

This architectural drawing shows a section of a building facade. The main wall is constructed of brick. It features three windows: a small square window with four panes in the upper left, a larger rectangular window with six panes in the center, and a tall, narrow vertical window on the right. Below the central window is a small, recessed area with a horizontal line, possibly a door or a decorative element. To the right of the brick wall, there is a sloped section with vertical lines, likely representing a roof or a different material. The drawing is a black and white line art, typical of architectural blueprints.
