1.0 Refuse Storage & Disposal Strategy

The new brick workshop is replacing an existing facility, so in essence the strategy for the disposal and storage of refuse remains as existing. The campus currently has a single external refuse store located to the Northwest of the site adjacent to the existing substation. The College collect refuse and recycling and move the bins to this area at the end of each day, and it is picked up by refuse and recycling trucks which drive through the site from Hollyhedge Road and exit on Walney Road.

The College are proposing to create a new external bin store location for the Southern half of the linear campus to reduce the distance that the cleaners need to transport the waste. A new enclosure with hit and miss timber fencing will be formed adjacent to Block A to accommodate refuse and recycling from the brick workshop, the bungalow, and Blocks A and B. This will be sized to accommodate 2 no. 1100 litre euro bins. The proposed location has been chosen to suit the existing route of the refuse and recycling vehicles.
