

GOAL INTEGRATE BIOPHILIC DESIGN – CO-OP LIVE

Co-op Live has integrated biophilic design into fan and staff areas working alongside Dr Keith Whitehead who is a biophilia expert – [link](#) to article.

Green Wall

Our Green wall outside the main Entrances of C,D and E provides an attractive fan welcome as well as cleanses the air and absorbs noise etc and fans can integrate with the wall whilst waiting for doors to opening. This also supports MCFC fans going from the car park to the match so probably integrated with 2-3m plus fans a year.

Hideaway

One of our premium lounges got a green make-over and is now an oasis of calm for our VIP guests with faux plants providing a rainforest effect both pre and post show. With hanging plants above the bar and from the ceiling and also bamboo shades. Its also our preferred space for our Wednesday wellness yoga due to its green oasis calming effect.

AMP Club/ Suites

Our premium floor and suites use extensive wood as part of the acoustic treatment to aid sound proofing but it also doubles as biophilia bringing in wood to soften the concrete surrounds, texture and warmth in the black box.

OVO Lounge

OVO is one of our energy sponsor partners and they have fitted out there lounge this year using a range of biophilia treatment including faux plants and green logo walls.

Co-op Kitchen and F&B areas for all fans

Several of our Co-op grab and go food areas have faux greenery and wooden treatments bring in a natural façade for fans and integrating sponsor branding. Accessible by all fans.

Staff Office area

Finally, our staff area has natural light so this space is now adorned with pot plants and troughs of plants that the team have adopted and water/nurture. This has enhanced the staff area greatly and provided more privacy for workspaces, brings a more calming natural feel against the white walls and grey desks and staff have expressed a positive impact as a result.

Finally, we have enhanced the walking route which already has trees and shrubs but the additional wild flower meadows add colour and scent to the walking route for fans.

Co-op Live pledges to include biophilic design elements into every future renovation project over \$10M USD.

HEALTH & WELLNESS

- Identify opportunities to integrate new features of nature or concepts of nature into the facility.
- Engage vendor to provide proposal for cost and concepts in the spaces identified.
- Engage corporate partner to sponsor biophilic design elements, incorporating their branding and logo into the feature to offset cost.
