Simple to install. Just watch.

A key principle in the DuraPost® design brief was making it simple, both to install and to live with. To support you in the installation process each DuraPost® product has an installation video. Whether installing posts, panels or accessories, you will find a video to guide you through the process on our YouTube channel.

DuraPost® - Inspired by the outdoors

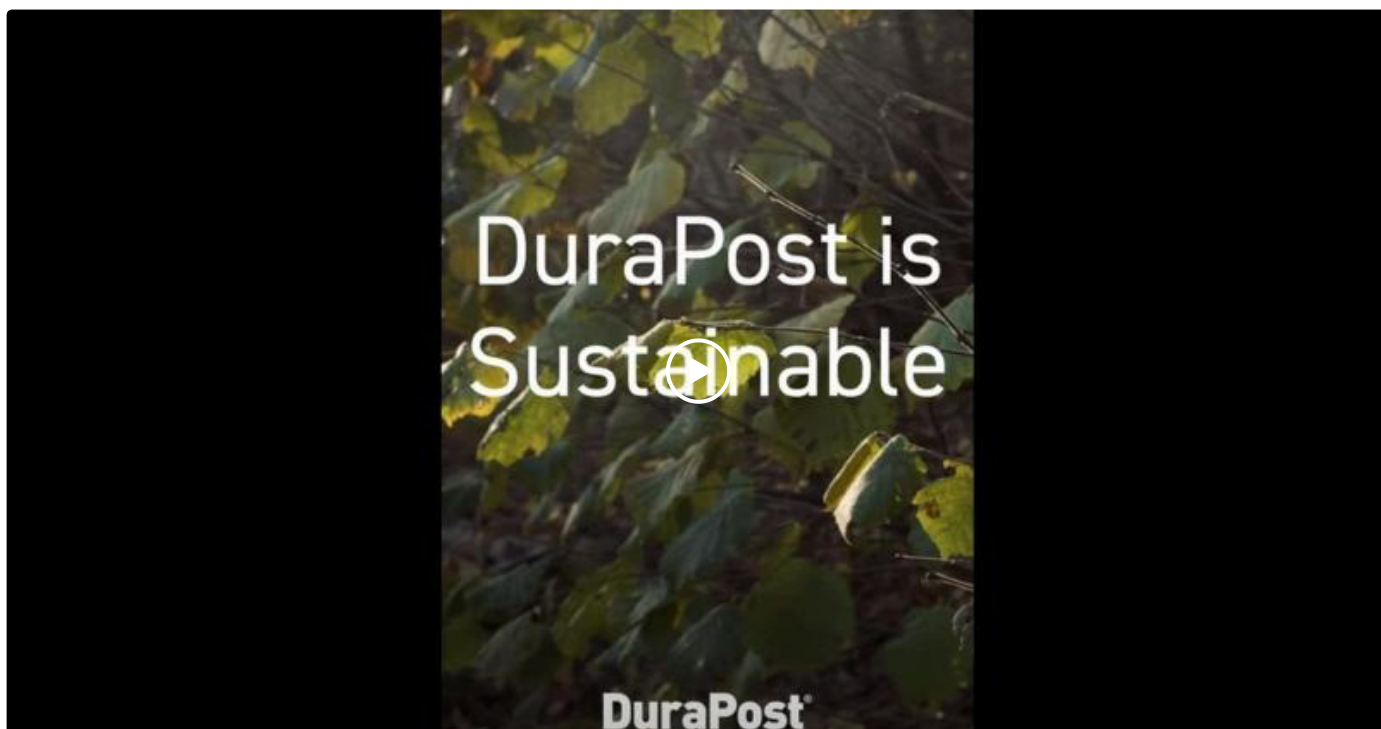

Why choose DuraPost®?

We believe every garden or outdoor space deserves to be framed with stunning fencing. In DuraPost®, we have created a modern, stylish fencing system that combines timeless design with advanced, long-lasting materials, able to withstand the forces of nature. Developed around an innovative H-shaped post design, the DuraPost® system comprises sturdy cold rolled galvanised steel posts, and durable composite panels that won't rot or crack. Manufactured to exacting standards by experienced UK designers and craftspeople, DuraPost® embodies the sustainable principles to which our zero-carbon business is committed. Effortless to install, maintenance-free, and backed by our guarantee of up to 25 years, DuraPost® will help you embrace the joy of your great outdoors.

DuraPost® - Unlike timber, it's designed to go the distance

DuraPost® thrives in the UK's harsh, unforgiving conditions. Impervious to the rotting or cracking of its wooden or concrete predecessors, it offers year after year of reliable, maintenance-free service. DuraPost® has also been exhaustively tested to withstand the high winds that each year reduce thousands of fences to firewood. The DuraPost® system is available in a selection of rich colours, designed to enhance and complement the natural features of any outdoor space. And at a fraction of the weight of concrete posts, it can be installed quickly, easily, and with confidence.

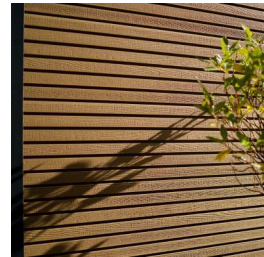

DuraPost® - A core of steel

Crafted in the UK from sustainable materials (made from 50% recycled steel and 100% recyclable at end of life), DuraPost® steel fence posts not only enhance your environment, but are kinder to the world beyond it. The foundation of the DuraPost® system is the robust yet lightweight cold rolled galvanised steel post. Weighing 80% less than the equivalent concrete post, its unique H-shaped design was born of our team's unrivalled insight and experience in fencing. DuraPost® offers the flexibility to work with almost any fence panel or board. Trusted by fence installers across the UK, DuraPost® fence posts are widely used with both traditional fencing materials and our composite panels. DuraPost® delivers performance and long-term resilience unmatched by wooden and concrete alternatives.
