3m deep may be present. The works/commercial use are potential sources of contaminants, as is made ground, and demolition rubble if this was left on site. Levels are not expected to be significantly high enough to pose a risk to a community centre.

There was a commercial building to the east, most recently supplying power transmission equipment. This is not considered to pose a greater risk to the site than the previous developments on site itself.

The proposed development will be a community centre with parking and limited landscaping. Potential pollutant linkages are considered to be:

- Direct contact with soil.
- Ingestion of soil.
- Inhalation and ingestion of dust.
- Sulphate attack on buried concrete.
- Contaminants entering drinking water pipes.

A low risk is anticipated to end-users

Controlled Waters

There is an underlying Principal aquifer beneath clay. There are no nearby abstraction points, source protection zones or water courses.

The small landscaped areas will allow limited opportunity for rainwater to pass through surface soils. Furthermore, contaminants are not expected at high levels and the underlying clay will impede the migration of water, no risk is expected to controlled waters.

Landfill Gas/Ground Gas

Although there are no landfill sites within 250m, there are several filled features within 250m. These are small, potential sources, of ground gases, however, the underlying clay is expected to impede the passage of gas from off-site sources, and not pose a risk.

There is probable made ground on-site, possibly up to 2-3m at most if basements were present and most likely demolition rubble. This would be expected to have a very low to low gas generation potential at worst and a very low to low risk.

Radon

Radon protection measures are not required.

Flooding from Rivers

The Environment Agency maps show that this site is clear of flooding from rivers.

Groundwater and Surface Water Flooding

The site is shown to be clear of areas of surface water flooding.

The site is shown to be in an area with limited potential for groundwater flooding to occur.

Foundations

It is expected that there will be made ground overlying clay, and a range of foundation options may need to be considered.

If foundations are to be on clay the shrinkage potential of the clay needs to be determined, to ensure foundations are below the potential effects of tree root shrinkage.

Culvert

Historical maps show a stream originally run across the north of the site. This may have been culverted when the area was developed, and may cross the north of the site. If present, this may present difficulties for excavations.

INDUSTRY PROFILE

The site was formerly occupied by houses and later a British Legion Club, works and garden centre.

Industry	Possible Contaminants
Works/Garden Centre/Made Ground	Metals: copper, zinc, chromium, nickel, lead, cadmium, arsenic, Inorganic compounds: cyanide, sulphates Phenols VOCs Mineral oils, fuel oils (TPHs) Asbestos PCBs General hydrocarbons (PAHs)

CONCEPTUAL MODEL

A conceptual model based on the source-pathway-receptor concept is included with this desk study to show the potential pollutant linkages with this site.

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users	Inhalation	Yes
	Off-site	Migration off-site	Possible
Inorganic contaminants	End-users	Direct contact, ingestion, inhalation of dust	Unlikely
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Sulphate	Building fabric	Concrete directly in contact with soil	Yes
Hydrocarbons	End-users	Direct contact, ingestion, inhalation of dust	Possible
	Service pipes	Seeping into drinking water pipes	Yes
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbon vapours	End-users	Inhalation of vapours indoors and outdoors	No
Landfill gas	End-users - in buildings	Seeping into buildings, explosion, asphyxiation	Possible
Radon	End-users - in buildings	Seeping into buildings	No

CONCLUSION

Contamination

Taking into account the history of the site it is considered that contamination may be present. However, bearing in mind the proposals for the site, only a very low risk to end-users is expected.

An intrusive investigation is required, consisting of boreholes/ trial holes and tests to confirm the presence/absence and extent of contamination on the site. There are no specific point sources for contamination.

Controlled Waters

No risk to controlled water is expected and no further action is considered necessary at this stage. This may need to be reviewed following the soil tests.

Landfill Gas/Ground Gas

There are nearby filled features and possible made ground on-site. A very low to low gas risk is expected. A gas testing programme is required, 4 tests over 1 month being suggested.

Radon

Radon protection measures are not required.

Flooding

The EA maps indicate that the area is clear of flooding from rivers.

The maps indicate that the area is clear of surface water flooding.

These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. For greater confidence a detailed flood risk assessment should be obtained.

Foundations

A series of boreholes are required in the area of the proposed building to allow the most suitable foundations to be designed.

Plasticity tests are required to confirm the shrinkage potential of the clay.

Culvert

The historical maps suggest a possible culverted water course on the north of the site. It is suggested that this is investigated further.

Yours faithfully

1. This report should be considered in relation to the objectives agreed between Worms Eye and the Client, outlined in the introduction.
2. For the work, reliance has been placed on publicly available data, obtained from the sources identified in the report. The information is not exhaustive and further information may be available from other sources. When using the information it has been assumed it is correct, and no attempt has been made to verify the information.
3. This report has been produced in accordance with current UK policy and guidelines, for land and groundwater contamination, enforced by the Local Authority and the Environment Agency.
4. During the site walkover, reasonable effort was made to obtain an overview of the site. However, no attempt was made to enter areas that are unsafe, a risk to health and safety, locked, barricaded, overgrown, or areas not made accessible.
5. Access, the presence of services and activities on the site, limited locations where sampling could be carried out and the techniques that could be used.
6. Assessments are based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.
7. The conclusions and recommendations provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.
8. Worms Eye cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright of this report, and other plans or documents prepared by Worms Eye, is owned by them, and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies may be made and distributed by the client, as expected, in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability, or warranties, shall be extended to other parties by Worms Eye, without their written agreement.
9. New information, revised practices, or changes in legislation, may necessitate the re-interpretation of the report, in whole or in part.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

LANDMARK INFORMATION GROUP®

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan

Published 1965 - 1968

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Site Details

Al Raza Foundation, 12-16, Park Grove, MANCHESTER, M19 3AQ

The site comprises a small building, used as a Mosque, with a tarmac surfaced carpark, formerly a works, garden centre, club and house,

Possible contaminants: Heavy metals, Cyanide, Sulphate, PAHs, TPHs, Asbestos, VOCs and PCBs.

Low risk to end-users expected.

No risk to controlled waters likely.

Very low to low ground gas risk anticipated.

Radon protection not required.
