Specification – Panelled Timber Entrance Door

The new entrance door will be a solid timber panelled door designed to be sympathetic to the character of the former Victorian warehouse building within the George Street Conservation Area.
The door will feature a simple recessed panel design without glazing or domestic-style decorative detailing. It will be constructed from external-grade hardwood and finished in a dark, recessive colour (such as dark grey or black) to complement the existing façade.
The door will be fitted with heavy-duty hinges and a high-security multipoint locking system suitable for commercial use.
