

Elevation parallel with tapered side

Following installation of timber framing the overall height, width and depth of opening formed for the chute is to be carefully checked before manufacture is commenced. The overall size should be adjusted if necessary to take account of minor variations between the dimensions shown on this drawings and the size of the opening formed on site to ensure that the chute fits snugly into the aperture available

Lead chute to be fabricated from code 8 lead sheet. The main body of the chute is to be formed from one sheet of lead with folded and bossed details to front and side and welded joints to concealed corners on the rear face
