Delegated officer report for planning application

Application no. 144144/FO/2025
Date registered valid: 30 September 2025
Proposal: Installation of digital LED totem.
Address: Outside No. 9 Stevenson Square, Manchester, M1 1DB
Ward(s): Piccadilly Ward

Applicant: BT Telecommunications PLC
Agent (if any): Mr Oliver Taylor Dalcour Maclaren
Case officer: Michael Pearson
Tel: 0161 219 2735
Email: michael.pearson@manchester.gov.uk

Recommendation: Refuse
Date of recommendation: 25/11/2025

Departure from Development Plan: No

Environmental Statement: Not required

Description of site/building

The application relates to a section of public footway to the front of no9 Stevenson Square. As existing, the application site is paved in tarmac and features a double sided LED totem. Said totem is coloured grey, with both digital displays making up roughly half of the height of the total unit. The site is then flanked by an outdoor seating area, which is expanded during the summer months, as well as several planters.

Listed building: Not applicable

Conservation area: Stevenson Square Conservation Area 1987

Tree Preservation Order: Not applicable

Description of area

The neighbouring area forms that of the Stevenson Square Conservation Area, and Stevenson Square itself, a large partly pedestrianised public space within the heart of Manchester's Northern Quarter neighbourhood, a thriving mixed use area that serves as the epicentre of cultural production and consumption within Manchester City Centre. Neighbouring built development is typically of older Victorian and Edwardian stock; this includes the Grade II listed Sevendale House and 49 Newton Street. Local uses are largely comprised of commercial class E restaurant and café uses, as well as Sui Generis drinking establishment uses that benefit from outdoor seating areas. Local regeneration efforts have seen the remodelling of Stevenson Square, with the provision of street trees and the removal of vehicular access through the square from west to east and vice versa. During the spring and summer months of the year, Stevenson Square is home to expanded provision of outdoor seating areas to the aforementioned commercial units to the point where much of the square is dedicated to said seating. The Stevenson Square Conservation Area features relatively few LED screen advertisements, with the majority of said advertisements being

located at the Conservation Area's southern tip along Piccadilly. 2no LED screen advertisements are then located to the north of the application site along the eastern side of Lever Street outside of the Stevenson Square Conservation Area.

Description of development

The application seeks consent for the installation of a digital LED totem following the removal of the existing totem on site.

The proposed totem would have a width of 1236mm, a depth of 350mm and a height of 2986mm. This is compared with the existing totem with a width of 889mm, a depth of 280mm and a height of 2896mm.

The totem would have the ability for users to place free phone calls and has the capability to have air monitoring equipment be installed.

Planning History

144196/AOH/2025 - Installation of 2no internally illuminated digital display screens – Application pending consideration in tandem with this application.

134583/FO/2022 - Creation of external seating area, installation of wall mounted lights, front entrance door and rear ventilation equipment – Approved October 2022.

121599/AO/2018 - Installation of 2 no. digital LED display screens to associated InLink (related planning application ref no. 121598/FO/2018) – Approved January 2019.

121598/FO/2018 - Full planning permission for installation of 1 no. 2.9m high InLink following removal of 2 no. telephone kiosks – Approved January 2019.

Consultations & Notification Responses

Publicity – A site notice and press notice were published. Neighbouring properties were notified of the proposals by letter. One letter of objection was received. The reasons cited for the objection can be summarised as follows:

- The totem is sited in a location where it obstructs pedestrian use of the footway. People that then use the totem's inbuilt services further block the neighbouring footway.
- The submitted elevations do not accurately show the impact of the proposed unit, with it failing to depict planters either side of it.

Councillor Marcus Johns – The proposals are located in an area where the City Council is actively trying to reduce street clutter. The proposal would reduce available pavement space and contribute to criminal and anti-social behaviour by reducing sightlines.

Counter Terrorism Policing North West – No objection.

Environmental Health – No objection subject to conditions relating to light from digital display screens, prohibition of external speakers/noise and a maintenance and management plan.

Greater Manchester Police – No objection.

Highways – The proposals would impede pedestrian movement and inclusive accessibility, and go against the City Council’s strategy of decluttering its pavements. Should the proposals be approved, conditions requiring the control of the content of the advertisement and a construction management plan should be attached.

Policy

The Places for Everyone Plan – Joint Development Plan Document, for nine of the 10 boroughs which make up Greater Manchester adopted on 21st of March 2024:

- Policy JP-Strat2 – City Centre
- Policy JP-P1 – Sustainable Places
- Policy JP-P2 – Heritage
- Policy JP-C5 – Streets for All
- Policy JP-C6 – Walking and Cycling

The Manchester Core Strategy – Development Plan Document 2012 – 2027 (“the Core Strategy”) was adopted by the City Council on the 11th of July 2012:

- Policy SP1 – Spatial Principles
- Policy CC9 – Design and Heritage
- Policy CC10 – Places for Everyone
- Policy EN1 – Design Principles and Strategic Character Areas
- Policy EN3 – Heritage
- Policy DM1 – Development Management

The Unitary Development Plan for Manchester – For the reasons outlined below the following saved UDP Policies are of relevance to this application:

- Policy DC15 – Advertisements, Hoarding and Posters
- Policy DC17 - Telecommunications
- Policy DC18 – Conservation Areas
- Policy DC19 – Listed Buildings
- Policy DC22 – Footpath Protection

National Planning Policy Framework (NPPF)

- Chapter 9 – Promoting Sustainable Transport
- Chapter 12 – Achieving well-designed and Beautiful Places
- Chapter 16 – Conserving the Historic Environment

Other Legislative Requirements

Planning (Listed Buildings and Conservation Areas) Act 1990

Design for Access 2

Streets for All Design Guide

Issues

Principle of the Development

The application would see the installation of a replacement digital totem on the public footway within the City Centre. Due to the nature of the proposal, as a piece of telecommunications infrastructure, it is considered that its installation is considered to be acceptable in principle and accords in principle with Core Strategy Policy DC17.1 subject to the matters discussed below. However, should the proposals be no more than a conduit for an advertisement, which is

discussed below, it would not be considered to be acceptable in principle, being contrary to the aforementioned policies.

Visual Amenity and Heritage

The application site is a section of public footway within Manchester City Centre, specifically, within the neighbourhood of the Northern Quarter, as well as that of the Stevenson Square Conservation Area. The Stevenson Square Conservation Areas is noted for its industrial past and for the square's use as a meeting place and public speaking area. Today, the Conservation Area retains many of its former Victorian industrial buildings, with them mostly relating to the cotton industry and being a variety of warehouses, showrooms or workshops. From the application site, the Grade II listed Sevendale House and 49 Newton Street are visible, and contribute positively to the Conservation Area's setting, being a strong link to its industrial past.

In more recent years, Stevenson Square has been the focus of ongoing regeneration works to improve its pedestrian environment. Principally, this has seen the closure of Hilton Street as a road accessible by vehicles, the creation of dedicated cycle lanes and the pedestrianisation of the majority of Stevenson Square (See below before and after photographs of Stevenson Square from September 2017 and October 2025). Additionally, ongoing efforts by the City Council to rationalise and declutter its footways has seen the removal of redundant pieces of street furniture within the locality.

The approval of the existing LED totem on site, approved under planning permission 121598/FO/2018, formed part of a wider strategy to declutter the City Centre's footways of redundant telephone boxes. As shown by the photographs above, the street scene surrounding the application site is a well trafficked and landscaped area of public pavement that contributes positively to the setting of the Conservation Area and neighbouring listed buildings.

The proposed development would see the existing LED totem on site replaced with a new model that is 1236mm wide, 350mm deep and 2986mm high. A comparison of the existing unit to that of the proposed is shown below:

Existing totem (left) and proposed totem (right)

The proposed totem in comparison to that of the existing, is a larger, bulkier and darker structure, representing an intensification of development on the application site, by virtue of which would have a greater impact on the setting of the Stevenson Square Conservation Area and neighbouring listed buildings, causing a low level of less than substantial harm to the setting of said heritage assets, as well as further impacting the local street scene, thereby undermining regeneration efforts. It is noted that when developments incur a low level of less than substantial harm to the significance of a heritage asset that the development should be allowed should it be demonstrated that the public benefits of the proposal outweigh the identified harm. This is discussed later within the report.

While in a different context within the City, it is noted that in an appeal decision for application 142695/FO/2025 (Appeal ref: APP/B4215/W/25/3369446), the Inspector described a similar Street Hub 2 totem model as such:

Due to a combination of its height, width and freestanding position close to the edge of the carriageway, the proposed hub, with its large digital advertisement panels on both sides, would represent a dominant and obtrusive feature on the pavement.

Further to the above, the proposed replacement digital totem does not contribute to the rationalisation of on street infrastructure, rather, it exacerbates existing issues with street clutter, distracting from the area's historical features of note and undermining its overall appearance, making the local area a less attractive place to be in or pass through. The proposal is therefore inconsistent with MCC's decluttering strategy and fails to meet broader design standards and policies.

The proposed development, by virtue of its imposing appearance and its contribution to street clutter, is therefore considered to be contrary to Places for Everyone Plan Policy JP-Strat2, which seeks to improve areas of public realm, walking and cycling facilities, by virtue of its increased footprint and overly dominant appearance. Similarly, it is contrary to Places for Everyone Plan Policy JP-C5 which seeks to ensure streets are welcoming for all.

Public Benefits

The proposal would result in less than substantial harm to the setting of heritage assets. As required by paragraph 215 of the NPPF, it is necessary to consider whether any public benefits exist to outweigh this harm.

The Applicant has stated that there are public benefits associated with the installation of the totems. The Applicant's planning statement submitted with the application highlights the national policy context encouraging investment in mobile infrastructure and 5G provision. The Council has also published the Manchester Digital Strategy 2021 – 2026, outlining its goal to invest in digital infrastructure.

The applicant has stated that the phone service provided in the totem would provide access to public services, multiple accessibility options, secure power-only USB ports for rapid device charging, free phone calls, a direct emergency call button, community and emergency awareness messaging. All of which are currently provided by the existing structure.

The applicant has submitted some BT usage data, which covers the entire BT InLink and Street Hub estate, from the period of 1st April 2024 to 31st March 2025, detailing the number of calls made to various charities and services.

The data submitted covers all BT units across the country. There is no data provided as to the specific existing InLink Unit to demonstrate how many calls have been made from this unit that could demonstrate the public benefit it has, nor is there an average provided to show how many calls are made yearly per totem unit.

The City Council's does not dispute that free public Wi-Fi can have benefits for visitors and residents who wish to connect to the internet for free, however, the quality of the service depends on range to the Wi-Fi source. The range quoted for the updated Smart Hub is not stated, it is not clear what range a user has access to for Wi-Fi, and therefore the public benefit cannot be accurately determined.

The success of public Wi-Fi delivered in this way depends on density and frequency of similar Wi-Fi devices on streets - this could quickly become problematic for street furniture clutter. As such, the hubs do not offer comprehensive coverage, and the benefits offered are limited.

There are concerns with public Wi-Fi when it comes to cyber security and the security of the network, the smart solution requires an email to access the service and has several measures in place to control what potentially harmful material is viewed online. However, as the nature of public Wi-Fi is to be open, it is more susceptible to cybersecurity concerns for users than home or business Wi-Fi connections.

Digital connectivity in city centre locations is notably hard to achieve well at scale, quality and cost for users. Whilst free public Wi-Fi is one solution, it is not the only solution available on the market. For example, 4G/5G small cells to increase mobile capacity and user experience or public mesh networks.

It is not clear whether small cell capability is included in the Smart Hub as standard, and if the technology will be activated.

Even so, small cells can also be installed on existing street furniture that is more fundamental to the public highway, such as streetlights. The installation of small cells on such existing necessary street furniture would be a less visually harmful manner to provide better digital connectivity that would also have a less harmful impact upon the setting of heritage assets.

In addition, when small cells are placed at higher altitudes, such as on street lighting, they achieve better reception. It is not clear if the height of the screens is optimal for small cell network coverage.

It is also not clear if any proposed small cell solution in the Smart Hubs would be a neutral host and provide connectivity across more than one operator or if they are exclusively for the use of EE. A neutral host small cell would be preferable for the city's needs.

If the small cells were only to host EE, MCC's Digital Strategy Team have advised that mapping capacity data shows that EE does not currently encounter significant capacity problems in the Piccadilly area. If the small cells were only to serve EE, the public benefits would be limited.

The applicant states that there is potential for IoT environmental sensors within the Smart Hubs, however, it is not clear how Local Authorities would access this data or any associated costs or considerations.

There is no evidence to suggest that data from previous BT Smart Hub – and other like solutions has been shared with MCC. It has not been made clear in the application that BT would share this data moving forwards. Without confirmation of this, the public benefits are again limited.

In addition, there is already a significant air quality monitoring structure in place in Piccadilly Gardens and so there is not more requirement for air quality monitoring in this particular area.

The planning statement notes that the digital screens can be used by the Council as there is 5% free screen time allocated on each BT Street Hub unit. There is no detail as to how this would be provided in practice.

In order for people to use the Smart Hubs a degree of technical knowledge of how they work and what their functions are is needed. It is not clear what resource BT will put into letting the public know the full functionality of the Smart Hub and how they can easily replace phone booths.

To conclude, given the above, it is considered that while there maybe be some public benefits, they are limited. It is also noted that the existing totem has similar capabilities, and the limited public benefits of this application are therefore a marginal improvement of the existing circumstance.

The totem does not provide the public benefits that many other items of street furniture do, such as the introduction of cycle hubs, which supports the active travel objectives of the City Council.

In addition, many of potential public benefits mentioned by the applicant in their submission cannot be currently accurately determined, due to a lack of substantial and concrete information provided in the submission as to what coverage precisely would be provided, how data collected would be provided to the Local Authority, and definitive strategies confirming how many of these public benefits would be actually be delivered.

Further clarity would be required detailing the precise extent of these public benefits and outlining how these public benefits would actually be provided. Otherwise, there is no assurance that many of these public benefits would be delivered.

On this basis, the City Council cannot accurately determine that the extend of many of the public benefits, it can only be determined that limited marginal public benefits will be provided.

When these limited marginal public benefits are weighed against the medium level of less than substantial harm, as well as their emphasising of the prevalence of street clutter, impact upon visual amenity and heritage, it is not considered that the harm is outweighed and therefore the requirements of paragraph 215 of the NPPF have failed to be met.

Sections 66 and 72 of the Listed Buildings and Conservation Areas Act 1990 require that special consideration is given to the preservation of the significant fabric and setting of listed buildings and conservation areas. For the reasons outlined above, it is not considered that the proposal preserves the setting of listed buildings or the character of the conservation area, causing a low level of less than substantial harm to their setting.

By virtue of the development's adverse visual impacts discussed above, as well as the lack of proven public benefit that would be brought about via the implementation of the proposed works, it is considered that the proposal is contrary to Places for Everyone Plan Policies JP-P1 and JP-P2, Manchester Core Strategy Policies SP1, CC9, EN1, EN3 and DM1, Saved Unitary Development Plan Policies DC18 and DC19, and the Planning (Listed Buildings and Conservation Areas) Act 1990, which collectively seek to preserve and enhance the visual appearance of the local environment and areas of historical significance.

Residential Amenity

The proposed development would see the installation of a replacement LED totem within a section footway that forms part of a partly pedestrianised public square. With regard to assessing the totem's impact on residential amenity, it is not considered the change in its dimensions would have any perceivable impact on amenity in regard to overshadowing or loss of light. It is acknowledged that an objection has been received by a local councillor that sites concern over the proposals impact on anti-social and criminal behaviour with it impacting local sightlines. Whilst it is appreciated that the proposed totem is wider than that of the existing, it is not considered that this impact would be so great as to enable an uptick in the anti-social or criminal behaviour within the local area. Both Greater Manchester Police and Counter Terrorism Policing North West do not object to the proposal. On this basis, the proposal would have an acceptable impact on local residential amenity, in accordance with Core Strategy Policy DM1 and the National Planning Policy Framework.

Highway Safety and Access

The application site is that of a section of public footway within Stevenson Square. As previously noted within this report, the City Council is within the midst of a strategy to declutter Manchester City Centre's footways and the pedestrian environment, with particular attention being paid to those areas that are subject to extensive regeneration efforts, like that of Stevenson Square. Stevenson Square has undergone extensive works to pedestrianise it, with footway improvements and road closures having been implemented in recent years.

The section of footway within Stevenson Square affected by the proposals lies on the eastern side of Lever Street. Said area is a busy section and constrained section of footway being adjacent to the only pedestrian crossing across Lever Street within Stevenson Square, and with the footway featuring permanent planters and crash barriers that double as public benches. Furthermore, during the summer months, the majority of Stevenson Square is given over to outdoor seating areas that service the many drinking establishments that front onto it, further constraining the local footway.

At the time of the approval of planning permission 121598/FO/2018, Stevenson Square was a major crossroads with Lever Street providing through access from the south to north and Hilton Street providing through access from the east to west and vice versa. Furthermore, the local footway was clear of infrastructure designed for pedestrian's safety. Additionally, it should be noted the proposed totem approved under said permission was approved on the basis that 2no existing telephone boxes, 1no within Stevenson Square, and the other at the junction where Park Place meets Cheetham Hill Road would be removed (See photograph from Design & Access Statement submitted with application 121598/FO/2018 and application site as of September 2017).

Install Junction of Stevenson Square and Lever Street, Manchester	Proposed Removal 1no BT call box - Junction of Stevenson Square and Lever Street 1no BT call box – Corner of Cheetham Hill Road and Park Place
	

In contrast to this, the application site is now an area with high levels of pedestrian activity and features numerous elements of street furniture, which though designed for the safety of pedestrians, does somewhat constrain the local footway (See photographs below of the application site from October 2025).

Existing views of the application site from October 2025

The adoption of the Streets for All Design Guidance by the Greater Manchester Combined Authority in November 2023 reinforces this position on reducing street clutter, recommending that in reviewing existing situations, street furniture should be rationalised wherever possible, clutter removed, and clear pedestrian routes provided throughout, achieved via clear and legible zones for pedestrian routes and street furniture.

The impact of the proposals on the footway would see the footprint of the totem increase by 347mm. Whilst such an increase may seem innocuous at face value, which is then reinforced when viewing the proposed site plan, which notes that the totem would have a clearance of 5.9m to the north and 7.3m to the south. However, the proposed site plan is considered to be inaccurate, as shown by the site photographs above, with said plan failing to include the permanent planter and crash barrier to the north of the totem, whilst also misrepresenting the short distance between the planters to its south and the totem itself. In light of this, it is considered the increased footprint of the totem would further constrain the local footway, making movement

difficult in particular regard to wheelchair, walking aid, mobility scooter and pram users who require wider clearance distances.

Highways within their consultation response note that the proposals would impede pedestrian movement, with other street-furniture and external seating areas located in close proximity to the development. Highways within their response then go on to state that the development, due to the constrained nature of the footway, could lead to reduced levels of pedestrian comfort, local pedestrian navigation/confusion and safety issues particularly for those with accessibility needs. This then raises the concern that congested areas can result in pedestrians stepping-out onto the adjacent carriage way which presents a safety concern.

In light of the above, it is considered the proposal would by virtue of its location within a constrained area of footway and its increased footprint, would have an unacceptable impact on the accessibility of the local footway with particular regard to wheelchair, walking aid, mobility scooter and pram users. This is contrary to Places for Everyone Plan Policies JP-P1, JP-C5 and JP-C6, Manchester Core Strategy Policies SP1, CC10 and DM1 of the Manchester Core Strategy (2012), Saved Unitary Development Plan Policy DC22 Streets for All Design Guide and Design for Access 2, which all seek to protect against proposals that would harm pedestrian accessibility, with particular regard to those that have mobility constraints and families, and promote development to enhance the pedestrian environment.

Conclusion

In light of the above, the proposed development has been found to have an unacceptable impact on the appearance of the local street scene and setting of neighbouring listed buildings and Stevenson Square Conservation Area, with it not having an identifiable public benefit to outweigh the recognised harm. Furthermore, the development would cause an unacceptable impact on the accessibility of the local footway, in particular regard to wheelchair, walking aid, mobility scooter and pram users. The development is therefore contrary to Places for Everyone Plan Policies JP-Strat2, JP-P1, JP-P2, JP-C5 and JP-C6, Manchester Core Strategy Policies SP1, CC9, CC10, EN1, EN3 and DM1 of the Manchester Core Strategy (2012), Saved Unitary Development Plan Policies DC18, DC19 and DC22, Design for Access 2, Streets for All, the Planning (Listed Building Consent and Conservation Areas) Act 1990, and the provisions of the National Planning Policy Framework. The application is therefore recommended for refusal.

Other Legislative Requirements

Equality Act 2010

Section 149 (Public Sector Equality Duty) of the Equality Act 2010 requires due regard to the need to: Eliminate unlawful discrimination, harassment and victimisation and other conduct prohibited by the Act and; Advance equality of opportunity between persons who share a protected characteristic and persons who do not share it. The Equality Duty does not impose a legal requirement to conduct an Equality Impact Assessment. Compliance with the Equality Duty involves consciously thinking about the aims of the Equality Duty as part of the process of decision-making.

Human Rights Act 1998 considerations

This application needs to be considered against the provisions of the Human Rights Act 1998. Under Article 6, the applicants (and those third parties, including local residents, who have made representations) have a right to a fair hearing and to this end the local planning authority must give full consideration to their comments.

Protocol 1 Article 1, and Article 8 where appropriate, confer(s) a right of respect for a person's home, other land and business assets. In taking account of all material considerations, including Council policy as set out in the Core Strategy and saved policies of the Unitary Development Plan, the Director of Planning, Building Control & Licensing has concluded that some rights conferred by these articles on the applicant(s)/objector(s)/resident(s) and other occupiers and owners of nearby land that might be affected may be interfered with but that that interference is in accordance with the law and justified by being in the public interest and on the basis of the planning merits of the development proposal. She believes that any restriction on these rights posed by the recommendation given is proportionate to the wider benefits of and that such a decision falls within the margin of discretion afforded to the Council under the Town and Country Planning Acts.

Recommendation: Refuse

Article 35 Declaration

Officers have worked with the applicant/agent in a positive and proactive manner in determining this application by assessing the proposal against relevant planning policies and all material considerations, identifying matters of concern with the proposal and discussing those with the applicant/agent. However, the issues identified are considered to be so fundamental that it has not been possible to negotiate a satisfactory way forward and due to the harm which has been clearly identified within the reason for the refusal, approval has not been possible.

Reasons for recommendation to refuse

1) The proposed totem, by virtue of its siting, scale, materiality, and appearance, would form an overly dominant, incongruous and visually obtrusive feature within the street scene. In addition, the totem would also add to clutter, alongside other street furniture and fixtures, within a prominent location in the City Centre. The proposal would have a negative effect upon current efforts by the City Council to de-clutter, regenerate, and improve the adopted highway within the City Centre environment in the interest of optimising the pedestrian environment and public realm, such as the regeneration and pedestrianisation of Stevenson Square. The proposal would therefore result in an unduly harmful impact on local visual amenity, the character of the street scene, and the setting of nearby listed buildings and the Stevenson Square Conservation Area. The totem would be read as a dark, modern and incongruous structure in this setting, forming an unduly harmful juxtaposition and low quality addition to the setting of the listed buildings and the character of the conservation area. This would result in less than substantial

harm to the significance of the designated heritage assets and the required public benefits do not exist to outweigh the harm. The totem is therefore contrary to the provisions of Places for Everyone Plan Policy JP-Strat2, JP-C5, JP-P1 and JP-P2, policies SP1, CC9, EN1, EN3 and DM1 of the Manchester Core Strategy (2012), saved policies DC18, DC19 and DC22 of the Unitary Development Plan for the City of Manchester (1995), the provisions of the National Planning Policy Framework, and the Planning (Listed Buildings and Conservation Areas) Act 1990.

2) The proposed totem by virtue of its siting within the footway, large footprint and the constrained nature of the surrounding footway, would have an unacceptable impact on the accessibility of the local footway, with particular regard to wheelchair, walking aid, mobility scooter and pram users. The totem is therefore contrary to the provisions of Places for Everyone Plan Policies JP-P1, JP-C5 and JP-C6, Manchester Core Strategy Policies SP1, CC10 and DM1 of the Manchester Core Strategy (2012), Saved Unitary Development Plan Policy DC22, Design for Access 2, Streets for all Design Guide and the provisions of the National Planning Policy Framework.
