Hi Rob,

I am still chasing the coverage plots.

In terms of the pacemaker issue, can we refer you to the below Position Statement:

Cardiac pacemakers and other implanted devices

There is no evidence to suggest that radio frequency fields from radio base stations can interfere with cardiac pacemakers or other implanted medical devices so long as the exposure levels from the radio base station are within the International Commission on Non-Ionizing Radiation Protection (ICNIRP) guidelines.

There is some potential for a mobile phone or device to interfere with a pacemaker. The British Heart Foundation recommends

"When you use your phone, always use the ear on the opposite side to your implanted device and don't put the phone in a chest pocket that is on the same side as your pacemaker".

For further information, contact the Medicines and Healthcare Products Regulatory Agency on 0203 080 6000 or access the website at www.mhra.gov.uk.

Hi Dianne,

Whilst awaiting the coverage plots from you, I have received a number of objections to this proposal in respect of potential impacts of this type installation and radiofrequency electromagnetic fields on people with medical implants. In particular concerns that the ICNIRP certification process does not adequately deal with these potential impacts. I note this application is support by a number of statements around health but I couldn't readily see any consideration of this particular matter within the documentation. I am emailing you to see if there is a particular response that you would wish to make to the concerns that have been raised with us given the siting of this proposal in close proximity to three storey residential properties and a busy well used bus stop facility.

I look forward to hearing from you.

To: Robert Ginnitt <robert.ginnitt@manchestercity.gov.uk>
