

Authentic City Church - Transport Statement

Site location plan with transport routes

Existing Use

- Location: Authentic City Church, Crowcroft Road, Longsight, Manchester, M12 4QD
- The church has been in use as a place of worship since its construction in 1957.
- The church has creche and youth facilities in which parents can leave their children whilst they attend services in the main building.
- The creche facilities have been in place since a planning application was granted in 1986 (ref: 026485).
- There have been no issues caused by transportation up to the present day.
- Stockport Road is a major artery and is connected via many bus routes.
- The church building sits in a largely residential area.

Proposed Improvements

- The proposed extension replaces the existing 1986 building which is of low build quality and is unsuitable for use.
- The size of the church dictates the amount of worshippers using the ancillary creche facilities. As there will be no increase to the number of worshippers (as the capacity of the worship hall is not increasing) it can be demonstrated that no additional traffic, parking or transport load will be imposed on the site by the proposed building.
- The new building is around 200 m2 of space and the existing creche / youth facility is around 110 m2. The increase in space provided will allow the church to better accommodate the children of the existing church goers but will not increase the amount of people using the main church.

Conclusion

- No additional person-trips will be created by the replacement of the existing 1986 creche facility.
