Could you please submit these replies to the relevant planning department together with the Method Statement (sent separately) on our behalf.
You will no doubt have a much better idea than us as to what they actually require.

Thanks

Hello Alan,

Please see the following in response to your questions

- Diameter of the penetrations: 2 No. 100Ø mm this will be for the pipework; we would back full and finish off with motor.
- We shall conceal all the pipes and cable in black plastic trunking, see images attached for the reference, we shall instruct the engineer to only fix in the mortar to prevent and damage to the brickwork.

- The condensing unit will be mounted on the flat roof, by use of rubberised 100mm deep feet, this will mitigate and noise transfer that Mayme generated but the unit, please see attached images for example.
- We have quoted for the multi system, that will be serving the Master Bedroom & Chris' bedroom, there is a possibility to add another system at a later date, we have quoited for the 6.8kW outdoor unit, but please note if you are considering adding this at a later date, we have not shown this cost on the quotation though, would you like me to add this?
- Please note, there has been a manufacture and material increase that will affect our original cost, I have attached the latest cost for your consideration.

Kindest regards,

Paul Griffin /
Project Sales

Hi Paul,

Believe it or not we have received Listed Building Consent and Planning permission for the air conditioning system for our apartment. They are now asking the following:

1. **Listed Building Consent:** Before works commence on site, the Council requires a Method Statement of the proposed works, which is usually prepared by the company

carrying out the installation.

This document must include:

1. The diameter of penetrations to accommodate the ducting or of the internal AC units.
2. Details of how these will be fixed to the internal walls.
3. Details of the methods of routing and fixing the AC system, as well as the finished materials (including the color to match).

I assume you can do this for us. - let me know if there are any costs.

I am confused what options for the system we (with your help) finally submitted. We want to start with a unit in our bedroom and possibly add the other two rooms later. Which outside unit did you submit for the outside unit - how many internal units will it support?

Nearly there!

Thank you,

Alan.
