Executive Summary

This report presents a ground contamination desk study and preliminary risk assessment for proposed residential development at 1 Lord Street, Manchester.

The report has been prepared in accordance with national guidance. It includes a review of historical site uses, environmental setting and ground conditions, using desk-based resources and a 2019 ground investigation.

The site has undergone at least two stages of historical development and demolition, including residential, commercial and retail uses. A lighting factory was present in the east of the site between 1980s and 2010. All buildings were demolished in 2019. An active petrol filling station was adjacent to the south of site.

Previous ground investigation was undertaken in 2019 before demolition. Ground conditions comprised Made Ground, up to 2.5m thick, over cohesive Glacial Till, with layers of sand from 4.5m bgl. The Chester Bed Formation (principal aquifer) was encountered from depths in the range of 14.7m to 20.9m bgl, comprising an upper weathered zone and rockhead from 24.1m bgl. Groundwater level was identified from approximately 13.2m bgl in the aquifer.

No visual or olfactory evidence of contamination was identified during the ground investigation. No significant sources of ground gases were observed. The potential for significant ground contamination to be present on-site is low, as demonstrated by the 2019 ground investigation.

The conceptual site model and preliminary risk assessment conclude that the risks from ground contamination at the site ranges from low, to moderate to low.

It is recommended that a limited phase of ground investigation is undertaken to confirm the latest condition of the site, including areas that were inaccessible during the 2019 investigation. It is expected that this could be undertaken following granting of planning permission.

1.0 Introduction

1.1 Background

- 1.1.1 Enzygo Geoenvironmental Limited has been commissioned by Linear Group to prepare a ground contamination preliminary risk assessment report in support of the planning application for a site at 1 Lord Street, Manchester, M4 4EW (the site). The proposed development is for a residential apartment building with single basement level.

1.2 Objectives

- 1.2.1 The objectives of this report are to:
- Identify and assess relevant information sources concerning historical site uses, environmental setting, site sensitivity, ground conditions and the potential for ground contamination to be present at the site and in the surrounding area.
 - Undertake a preliminary risk assessment based on a conceptual site model, considering potential risks to sensitive environmental and human health receptors associated with the construction and operational stages of the proposed development.
 - Identify the need for further assessment, such as ground investigation, where potential unacceptable risks are identified.
- 1.2.2 The report has been prepared in general accordance with the National Planning Policy Framework¹, BS10175:2011+A2:2017 Investigation of potentially contaminants sites², and Land Contamination Risk Management (LCRM) guidance³.
- 1.2.3 The report does not present a survey or assessment of the location, condition, or liabilities associated with hazardous materials in the building fabric, such as asbestos or lead.

1.3 Information Sources

- 1.3.1 The following information sources have been used in the preparation of this report:
- Envirocheck Report⁴ including environmental database report and historical mapping (included in Appendix 1).
 - Environmental site walkover survey undertaken by Enzygo on 6 October 2025.
 - British Geological Survey (BGS) GeoIndex website⁵.
 - Manchester City Council planning search website⁶.
 - Zetica UXO risk maps website⁷.
 - Previous ground investigation and contamination assessment for the site⁸.

2.0 Site Setting

2.1 Site Location

- 2.1.1 The site is at 1 Lord Street, Manchester, M4 4EW. The centre of the site is located at National Grid Reference SJ 84139 99434. The site is bounded by Cheetham Hill Road to the west, Lord Street to the north, and Fernie Street to the east. The site is approximately 300m north of Manchester Victoria station.
- 2.1.2 The site is approximately 0.17 hectares and comprises a rectangular shaped plot of land, approximately 50m (north to south) by 32m (east to west). The existing site plan including the planning application boundary is included as Drawing 1.
- 2.1.3 The local topography slopes down to the south and east, from Cheetham Hill Road in the west to the River Irk, approximately 195m to the south at its nearest reach. The topographic elevation is approximately 45.4m above Ordnance Datum (AOD) in the west at Cheetham Hill Road, to 40.9mAOD in the southeast of the site at Fernie Street.

2.2 Surrounding Area

- 2.2.1 Land uses surrounding the site are summarised as follows:

Table 1 Land Use Surrounding the Area

Direction	Land Use
North	Commercial / retail outlet building beyond Lord Street
West	Commercial / retail outlet building beyond Cheetham Hill Road
South	Petrol Filling Station (Texaco) car parking and forecourt
East	Residential apartment block beyond Fernie Street

2.3 Site Walkover

- 2.3.1 A site walkover was undertaken on 6 October 2025 by a consultant from Enzygo. The findings of the site walkover are discussed below. Photos of the site are included in Appendix 2.
- 2.3.2 The site was vacant following demolition of the former structures in 2019. The site was secured by perimeter hoarding, with vehicle access gates along the eastern boundary on Fernie Street.
- 2.3.3 A gradual slope, from east to west, was observed across the site. A raised bank, approximately 2m high, was present in the west of the site. The top of the bank was approximately level with Cheetham Hill Road to the west.
- 2.3.4 The site was surfaced with unbound gravel and concrete aggregate, with grass and shrub vegetation growth which was dense close to the site boundaries, including buddleia and small immature trees. Scattered debris, including timber and occasional litter were observed at surface. A drainage access chamber cover was present in the centre of the site.
- 2.3.5 An area of retained concrete slab was present in the south of the site. A small structure, part of the former buildings demolished in 2019, had been retained in the south west of the site. Metal barriers, and drums supporting the site hoarding, were present on the flat concrete 'roof' which was close to ground level with adjoining offsite areas. The area was overgrown with vegetation, with various debris, including timber, metal and two empty propane gas canisters.

- 2.3.6 A Texaco petrol filling station was offsite to the south of the site. A large bunded diesel tank was located adjacent to the southwestern boundary. The ground level of the filling station was approximately 2m above the site level.

2.4 Proposed Development

- 2.4.1 The proposed scheme comprises a high-rise residential development. Residential uses are from ground floor level and above. The ground floor is above a single basement level.
- 2.4.2 The proposed floor level of the basement is at 40.9mAOD. The basement level is approximately 4.5m below ground level in the west adjacent to Cheetham Hill Road, and close to street level in the southeastern corner on Fernie Street. The basement uses are to comprise cycle parking, refuse stores, plant rooms, lifts and stairwell.
- 2.4.3 External hard landscaping, including stepped walkway and planters are proposed in the south of the site between the development and the adjacent filling station. Planters and hard paving are proposed adjacent to Lord Street (in the north) and Fernie Street (in the east).

3.0 Site History and Industrial Land Uses

3.1 Historical Maps

3.1.1 A review of historical Ordnance Survey maps and other pertinent records contained in the Envirocheck⁴ is summarised in Table 2. Features within a 250m radius of the site boundary are described. Features further than 250m have only been included where useful to provide context and will not significantly impact the site.

Table 2 Summary of Historical Mapping

Map Edition	Historical Land Use	
	On-Site	Off-Site
1848 (1:10,560) 1850 (1:1,056 Lancashire & Furness)	The site comprises open land adjacent to the east of Cheetham Hill Road.	Dense terraced housing is under construction in the general area. A large brickfield (Strangeways Park) is from 50m west of site. A tannery is from 60m to the southeast. A printworks is from 100m south.
1891 (1:500) 1892 (1:2,500)	The site has been entirely development with terraced properties fronting Cheetham Hill Road (to the west), likely commercial / retail, and Fernie Street (to the east) likely residential with small rear yards.	The surrounding area has been densely developed, predominantly with residential terraces and small industry. A timber yard is from 50m north east, the 'Red Bank Spring and Axel Works' is from 60m south east (formerly the tannery), a carriage works, and hospital is 100m to the southwest. A large area of heavy industry is located from approximately 170m east of the site beyond rail lines, including tannery, oil works, print and dye works and chemical works.
1908 (1:2,500)	No significant changes noted.	The area of heavy industry 170m east of the site has been redeveloped as Union Bridge Iron Works.
1938 (1:10,560)	The buildings in the eastern half of the site adjacent to Fernie Street (residential terrace) have been demolished.	Four blocks of residential terraces immediate to the east of the site have been removed. The Spring and Axel works has been extended and is from 10m southeast of site.
1949 (1:1,250)	The buildings in the west of the site are labelled 78 to 96 Cheetham Hill Road, including the Pleasant Inn public house. The east of the site remains vacant.	The Albert Oil Works is from 60m northeast of site (formerly timber yard). Buildings labelled as ruins (from aerial bombing during World War II) are labelled 30m northwest and from 120m west of site. Several clothing factories are present beyond 60m south of site.
1951 (1:1,250)	A school has been built in the northeast of site. Two of the buildings in the west have been demolished.	A circular tank is labelled on previously vacant land approximately 20m east of site (by 1952).
1963 (1:1,250)	The former public house in the west of site has been demolished.	The tank to the east of the site is no longer shown. The former oil works (60m northeast) has been relabelled as works. An electrical substation is 60m south of site.

Map Edition	Historical Land Use	
	On-Site	Off-Site
1984 (1:1,250)	The former school building is labelled as a factory. In the west only two of the original buildings (in the north west corner of the site) remain. The remainder of the site appears to be vacant.	A garage is located immediately to the south of the site. (The configuration of the forecourt is like the existing petrol filling station). A further garage is from 30m southwest. Buildings to the north and west have been redeveloped as warehouses and depots. The former iron works (170m east) has been demolished (labelled as a car park by 1990).
1992 (1:1,250) 1995 (1:1,250)	A terrace of seven buildings has been constructed in the west of site. The factory remains in the northeast.	The former Spring and Axel work, from 10m southeast of the site, has been demolished by 1995.
2006 (1:10,000)	The two original buildings in the northwest corner of the site are no longer shown.	Development of residential apartment buildings has occurred from approximately 60m east of the site.
2016 (1:10,000)	No significant changes noted.	Apartment buildings adjacent to the east of Fernie Road have been developed.
2025 (1:10,000)	The site is shown to be vacant. (Demolition occurred onsite in 2019)	The former garage from 30m southwest is shown as disused.

3.1.2 In summary, the site has undergone at least two stages of development and demolition:

1. The site was initially developed by 1891 with dense terraced properties likely of commercial / retail use in the west and residential with small rear yards in the east.

Demolition: The residential terrace (in the east) was demolished by 1938. Buildings in the west were demolished individually between the 1950s and 1970s.

2. A school was constructed in the east of the site by 1951. The school building was later used as a factory (possibly a lighting manufacturer) by 1984. In the west of site, a terrace of buildings (likely commercial / retail) fronting Cheetham Hill Road was constructed by 1992.

Demolition: All buildings were demolished in 2019.

3.2 Industrial Land Uses

3.2.1 One active fuel station entry (Redbank Service Station) was located from 30m to the south of the site operated by Texaco (as observed during the site walkover). One further entry (Cheetham Hill Service Station) listed as obsolete was located approximately 35m west.

3.2.2 93 contemporary trade directory entries were listed within 250m of the site. The closest entry was inactive and located onsite, comprising a lighting manufacturer. The closest active entry was located 30m south of the site comprising the Texaco petrol filling station. Other nearby active trades included printers (from 40m northwest), clothing manufacturers (70m west), cleaning services (90m northwest) and distribution and haulage services (100m northeast).

3.3 Permits

3.3.1 Redbank Service Station (30m south of site) is subject to Local Authority Pollution Prevention and Control as a petrol filling station, permit reference PPC/PFS/RM/029/06. The permit for Cheetham Hill Service Station (35m west of site) has been revoked.

- 3.3.2 Eight discharge consents are located within 250m of the site, all of which are operated by United Utilities Water Limited for discharge of storm sewage overflow. The closest is 86m to the northeast of the site, the receiving water is listed as surface / underground water. Discharge to the River Irk is listed 193m south of site.

3.4 Pollution Incidents

- 3.4.1 One pollution incident to controlled waters was within 250m of site, located 160m to the southwest in the catchment of the River Irwell. The pollutant was described as unknown oils accidentally spilled in 1995, causing a category 3 minor incident.
- 3.4.2 One substantiated pollution incident was located 250m to the east of the site classified as a Category 2 significant impact to land. The pollutant was listed as asbestos waste; the incident was dated 2012.

3.5 Waste and Landfill

- 3.5.1 No active, recent or historical landfill sites are located within 250m of the site.
- 3.5.2 Two licensed waste management facilities were located within 250m of the site. The closest was located approximately 140m east of the site listed under the category of mobile plant between 2002 and 2007. The second was recorded approximately 240m east of the site listed as a waste transfer station.
- 3.5.3 An area of potentially infilled land was recorded approximately 160m west of the site. It was recorded as unknown filled ground associated with former pit or quarry. This appears to be associated with the former brickfield referred to as Strangeways Park in historical mapping (before 1890s).
- 3.5.4 Six areas of potentially infilled land associated with surface waters were located within 250m of the site, all of which are recorded between 110m and 155m to the northwest or north of the site. These have been inferred from the 1848 map extract during a period of rapid development in the area (before 1890s).

3.6 Local Planning Authority

- 3.6.1 A search of the Manchester City Council planning portal has been undertaken. A previous application has been approved for the site (142602/LE/2025) for the demolition of all buildings on site and installation and connection of main drainage. Photos on completion of the demolition in October 2019 are reproduced in Figure 1.

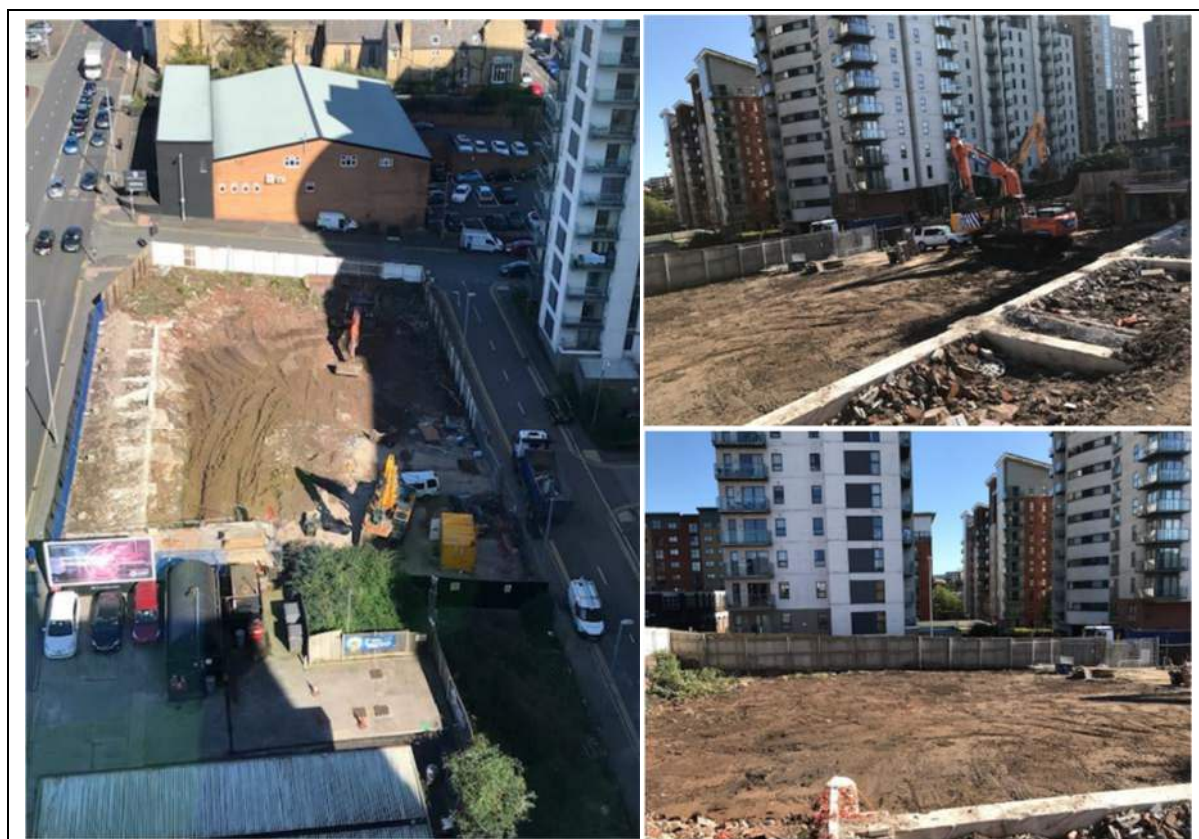

Figure 1 Photos after the demolition of former structures in October 2019

3.6.2 No significant activities are understood to have occurred on the site since completion of the demolition and drainage connection works. The site surface comprises crushed concrete aggregate as observed during the site walkover in October 2025.

3.7 Unexploded Ordnance

3.7.1 The site is in an area which is defined by Zetica as having a moderate bomb risk.

3.7.2 Based on a review of historical maps the site was shown to have been occupied by building in the western half and vacant in the east (1938 extract (1:10,560)) prior to World War II. The configuration of the building onsite post war (1949 extract (1:1,250)) appeared unchanged. The closest ruined buildings from aerial bombing were shown from approximately 30m to the northwest. Indicating the bombs impacted close to the site.

3.7.3 The whole site has been subject to development following World War II thereby reducing the risk of any UXO remaining on site.

3.7.4 It is recommended that a preliminary UXO risk assessment is undertaken for the site if not already completed.

4.0 Environmental Setting

4.1 Ground Conditions

- 4.1.1 The British Geological Survey (BGS)⁵ data indicates that the site is underlain by the geological sequence listed in Table 3.

Table 3 Geological Sequence

Geological Unit	Type	Descriptions	Aquifer Classification
Superficial	Glacial Till / Glaciofluvial Deposits	Clay / Sand	Secondary Undifferentiated
Bedrock	Chester Bed Formation	Sandstone	Principal

- 4.1.2 No BGS boreholes are available within 250m of the site. No artificial or Made Ground is recorded by BGS onsite.

4.2 Hydrogeology

- 4.2.1 The site is underlain by Glacial Till (clay) and possibly Glaciofluvial Deposits (sand) designated a superficial secondary undifferentiated aquifer.
- 4.2.2 The underlying bedrock aquifer is designated as a principal aquifer. Principal aquifers usually provide a high level of water storage and may support water supply and/or river base flow on a strategic scale.
- 4.2.3 The combined groundwater vulnerability at the site is low.
- 4.2.4 The site is not within a groundwater Source Protection Zone, nor are any located within the vicinity of the site.
- 4.2.5 One groundwater abstraction is within 250m of site, located 230m west of site at Derby Brewery. The abstraction is from a single borehole for use as process water.

4.3 Hydrology

- 4.3.1 The nearest surface water feature is the River Irk which is 195m south of the site at its nearest reach. The river flow is to the southwest, joining the River Irwell approximately 550m south. Groundwater flow is anticipated towards the south.

4.4 Radon Potential

- 4.4.1 The site is not in a radon affected area. Less than 1% of homes are estimated to be at or above the action level (200Bq/m³). The published guidance for England indicates that no radon protection measures are necessary in the construction of new dwellings or extensions for this classification.

4.5 Mining Hazards

- 4.5.1 The site is not within an area that has been affected by any past recorded underground coal mining.
- 4.5.2 No significant risk from non-coal mining workings is identified. No non-coal mining cavities were identified within 1000m of the site.

4.6 Natural Hazards

- 4.6.1 BGS information on geotechnical and ground stability hazards are included in the Envirocheck report. The hazard rating for the site is summarised in Table 4.

Table 4 Natural Hazards

Hazard	Hazard rating (Envirocheck)
Collapsible Ground	Very Low
Compressible Ground	Very low
Ground Dissolution	Negligible
Landslide	Very Low
Running Sand	Very Low
Swelling / Shrinking Clay	Very Low

4.7 Sensitive Land Uses

- 4.7.1 There are no sensitive environmental designations, such as sites of special scientific interest (SSSI), local nature reserves or ancient woodland within 250m of the site.

5.0 Previous Ground Investigation

5.1 On-Site Investigation and Assessment

5.1.1 A ground investigation was completed by Enzygo in March and April 2019, before demolition, on behalf of Beaumont Morgan Developments Ltd.

5.1.2 The ground investigation comprised the following scope:

- Three cable percussion with rotary follow-on boreholes (BH01 to BH03) to depths in the range of 25.0m to 31.2m bgl.
- Three dynamic windowless samples boreholes (WS01, WS04 and WS06) to depths in the range of 0.6 to 8.45m bgl. WS04 was terminated at 0.6m bgl due to an obstruction. Proposed locations WS02, WS03 and WS05 could not be completed due to access restrictions onsite at the time.
- Laboratory analysis of five soil samples for contamination analysis.
- Six monitoring visits to measure groundwater levels and ground gas concentration in two standpipes (BH01 and WS01).

5.1.3 Soil samples were analysed for a suite of heavy metals, cyanide, phenol, polycyclic aromatic hydrocarbons (PAH), total petroleum hydrocarbons (TPH), asbestos and total organic matter.

5.1.4 The indicative exploratory hole locations are shown in Figure 2.

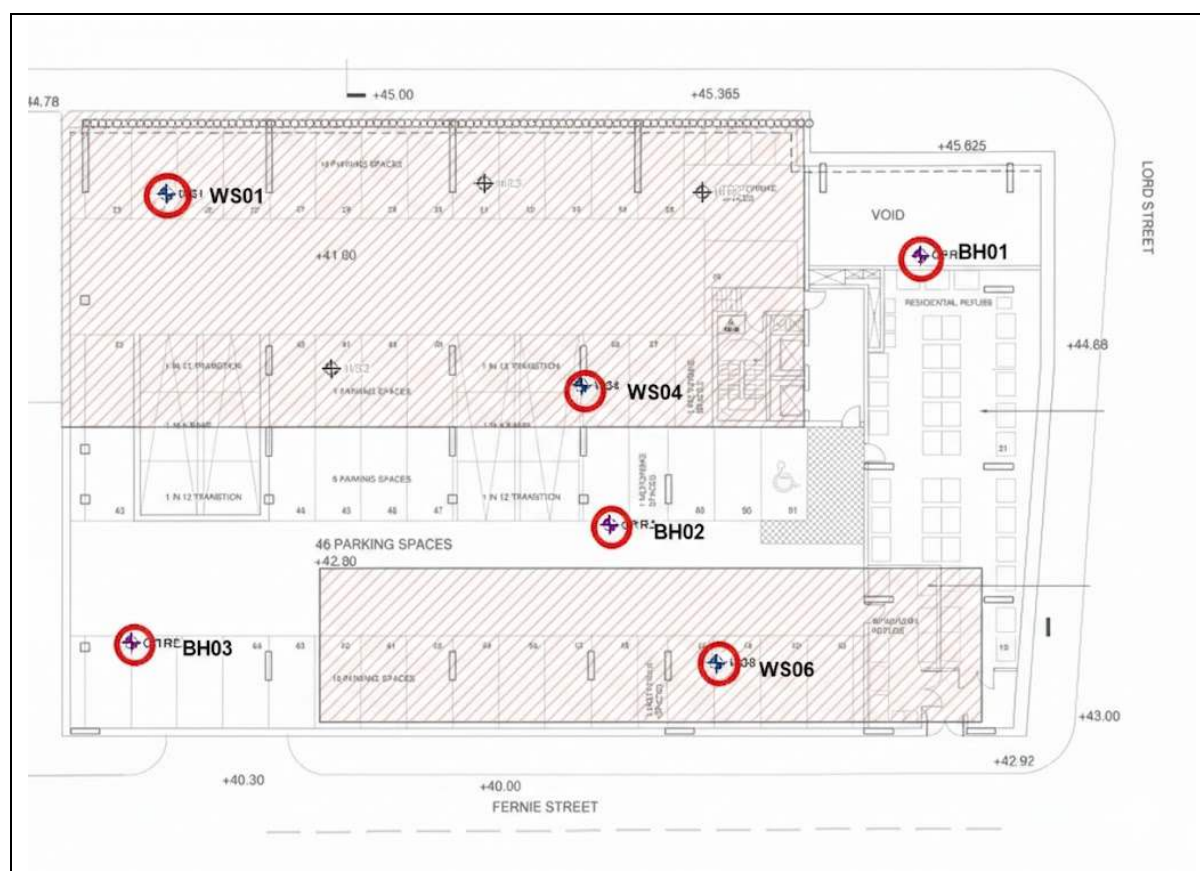

Figure 2 Previous Exploratory Hole Location Plan (Enzygo, 2019)

5.2 Ground Conditions

Table 5 Ground Conditions Established by Previous Ground Investigation (Enzygo, 2019)

Stratum	Description	Depth to the top of strata (m bgl)	Thickness (m)
Made Ground	Concrete	0	0.2
	Tarmac	0	0.15
	Dark brown to reddish-brown clayey sand, with inclusions of brick and ash.	0 – 0.2	0.1 – 2.5
	Firm to stiff brown clay, with occasional brick, concrete and sandstone fragments	0.75 – 1.3	0.6 – 1.95
Glacial Till	Firm to stiff brown slightly sandy gravelly clay. Gravel of angular to sub-rounded fine to coarse quartz and sandstone. Horizons of medium dense to dense silt and sand encountered from depths of 4.5m and 5.9mbgl, up to 7.9m thick.	1.9 – 2.7	14.6 – 18.2
Weathered Chester Bed Formation	Very dense reddish-brown cobbles of sandstone and quartzite OR Gravelly coarse sand. Gravel of angular sandstone and quartz.	14.7 – 20.9	>4.1 – 9.4
Chester Bed Formation	Reddish-brown moderately strong sandstone	24.1 (BH01)	>7.1 (BH01)

- 5.2.1 Made Ground was encountered in all exploratory holes and typically comprised reddish-brown to dark brown clayey sand with inclusions of brick and ash to a depth of up to 2.5m in WS06. Firm to stiff clay was encountered in BH01, BH02 and BH03 to depth of between 1.9m and 2.7m bgl, possibly comprising reworked natural soils.
- 5.2.2 Made Ground was underlain by Glacial Till comprising firm to very stiff slightly sandy gravelly clay. Layers of medium dense to very dense sand were encountered from depths of between 4.5m and 5.9m bgl and up to 7.9m thick (possibly Glaciofluvial Deposits within the Glacial Till).
- 5.2.3 Weathered Chester Bed Formation, comprising either dense to very dense sandstone and quartz cobbles, or dense to very dense gravelly sand up to 9.4m thick, was encountered above competent rockhead.
- 5.2.4 Moderately strong reddish-brown medium grained sandstone was encountered below the weathered zone from 24.1m bgl in BH01. Competent rockhead was not encountered in BH02 or BH03 at completion depth of 25m bgl. The sandstone was not fully penetrated at the completion depth of BH01 at 31.2m bgl.

5.3 Groundwater

- 5.3.1 During drilling groundwater seepages were encountered in WS01 at 4.5 and 6.2m bgl associated with bands of clayey sand (between 0.2m and 0.8m thick) in the Glacial Till. In BH01 groundwater was encountered at a depth of 20.8m bgl in the weathered Chester Bed Formation.
- 5.3.2 A summary of the standpipe installation details, the monitoring rounds completed, and groundwater levels is presented in Table 6.

Table 6 Standpipe response zones and groundwater level monitoring

BH	Standpipe response zone		Monitoring rounds	Groundwater level (m bgl)
	Depth (m bgl)	Strata		
BH01	1.0 – 19.0	Glacial Till (sandy clay and clayey sandy silt, with silty sand (between 5.4 and 11.9m)) Weathered Chester Bed Formation (gravelly sand and sandy gravel from 14.7m)	6	13.16 – 13.28
WS01	1.0 – 5.0	Made Ground to 1.1m Glacial Till (slightly gravelly silty clay, becoming clayey sand from 4.5m)	6	3.01 – 3.26

5.3.3 The groundwater level in WS01 from 3.01m depth, recorded in the Glacial Till is interpreted to be a discontinuous groundwater associated with granular bands in the predominantly cohesive deposits.

5.3.4 The groundwater level in the weathered Chester Bed Formation principal aquifer was recorded at a level of between 13.16 and 13.28m bgl in BH01.

5.4 Evidence of Contamination

5.4.1 No visual or olfactory evidence of contamination was encountered during the ground investigation.

5.5 Ground Gases

5.5.1 Ground gas monitoring was undertaken from standpipes (Table 6) on six occasions between 25 April and 10 June 2019. Concentrations of hazardous ground gases were consistently very low. The maximum recorded concentration of methane was 0.1%v/v and carbon dioxide was 3.3%v/v. Negligible gas flows were recorded consistently <0.1l/hr. No volatiles were detected.

5.6 Chemical Testing of Soil

5.6.1 Four soil samples from the Made Ground, at depths between 0.5m and 1.05m, and one sample of the shallow Glacial Till were submitted for contamination analysis. The results identified very low concentrations of contaminants in soil, which were typically well below the generic assessment criteria (GAC) considering chronic risk to human health of future residential end users.

5.6.2 A sample of Made Ground from WS04 at a depth of 0.5m, contained lead of 553mg/kg which was marginally above the residential GAC. The soil was observed to contain ash and slag which are potential sources.

5.6.3 No asbestos was detected in the five samples analysed.

6.0 Preliminary Risk Assessment

6.1 Risk Classification Methodology

- 6.1.1 The method of contamination risk evaluation to human health and environmental receptors has been undertaken in accordance with national guidance⁹, considering the available construction and operational details of the proposed development.
- 6.1.2 The risk evaluation considers the magnitude of the potential severity of the hazard and the probability of occurrence. The risk characterisation has been assessed based on the qualitative method of interpretation set out in CIRIA C552⁹ and NHBC risk classification methodology¹⁰. Further details are provided in Appendix 3.

6.2 Potential Sources

- 6.2.1 Potential onsite and offsite sources of contamination have been identified as described in Table 7.

Table 7 Potential Sources of Contamination

Ref	Source	Potential contaminants of concern	Comments
On-site			
S1	Made Ground, imported fill or materials generated during construction and demolition of previous structures	Metals and metalloids, hydrocarbons (PAH and TPH), asbestos and ACM Ground gases	The site has undergone at least two stages of historical development and demolition. Previous uses included retail and a lighting manufacturer (1980s to 2010s). Previous ground investigation (2019) undertaken before recent demolition identified Made Ground up to 2.7m thick, containing varying proportions of anthropogenic inclusions, such as brick, concrete, ash and slag. Levels of contamination were low. Ground gas monitoring indicated no elevated hazardous gases or positive gas flows.
Off-site			
S2	Petrol filling station (PFS), associated fuel storage and dispensing	Fuels (petrol and diesel), oils Vapours	The PFS is adjacent to the south and approximately 2m above site level. Shallow geology comprises cohesive Glacial Till of low permeability which will limit migration of contamination. Local groundwater flow direction is inferred to the south away from site. Previous ground investigation did not identify any associated contamination in soil, or during monitoring (gas and groundwater levels) of standpipes installed in the Glacial Till and granular Chester Bed Formation.
S3	Historical industrial land uses	Metals and metalloids, hydrocarbons (PAH and TPH) Ground gases	Nearby historical industrial site includes engineering works from 10m southeast of the site until the 1990s and oil works 60m northeast of the site before 1980s. Limited to mobile contamination in groundwater or ground gases. Previous ground investigation did not identify any associated contamination.

⁹ CIRIA DETR, C552: Contaminated land risk assessment, a guide to good practice, 2001

¹⁰ EA, NHBC, DETR, Guidance for the safe development of housing on land affected by contamination, R&D66, 2008

6.2.2 The following potential sources of contamination have been discounted from further assessment:

- Large brick works and potentially infilled ground from 50m to the west of the site before 1890s. Discounted due to age and extensive dense urban redevelopment of the area which has occurred across the area.

6.3 Potential Receptors

6.3.1 The following potential receptors have been identified associated with the proposed development at the site:

- R1 – Construction workers and site visitors.
- R2 – Site neighbours during construction.
- R3 – Site users during operations, mainly residents of the apartment block and service employees.
- R4 – Groundwater in the principal aquifer (Chester Bed Formation) beneath the site. In 2019 the groundwater level was recorded between 13.16 and 13.28m bgl with local groundwater flow inferred to the south towards the River Irk / River Irwell.
- R5 – Building materials and services, including potable water supply pipes.

6.3.2 The following receptors have been discounted:

- Surface water. The River Irk is approximately 195m south of the site, with high density urban land uses between site and the river. The risk to surface water from the development is assessed to be negligible.
- Flora and fauna. The proposed structure will occupy most of the site footprint or hard landscaping. There will be no soft landscaping overlying residual Made Ground. Some planters within the external hard landscaping are proposed.

6.4 Potential Pathways

6.4.1 The following potential pathways may be present during construction and operation of the development:

- P1 – Human health exposure by ingestion of soil and/or dust, dermal contact of soil and/or dust and inhalation of dust and/or fibres.
- P2 – Migration of ground gases and/or vapour, ingress into enclosed spaces followed by inhalation or explosion.
- P3 – Infiltration and leaching of contaminants from the soil into groundwater.
- P4 – Lateral migration of contamination in the aquifer (dissolved and free phases).
- P5 – Creation of preferential pathways during construction for migration of mobile contaminants.
- P6 – Direct contact with construction materials and services.

6.5 Initial Conceptual Site Model

6.5.1 Based on the potential sources, pathways and receptors identified, an initial conceptual site model (CSM) for the site has been produced, which includes a risk assessment of the potential contaminant linkages (PCL), as presented in Table 8.

Table 8 Initial Conceptual Site Model and Preliminary Risk Assessment

Potential contaminant linkage (PCL)			Risk estimation			Comments
Source	Pathway	Receptor	Probability	Severity	Risk	
Human Health						
S1 – Made Ground	P1 – Ingestion, inhalation and dermal contact with soil and dust	R1 – Construction workers and site visitors	Low	Medium	Moderate to low	PCL1 Groundworkers will come into direct contact with soil during groundworks, including piling and excavations. Previous ground investigation (2019 before demolition) indicated low concentrations of contamination in soil and no asbestos detected. The levels of contamination identified in 2019 were below levels considered to pose an acute risk to construction workers. It is recommended that a limited phase of ground investigation is undertaken to confirm the latest condition. Risks to construction workers can be mitigated through good construction measures and controls, such as dust prevention and appropriate personal protective equipment (PPE).
	P1 – Fugitive dust	R2 – Site neighbours	Low	Minor	Very low	PCL2 Appropriate standard industry controls will need to be adopted to prevent fugitive dust emissions during excavation. The methodology will be defined in the Construction Environmental Management Plan (CEMP).
	P1 – Ingestion, inhalation and dermal contact with soil and dust	R3 – Future site users				No PCL The proposed development (building or external hard landscaping) will occupy the entire site footprint. There will be no direct contact pathway between any residual contamination in the Made Ground and future site users
S2 – Offsite PFS S3 – Offsite historical industries	P2 – Migration, ingress and inhalation of ground gases P5 – Preferential pathways		Low	Medium	Moderate to low	PCL3 No ground gases or vapours were observed during the ground investigation in 2019; however, coverage of the standpipes was limited and constrained by the former structures (now demolished). It is recommended that a limited phase of ground investigation is undertaken to confirm the latest condition, to include characterisation of any ground vapours.
Controlled waters						
S1 – Made Ground	P3 – Infiltration P4 – Lateral migration in aquifer	R4 – Groundwater in principal aquifer	Low	Mild	Low	PCL4 The proposed development will comprise building or external hardstanding which will prevent infiltration. Previous ground investigation indicated low concentrations of contamination in soil with no evidence of mobile contamination observed. Made Ground was underlain by cohesive Glacial Till of low permeability. The groundwater table in the principal aquifer was encountered at depth beneath the site, approximately 13.2m bgl. Appropriate standard industry controls will need to be adopted during piling.
Building materials						
S1 – Made Ground	P6 – Direct contact	R6 -Building materials	Low	Mild	Low	PCL5 Previous ground investigation indicated low concentrations of contamination in soil. Building materials, such as below ground concrete will be appropriately specified. It is recommended that the water supply company is contacted to agree specification of potable water supply pipes.

7.0 Conclusions and Recommendations

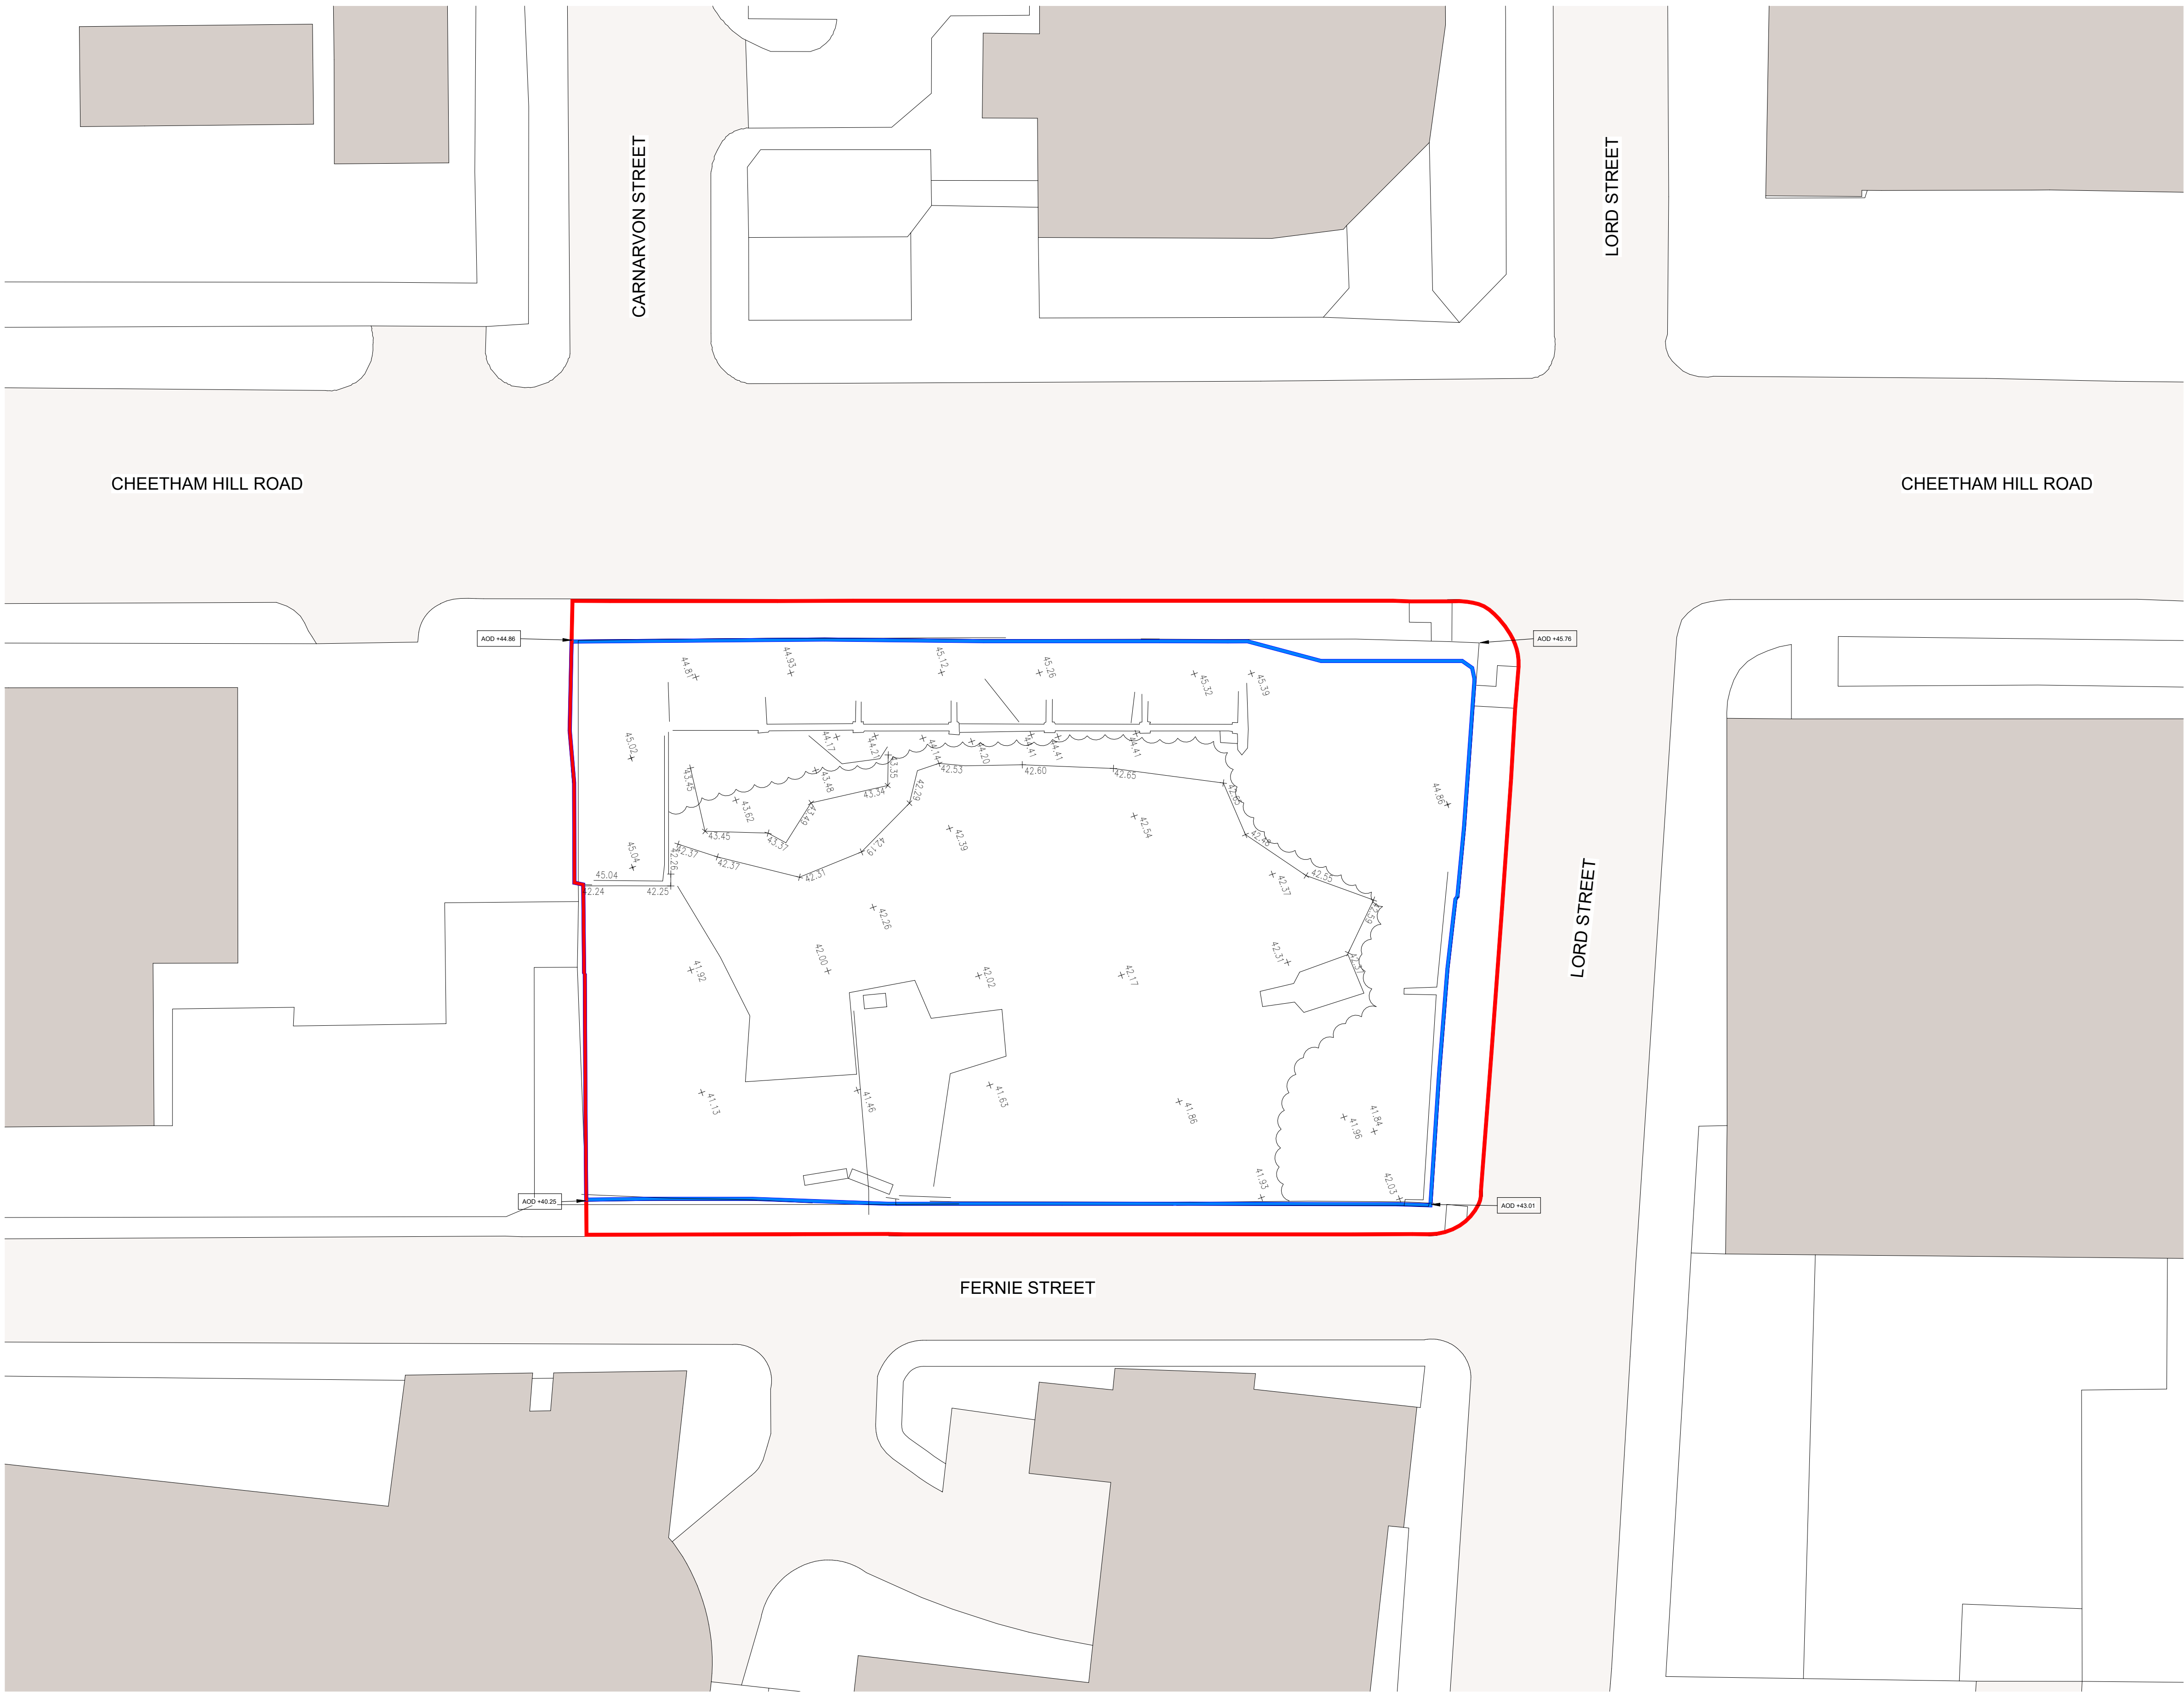

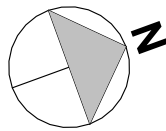

7.1 Conclusions

- 7.1.1 The proposed development comprises a high-rise residential development, with residential use from ground floor above a single basement level used for cycle parking, refuse stores, plant rooms.
- 7.1.2 The site has undergone at least two stages of historical development and demolition, including residential, commercial and retail uses. A lighting factory was present in the east of the site between 1980s and 2010. All buildings were demolished in 2019. An active petrol filling station was adjacent to the south of site.
- 7.1.3 Previous ground investigation was undertaken in 2019 before demolition. Ground conditions comprised Made Ground, up to 2.5m thick, over cohesive Glacial Till, with layers of sand from 4.5m bgl. The Chester Bed Formation (principal aquifer) was encountered from depths in the range of 14.7m to 20.9m bgl, comprising an upper weathered zone and rockhead from 24.1m bgl. Groundwater level was identified from approximately 13.2m bgl in the aquifer.
- 7.1.4 No visual or olfactory evidence of contamination was identified during the ground investigation. No significant sources of ground gases were observed. Previous testing of soils identified low concentrations of contaminants, which were typically below generic assessment criteria (GAC) for a residential end use. A slightly higher concentration of lead was recorded in one sample of Made Ground associated with the presence of ash and slag.
- 7.1.5 The potential for significant ground contamination to be present on-site is low, as demonstrated by the 2019 ground investigation. However, the former buildings presented some constraints to the investigation, and four locations could not be completed.
- 7.1.6 The conceptual site model and preliminary risk assessment conclude that the risks from ground contamination at the site range from low, to moderate to low.

7.2 Recommendations

- 7.2.1 It is recommended that a limited phase of ground investigation is undertaken to confirm the latest condition of the site, to include the following:
- Sampling and testing of shallow ground conditions, including areas inaccessible during the 2019 ground investigation, to characterise the Made Ground. The testing would be used to inform health and safety of construction workers and waste classification of arisings generated by development.
 - Assessment of the potential for any ground vapours associated with the adjacent petrol filling station, to confirm whether there is a need for vapour protection measures for the proposed development.

Drawing 1 – Existing Site Plan

NOTES

- All dimensions and levels are to be checked on site.
- Any discrepancies are to be reported to the architect before any work commences.
- Whilst information on this sheet is issued to scale, scaling directly from this drawing may result in inaccuracies. For precise measurements, refer to the stated dimensions or contact the Architect.
- This drawing shall not be reproduced without express written permission from AEW.
- Title overlay drawings and ownership boundaries are produced using all reasonable endeavors. AEW cannot be responsible for the accuracy or scale discrepancy of base plans supplied to them.
- All works are to be undertaken in accordance with Building Regulations and the latest British Standards.
- All proprietary materials and products are to be used strictly in accordance with the manufacturers recommendations.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.
