The Manchester Royal Infirmary (MRI) is a major teaching hospital and a key component of the Manchester University NHS Foundation Trust.

Located in the heart of Manchester, it provides a wide range of acute healthcare services, including specialist treatments in cardiology, oncology, and trauma care. The hospital campus comprises a mix of historic and modern buildings, with several multi-storey wards, outpatient facilities, and support services.

The site is characterised by high operational activity, with complex logistics and strict safety protocols to ensure uninterrupted patient care, therefore, the buildings that make up the MRI estate typically feature numerous pieces of plant equipment required to keep the hospital functional.

To the north of the MRI site, lies the University of Manchester campus, an area characterised by a high number of buildings in educational uses.

To the east and west of the MRI site lie two arterial roads that lead to the heart of Manchester City Centre, Oxford Road and Upper Brook Street.

This site is not within a conservation area.

There are several listed buildings on the MRI site:

- St Marys Hospital (Grade II)
- Former Lodge of Royal Infirmary (Now Royal Bank of Scotland), Railings and Four Pairs of Gatepiers (Grade II)
- Royal Infirmary (Cobbett H, Admin/drs Res Block, X Ray Teaching Block and Chapel) (Grade II)
- Royal Eye Hospital (Grade II)
- The Pankhurst Centre (Grade II*)
- 60, Nelson Street (Grade II)

The four buildings in the MRI site that this application is concerned with are:

- Patrick Cryne Building
- Clinical Science Buildings (CSB)2
- Clinical Science Buildings (CSB)3
- Peter Mount Building

Description of Development

The proposal seeks the installation of PV panels across the roof areas of four building within the Manchester Royal Infirmary site.

The proposal also includes man-safe systems and additional access ladders to facilitate safe roof access for future inspection and maintenance activities.

Consultations & Notification Responses

Publicity - Neighbour notification letters were sent to surrounding properties. A site notice and local press advert were also produced. At the time of writing this report, no representations have been received because of this publicity.

Helipad Manager - Following a review of the submitted Glint and Glare Assessment, they raised no objection as long as the scheme was amended to implement the mitigation measures proposed in the report for saw tooth mitigation for the Patrick Cryne building to future proof against any potential changes or deviations in current or future approach paths.

Manchester Airport Safeguarding Officer - Requested that an informative be attached to any approved decision regarding cranes and tall equipment. This has been attached to the decision.

Draft National Planning Policy Framework (NPPF) (2025)

The government has published a consultation National Planning Policy Framework which is intended to improve housebuilding rates through a clearer, more predictable and faster policy basis for decision and plan making.

Whilst this is a draft NPPF for consultation it is considered that the development proposals are in accordance with the general thrust of policy contained within it. As set out in the printed report no adverse impacts have been identified through consideration of the application proposals that would outweigh a positive decision in this instance.

Issues

Principle of Development

The Manchester University NHS Foundation Trust (MFT) is initiating a strategic sustainability project to install Photo-Voltaic (PV) cells across designated roof spaces at its Oxford Road Campus. The primary objective is to generate a minimum of 574 (mWh) of sustainable electricity annually, contributing to the Trust's environmental goals and energy efficiency targets.

Installation of PV panels is proposed across several roof areas within the Manchester Royal Infirmary (MRI) site on the following building:

- Patrick Cryne Building
- Clinical Science Buildings (CSB)2
- Clinical Science Buildings (CSB)3
- Peter Mount Building

The proposal also includes man-safe systems and additional access ladders to facilitate safe roof access for future inspection and maintenance activities.

Given that the proposal seeks to contribute to the Trust's environmental goals and energy efficiency targets, as well as facilitate safe roof access for future inspection and maintenance

activities, the principle of the development is accepted, subject to the proposal according with the below material planning considerations.

Visual Amenity

In terms of the visual amenity, for the Patrick Cryne Building has a flat roof with 1.2m parapet, highest equipment 307mm.

A roof-mounted ballast-type solar will be installed, with panels angled and the highest equipment 307 mm above the roof. The PV equipment will not be visible from any surrounding street elevations.

Currently, there is a ladder over the parapet to the south first-floor roof. The proposal seeks to install an additional ladder connecting the first-floor roof to the ground floor, which will ensure that there are sufficient escape routes have maximum travel distances under 100 m, meeting Approved Document Part B requirements.

Proposed Elevation B

As there is already a ladder in place on this elevation, the introduction of an additional ladder is not considered to cause significant harm to visual amenity. The elevation faces on to the central area of the MRI, which features many building with guardrails around the top and ladder access, therefore, it will not appear incongruous within its immediate surroundings.

Existing Patrick Cryne elevation

CSB2 has a roof that slopes downward to the west at approximately 4 degrees. The proposal uses a low-profile, single-rail roof-fixing PV mounting system with a raised height of around 165 mm. All equipment is set back a minimum of 1 m from the roof edges, resulting in low visibility from the west and south elevations only.

Existing CSB2 elevation

CSB3 has a roof that slopes downward to the east at approximately 4 degrees. The proposal incorporates a low-profile, single-rail roof-fixing PV mounting system with a raised height of around 165 mm. All equipment is set back at least 1 m from the roof edges, resulting in low visibility from the east elevation and being fully hidden from all other viewpoints.

Existing CSB3 elevation

There is currently no permanent roof access to CSB3. The proposal introduces a new ladder from the fourth-floor balcony, which connects to an existing double door providing access from the internal fourth-floor area. The escape routes have maximum travel distances of under 60 m, meeting the single-direction travel distance requirements for open plant areas set out in Approved Document Part B. This ladder will only attend from the roof to the fourth-floor balcony, will be set back from the parapet and not be easily visible from the surrounding street scene.

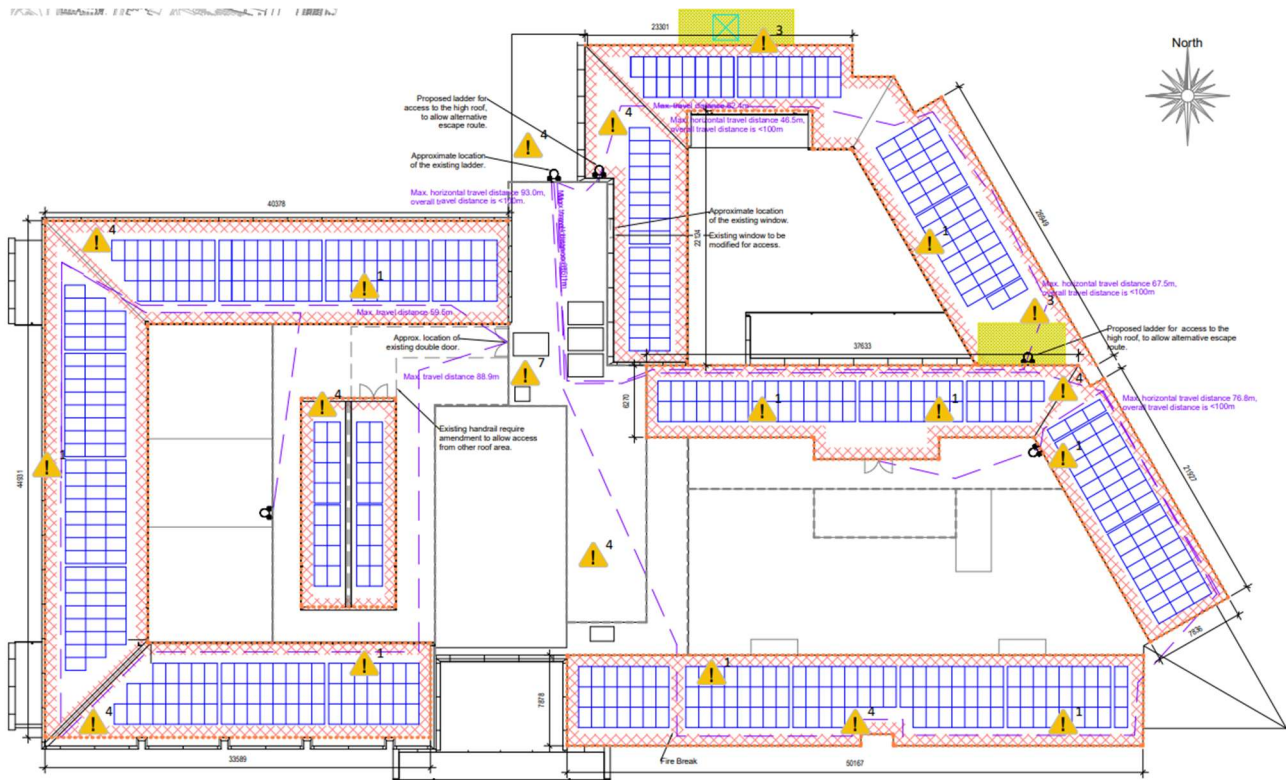

Peter Mount Building has three roof zones that slope downward toward the courtyard at approximately 4 degrees. The proposal incorporates a low-profile, single-rail roof-fixing PV mounting system with a raised height of around 165 mm. All equipment is set back at least 1'm from the roof edges, resulting in low visibility from courtyard elevations and most of them being fully hidden from street elevations.

Existing Hathersage Road elevation (Peter Mount Building)

Existing North Road elevation (Peter Mount Building)

Proposed Peter Mount roof layout

There shall be 4no. ladders introduced on to the Peter Mount building.

On the west facing roof, a new looped ladder is proposed to provide alternative access to the lower roof, which connects to the first-floor internal area, this will face internally, be set far back and not be visible from the surrounding street scene.

On the north facing roof, there is currently no permanent roof access, and the proposal is to introduce two new ladders to connect to the higher roof level, providing compliant access and alternative escape routes. These will be far set back from east road.

On the east facing roof, an additional looped ladder is proposed to provide access to the lower balcony area, which connects to the first-floor internal area. This will be set back, obscured by the parapet of the lower roof and not readily visible from most surrounding viewpoints on north road, although it will be visible from some.

Even in positions where the ladders can be seen, there are already ladders on the building and given the nature of the surrounding buildings on the MRI estate, many of which feature guardrails and ladder access, the introduction of further ladders is not considered to have a significant enough impact upon visual amenity in order to warrant a refusal.

Impact on Heritage

Whilst there are many listed buildings within the estate, given the locations of the PV panels and ladders, the only building considered to be in the setting of these works is the Grade II listed St Marys Hospital.

The back elevation of CSB3 faces onto this building, where an additional ladder will be installed between the roof and fourth-floor balcony.

As this will be set back from the parapet and not readily visibly, it is considered to have no harm to the significance or the setting of this listed building.

Glint and Glare

The NHS helipad is located on the roof of the multi-storey car park on Grafton Street. Of the buildings included within this proposal, the Patrick Cryne Building is the closest, positioned approximately 170 m to the south of the helipad, with CSB2 and CSB3 situated further to the south-west. The Peter Mount Building is the furthest from the helipad.

A Glint and Glare Assessment was provided during the course of the application. The Helipad Manager raised no objection as long as the scheme was amended to implement the mitigation measures proposed in the report for saw tooth mitigation for the Patrick Cryne building to future proof against any potential changes or deviations in current or future approach paths.

The applicant amended the layout of the PV panels on the Patrick Cryne building accordingly, therefore alleviating any potential concerns concerning Glint and Glare.

Fire Safety

On Patrick Cryne Building, a firebreak is proposed on the east roof, where PV block lengths exceed 45 m.

On CSB2, a central firebreak is proposed to provide separation between PV blocks where lengths exceed 45 m.

On Peter Mount Building's south roof, a central firebreak is proposed to provide adequate separation between PV blocks where lengths exceed 45 m.

Overall, there are no concerns with fire safety regarding the proposals.

Public Safety and Access

All roofs are designed to have a 1 m clear access path around the PV panel zone, serving as a maintenance safe zone. The area is unobstructed, structurally safe, and suitable for personnel access.

The proposals overall will provide escape routes that have maximum travel distances under 100 m, meeting Approved Document Part B requirements. It is considered that it will improve access to the roofs and improve the safety of those accessing the roofs to carry out works.

Bird Mitigation

The proposal will provide continuous bird exclusion mesh around PV array perimeter, fabricated from UV-stable stainless steel, 25 mm aperture, fixed to PV module frame with non-penetrative clips.

Conclusion

Given the above, the proposal is considered to be consistent with the relevant policies set out above and is therefore approved with conditions attached.

Other Legislative Requirements

She believes that any restriction on these rights posed by the recommendation given is proportionate to the wider benefits of and that such a decision falls within the margin of discretion afforded to the Council under the Town and Country Planning Acts.

Recommendation: Approve

Article 35 Declaration

Officers have worked with the applicant/agent in a positive and proactive manner based on seeking solutions to problems arising in relation to dealing with the application. In this instance, as there were concerns raised from the Glint and Glare Assessment, this has resulted in an amendment to the PV panel layout in one area, following relevant mitigation measures. This has necessitated an Extension of Time to be agreed in order to resolve this issue.
