Compliance Statement

To whom it may concern ,

We can confirm the design and installation of the 3G pitch at Dixons Academy; Newall Green Wythenshawe meets football foundation guidance.
It meets the guidance for lines for inlaid full size 11v11 and painted 9v9 formats.

It is designed with microplastic retention measures in the form of De contamination grills and perimeter kickboards to stop the migration of rubber crumb from the pitch surface to the surrounding areas.

The timescales for the construction of the 3G pitch is approximately 14 weeks.

A schedule of pitch maintenance accompanies this statement and should be implemented for a minimum of five years, recommended for the lifespan of the surface.
