Appendix 3 - Sustainable Transport Information

Appendix 4 – TRICS outputs

1.0 Introduction

- 1.0 iRIS Sustainable Planning has been appointed to prepare this Transport Assessment (TA) in support of a planning application for a proposed SEMH School comprising 540 sq meters GFA at the Cornbrook Enterprise Centre.
- 1.1 This TA assesses the traffic impact associated with the 540 sq m of GFA. It includes details on access design, parking and traffic impacts at local study area junctions as agreed with the highways officers of Transport for Greater Manchester.

Background

- 1.2 The development is located at the former Cornbrook Enterprise Centre and is currently disused.
- 1.3 **Figure 1** shows the location of the application site in relation to the immediate location and wider surrounding area. The proposed site layout plan for the application site is included in **Appendix 1**.

2.0 Policy Context

- 2.1 The following paragraphs outline the relevant planning policies in respect of the proposed development, including how the proposals would comply with these planning policies in relation to highways and traffic impact.

National Planning Policy Framework (NPPF)

- 2.2 In March 2012, the Department for Communities and Local Government published the NPPF document which replaces historical National Planning Policy. This has since been updated and a revised NPPF document was published in July 2018 and the latest in December 2024.
- 2.3 The NPPF constitutes guidance for local planning authorities and decision-takers both in drawing up plans and as a material consideration in determining applications.
- 2.4 Planning law requires that applications for planning permission must be determined in accordance with the local development plan, unless material considerations indicate otherwise. It suggests that encouragement should be given to solutions which support reductions in greenhouse gas emissions and reduce congestion. In preparing Local Plans, local planning authorities should therefore support a pattern of development which, where reasonable to do so, facilitates the use of sustainable modes of transport.
- 2.5 Part 9 of the revised December 2023 NPPF relates to 'Promoting sustainable transport' and highlights the needs for transport issues to be considered from the earliest stages of development proposals, *"so that: a) the potential impacts of development on transport networks can be addressed; b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated; c) opportunities to promote walking, cycling and public transport use are identified and pursued; d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains; and e) patterns of movement, streets, parking and other transport considerations are integral to the design of schemes, and contribute to making high quality places."*
- 2.6 In relation to applications for development, paragraph 116 of the revised NPPF stipulates that, " applications for development should: a) give priority first to pedestrian and cycle movements, both within the scheme and with neighbouring areas; and second – so far as possible – to facilitating access to high quality public transport, with layouts that maximise the catchment area for bus or other public transport services, and

appropriate facilities that encourage public transport use; b) address the needs of people with disabilities and reduced mobility in relation to all modes of transport; c) create places that are safe, secure and attractive – which minimise the scope for conflicts between pedestrians, cyclists and vehicles, avoid unnecessary street clutter, and respond to local character and design standards; d) allow for the efficient delivery of goods, and access by service and emergency vehicles; and e) be designed to enable charging of plug-in and other ultra-low emission vehicles in safe, accessible and convenient locations.”.

- 2.7 Paragraph 115 of the Revised NPPF is key in terms of clarifying when a development should or should not be allowed planning permission. Paragraph 115 reads as follows: *“Development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe.”*
- 2.8 The outcomes of this report demonstrate that the proposal would not have an unacceptable impact on highway safety, neither would the residual cumulative impacts on the road network be considered ‘severe’. On this basis, it is considered that the proposed development is planned in accordance with the Revised NPPF policy.

Regional Transport Policy

- 2.9 Greater Manchester Transport Strategy 2040 sets out 4 key goals: Supporting Sustainable Economic Growth, Protecting Our Environment, Improving Quality of Life for All, and Developing an innovative City-Region. *“In 2019, we set out our ambition to improve our transport system so that - by 2040 - 50% of all journeys in Greater Manchester are made by public transport or active travel, supporting a reduction in car use to no more than 50% of daily trips. This will mean one million more sustainable journeys every day in Greater Manchester by 2040, enabling us to deliver a healthier, greener and more productive city-region. We call this the transport ‘Right Mix’. Achieving the Right Mix is expected to lead to zero net growth in motor vehicle traffic in Greater Manchester between 2017 and 2040.”*

The strategy sets out the ambition to “enable people to move seamlessly between services on a single, high quality, easy-to-use network; providing choice and supporting low-car lifestyles, made possible by integrated land use and transport planning.” It goes on to say “A fundamental aspiration of the 2040 Transport Strategy is to provide Greater Manchester’s residents, visitors and businesses with real choice in how they and their goods travel. We must provide sustainable travel options that offer an attractive alternative to the private car and minimise the negative impacts of freight traffic.”

Integration with Spatial Planning

- *A further fundamental aspect of this this will be minimising the need to travel. This will be achieved by creating local neighbourhoods where people can live, work and access services and shops, alongside behavioural change, such as mode shift and flexible and home working. Integration with spatial planning is critical in influencing people’s travel choices. Fundamentally, the transport network needs to connect the places people live with the places where they study, work and visit. Locating housing close to facilities and public transport tends to reduce car use. While most of Greater Manchester is served by public transport, some developments have been designed around the car, making them difficult to reach in any other way.*
- The document goes on to say;

TfGM and local planning authorities will continue to work with developers to better integrate transport and new development in accordance with the principles of:

- *Reducing the need to travel;*
- *Reducing the need to travel by car, and the distance travelled;*
- *Maximising accessibility by sustainable modes;*
- *Making the best use of existing infrastructure, particularly through increasing the density of development close to public transport nodes;*
- *Maximising opportunities to provide additional public transport; and*
- *Designing to encourage active travel. Network management and safety*

Local Policy

2.10 The Manchester City Centre Transport Strategy to 2040 sets out seven ambitions for the city.

- Ambition 1: Walking is the main way of getting around the city centre;
The city centre is safe and easy to walk around with clear, well-signed routes.
Pavements and public spaces will be high quality, green and accessible; catering for everyone, no matter what their age or mobility.

- Ambition 2: The city centre is cleaner, greener and less congested;
Traffic levels and pollution in the city will be reduced, through the removal of non-essential and polluting vehicles traveling into and across the city centre.
- Ambition 3: More people choose to cycle to destinations within the city centre
There is an attractive, safe, protected and efficient cycling network into and through the city centre, delivered as part of our city-region's proposed Bee Network. Cycling is supported with good parking facilities close to key destinations, and hire bikes are easy to access in the city centre.
- Ambition 4: The city centre benefits from better public transport connections
Manchester and Salford city centres are well connected by rail to other cities and towns (to support commuting, business and leisure trips). There is sufficient capacity on peak hour Metrolink, bus and rail services, and better integration between modes to ensure that public transport is an attractive alternative to car travel. Public transport operating hours and service patterns support travel needs at evenings and weekends, particularly for leisure and commuting trips. Cross-city services are convenient, reliable, safe and secure, clean, quiet and accessible to all.
- Ambition 5: Parking in the city centre is smarter and integrated with other modes
Car parking is reduced and appropriately located in the city centre but remains available to those with specific mobility needs that rely upon accessible parking provision. Parking will be reviewed close to city centre public transport hubs, with people encouraged to travel to those locations using the public transport and active travel options provided. Outside of the city centre, car parking is smarter and better integrated with other modes of travel.
- Ambition 6: Goods are moved and delivered sustainably and efficiently into and within the city centre
Essential goods can access our city centre, with a shift towards cleaner, more efficient vehicles and processes that minimise the negative impacts of deliveries and servicing.
- Ambition 7: Innovation is embraced where it benefits the city centre and its users
We support creating a better travel experience in our city centre using new technologies and emerging methods of travel. This includes embracing new ways of working, to optimise and improve transport services, customer information and asset management.

- 2.11 Therefore, this TA has been prepared to comply with the transport strategies and policies outlined in this section, where sustainable travel would be encouraged, and capacity assessments would be undertaken to demonstrate that the proposed development would not create severe impact on the surrounding highway network.

3.0 Existing Conditions

Site Location

- 3.1. The site is located to the north east of Barrack Street, north west of Quenby Street, which is situated approximately 1.2 km to the north west of Hulme centre, 2.5 km to the south west of Manchester City Centre.
- 3.2. The site location in relation to the local highway network and surrounding land uses is shown in **Figure 1**. The site is bounded by residences to the north east and north west, and by Quenby Street to the south east and Barrack Street to the south west.
- 3.3. The site itself is currently unoccupied, having formerly been in use as office Office and Studio space as Cornbrook Enterprise Centre.
- 3.4. The site has a GMAL level of 7 with a score of 22.28.

Surrounding Highway Network

- 3.5. Lower Moss Lane is a single carriageway residential road and is subject to 20 mph speed limit. It is constructed to modern standards using modern materials. Lower Moss Lane has a carriageway width of 5.8 meters at the site frontage, which increases to 6.9 meters towards the junction with the A56 Chester Road. Footways are provided along both sides of the carriageway and there is a good system of street lighting. Lower Moss Lane terminates to the north west at the simple priority junction with the A56 Chester Road. Access to Quenby Street is via a simple crossroads junction.
- 3.6. Quenby Street is a single carriageway residential road and is subject to 20 mph speed limit. It is constructed to modern standards using modern materials. Quenby Street has a carriageway width of 6.3 meters. Footways are provided along both sides of the carriageway and there is a good system of street lighting. Quenby Street joins Barrack Street at its south western extremity, and it meets Lower Moss Lane at a simple crossroads junction to the north east.
- 3.7. Barrack Street is a single carriageway residential road and is subject to 20 mph speed limit. It is constructed to modern standards using modern materials. Barrack Street has a carriageway width of 6.7 meters at the proposed site access. The access measures 4.0 meters. Footways are provided along both sides of the carriageway and there is a good system of street lighting. Barrack Street joins the A56 Chester Road at a simple priority junction.

Wider Highway Network

- 3.1. The A56 Chester Road is a 2 + 1 road at the vicinity of the junctions with Lower Moss Lane and Barrack Street. The A56 Chester Road becomes dual carriageway to the north east of

the access with Lower Moss Lane and links to the A57 (M) at the Deansgate Interchange. The A56 Chester Road then continues to its termination at Broughton in North Yorkshire. To the south west of the junction with Barrack Street, the A56 becomes dual carriageway when it becomes the A56 Bridgewater Way. This provides links with the A5081 and M60 before arriving at its termination at Chester in Cheshire.

Road Safety

- 3.2. Personal Injury Accident (PIA) data has been obtained from Crashmap.co.uk for the latest available full five-year period (2020-2024). The study area includes Quenby Street, Lower Moss Lane, Barrack Street and the section of the A56 Chester Road between Ellesmere Street and the signalised roundabout junction at the Deansgate Interchange. The PIA data for is included in **Appendix 2** and summaries of these injury accidents is included in the following paragraphs.
- 3.3. A total of 14 PIAs occurred on Quenby Street, Lower Moss Lane, Barrack Street and the section of the A56 Chester Road between Ellesmere Street and the signalised roundabout junction at the Deansgate Interchange, between in the 5 year period 2020 and 2024 inclusive. 13 of these collisions were of slight severity, 1 serious and 0 fatal.
- 3.4. Of these, 1 took place on Quenby Street, 1 took place at the junction of Barrack Street and the A56 Chester Road and 12 took place on the A56 Chester Road.
- 3.5. These injury accidents are summarised in **Table 1** below and the complete accident data is available in **Appendix 2**:

Road / Junction	Car	P2W	Cyclist	Pedestrian	Other
A56	10	0	7	3	2 – Taxi 1 – Unknown 1 - Van
Barrack Street	1			1	
Quenby Street	1				

- 3.6. The serious PIA took place at 1640 on 11th October 2023 at the junction of Barrack Street and the A56 Chester Road. The weather was fine without high winds and the road surface was wet or damp. The incident occurred between a male pedestrian aged 46-55 and a car

as the car was moving off. The car struck the pedestrian at the front of the vehicle, seriously injuring the pedestrian.

- 3.7. These reports suggest that there are no patterns attributable to defective road conditions or other physical characteristics associated with the road layout, such as visibility which would advocate an identifiable course of action being required. As such, no further PIA analysis is considered necessary at this stage or as part of this planning application.

Parking

- 3.8. 30 number vehicular parking spaces are included within the site plan. This is enough to accommodate the 20 number proposed staff for the facility whilst allowing for school buses and school taxis to access the site for drop off.
- 3.9. Drop offs can be facilitated on Quenby Street and Barrack Street as parking restrictions are in place from 1100 to 1500. A controlled parking zone is located in these areas, however it is allowable within this CPZ to stay for up to 3 hours with no permit.

4.0 SUSTAINABLE TRAVEL ACCESSIBILITY

Introduction

- 4.1. This section sets out the existing walking, cycling and public transport facilities in proximity of the site. The 15 and 30 minute walking, cycling and public transport isochrones are included in **Appendix 3**.

Pedestrian Accessibility

- 4.2. The Chartered Institution of Highways and Transportation (CIHT) publication 'Guidelines for Providing for Journeys on Foot' (2000) describes what are considered acceptable walking distances for pedestrians without mobility impairment.
- 4.3. The guidance suggests that for commuting, school, and sight -seeing, up to 500m is the desirable walking distance, up to 1,000m is an acceptable walking distance, and 2,000m is the preferred maximum walking distance. The 2km 'preferred maximum' walking distance catchment suggest that students and potential staff residing in Hulme, Deansgate, Ordsall and Old Trafford areas would have the opportunity to walk to school.
- 4.4. In addition to local residential areas, the 1km 'acceptable' walking distance from the site covers Cornbrook Tram Stop, bus stops on the A56 Chester Road, Quenby Street Mini Market, Barrack Park, St George's Park, Hume Skate Park, EZ Supermarket, and a variety of shops and services on nearby A5067 Stretford Road.

- 4.5. In terms of existing pedestrian infrastructure, footways are provided along Quenby Street, Barrack Street and Lower Moss Lane and there is a good system of street lighting.

Cycling Accessibility

- 4.6. It is generally accepted that cycling has the potential to substitute short car trips, particularly those under 5 km, and to form part of a longer journey by public transport. Average cycle time for 5 km is 15 minutes.
- 4.7. **Appendix 3** illustrates a 15 minute catchment from the site, which shows that a sizeable residential catchment area is within acceptable cycling distance.
- 4.8. As shown, the 30 minute catchment covers includes Manchester and its surrounding towns and villages including Salford, Stretford, Urmston, Eccles, Sale and Didsbury where there are a range of shops and recreational opportunities.
- 4.9. The site is well equipped for cycling, with the closest off road cycleway leading through Barrack park, within 50 meters of the site access.
- 4.10. National Cycle Route 6 runs 900 meters from the site. National Cycle Network Route 6 passes through Watford, Luton, Milton Keynes, Northampton, Market Harborough, Leicester, to Sheffield, Manchester and Lancashire to Windermere.

Public Transport Accessibility

Bus

- 4.11. In relation to bus accessibility, the Chartered Institute of Highways and Transportation's (CIHT) 'Buses in Urban Developments, January 2018' publication, recommends that the maximum walking distance to 'single high-frequency routes (every 12 minutes or better)' should be 400m. For less frequent bus routes, the maximum recommended walking distance is 300m.
- 4.12. The closest serviced bus route is located on the A56 Chester Road, less than 250 meters from the site. Services from this stop include the 255 Partington to Manchester Picadilly Gardens, which operates at 30 minute intervals Mon-Sun, and the X50 Manchester Picadilly Gardens to The Trafford Centre, which operates at 30 minute intervals Mon-Sun. A summary of these routes is included in **Appendix 3**.
- 4.13. The GMAL score for the site is 22.28 with a rating of 7.

Tram

- 4.14. Cornbrook Tram Stop is located approximately 700m from the site, approximately 10 minutes walk. This stop provides frequent, regular services across the Manchester tram network. There is approximately 1 departure per minute.

Summary

- 4.15. The information contained in this section of the report demonstrates that the site is situated in a sustainable location, within walking distance of local residential areas, amenities and bus stops.
- 4.16. The existing pedestrian and cycling infrastructure would facilitate staff walking and cycling to the site from nearby residential areas and public transport interchanges.

5.0 PROPOSED DEVELOPMENT

Overview

- 5.1. The proposed development comprises up to 540 sq. m. of GFA and 30 number parking spaces. The proposed site layout plan is included in **Appendix 1**.
- 5.2. Vehicular access to the development is from Barrack Street.
- 5.3. The access point measures 4.0 meters.
- 5.4. No changes are proposed to be made to the access point.
- 5.5. At the access to Barrack Street, a visibility splay of 2.5m x 25m is available.

Parking Provision

Car Parking Spaces

- 5.6. There are no guidelines for Schools set out within the Manchester City Council parking standards, with the closest being for higher and further education. This requirement is for 1 parking space per 2 number staff, with disabled provision being determined on a case by case basis.
- 5.7. Parking spaces are provided in excess of the number of staff expected at the facility, and 3 number (10 percent) of these spaces can be allocated for disabled parking.
- 5.8. Overall, the car parking provision across the site will be a balance between meeting demand and promoting sustainable means of travel by reducing the need for a private car. The cycle parking provision will facilitate future users able to travel by sustainable modes.

Cycle Parking

- 5.9. For bicycles, again there are no guidelines for schools set out within the Manchester City Council parking standard. The parking standard for higher and further education is for 1 space per 5 staff plus 1 per 3 number students. It is argued that, whilst the

provision for staff would be applicable in this case, the provision for pupils is in excess of requirements, with the majority of SEMH students requiring transport to the school. It would be expected that high numbers of pupils would be travelling to school by school minibus or school taxi in keeping with the pattern established among other, similar schools. Cycle parking for 4 bicycles will be provided, in line with the 1 per 5 staff figure, with 20 number staff being expected to work at the facility.

Motorcycle Parking

5.10. No separate dedicated motorcycle parking has been provided.

Servicing Arrangements

5.11. The proposed site access via Barrack Street can accommodate a standard refuse vehicle to enter and exit the site in forward gear safely. This is an existing movement in the carriageway.

6.0 Trip Rates & Traffic Generation

- 6.1. In order to predict the traffic generation for the proposed development, the Trip Rate Information Computer System (TRICS – Ref. 2), has been examined for the category of 'Education – Primary Schools'. This was chosen as the nearest representation to the SEMH category. Sites with a population within 1 mile of 5000 to 50,000 and a 5 mile population of 50,000 to 500,000 have been selected. The resulting TRICS output is included in **Appendix 4** and summarised below in **Table 2**. **Table 3** shows the resultant trip generation for the proposed development.

Table 2 Traffic Generation Rates (per 100 sq.m Floorspace)

Time Period	Traffic Generation Rate (Arrivals)	Traffic Generation Rate (Departures)	Total Traffic Generation Rate
Weekday A.M. Peak (0800 – 0900 hrs) All Vehicles	4.055	3.467	7.522
Weekday P.M. Peak (1700 – 1800 hrs) All Vehicles	0.158	0.385	0.543
Weekday (0700 – 1900 hrs.) All Vehicles	10.613	10.566	21.179

Table 3 Traffic Generation (540 sq.m Floorspace)

Time Period	Vehicles In	Vehicles Out	Total
Weekday A.M. Peak (0800 – 0900 hrs) All Vehicles	22	19	41
Weekday P.M. Peak (1700 – 1800 hrs) All Vehicles	1	2	3
Weekday (0700 – 1900 hrs.) All Vehicles	57	57	114

*Discrepancy due to rounding.

- 6.2. It can be seen from Table 8 that the proposed development is predicted to generate up to 41 vehicle movements during each of the weekday peak hours and 114 vehicle movements during a typical weekday (7 a.m. – 7 p.m.). Due to the situation of the site, it is likely that these 40 trips will equally distributed between the Barrack Street junction and the Lower Moss Lane access.

Traffic Distribution

- 6.3. The development will be accessed from the wider highway network via Lower Moss Lane / A56 Chester Road and Barrack Street / A56 Chester Road Junctions.
- 6.4. In terms of vehicle movements to, and from the site by car, it is expected that 1/2 of the vehicles would access the site via Lower Moss Lane / A56 Chester Road with the rest of movement being via Barrack Street / A56 Chester Road. Therefore it would be likely

Proposed School, Cornbrook Enterprise Centre, M15 4HW
Transport Assessment

that 20 of the total morning visits would be via Lower Moss Lane / A56 Chester Road Junction with 20 being via Barrack Street / A56 Chester Road.

- 6.5. It is expected that the vehicle movements in the weekday morning peak will be divided as follows:

A56 to Barrack Street (right turn)	Barrack Street to A56 (left turn)	Total through junction	A56 to Lower Moss Lane (left turn)	Lower Moss Lane to A56 (right turn)	Total through junction
11	9	20	11	10	21

- 6.6. Therefore it is expected that the impact on either junctions to the A56 would be less than 20 vehicles in either weekday peak hour.
- 6.7. It would therefore be expected that an extra 21 vehicles would pass through the Lower Moss Lane / A56 Chester Road Junction and 20 vehicles would pass through the Barrack Street / A56 Chester Road Junction at either of the weekday peak periods.
- 6.8. Overall, the increase resulting from the site form a traffic increase of a maximum of 41 vehicle trips in AM peak hour, or one vehicle per 90 seconds. It is considered that this level of traffic increase would be highly unlikely to cause operational or safety issues on the network., which is currently operating within its capacity.

7.0 SUMMARY AND CONCLUSIONS

- 7.1. This Transport Assessment has been produced to support the full planning application for a proposed School comprising 540 sq m of floor space in Manchester, M15 4HW. It includes details on access, parking and traffic impacts at local study area junctions as agreed with the highways officers of TfGM.
- 7.2. The TA shows that the existing highway network in the vicinity of the proposed development site operates satisfactorily and has a, relatively, good road safety record with no evidence of any significant highway safety problems that would be materially affected by the traffic that will be generated by the proposed development.
- 7.3. The TA shows that the proposed development will generate up to 40 vehicular trips during the weekday peak period. As Lower Moss Lane, Quenby Street and Barrack Street have a very low level of traffic at the weekday peaks, this is unlikely to affect the operation of the junctions of Barrack Street / A56 Chester Road and Lower Moss Lane / A56 Chester Road negatively. Traffic distribution indicates that less than 30 vehicular movements will take place through these junctions at the peak periods, therefore the wider highway network which will continue to operate satisfactorily.
- 7.4. The proposed development will be served from the current access from Barrack Street.
- 7.5. The proposed development will be located close to the existing bus service that operates along the A56 Chester Road to allow trips by public transport between the proposed development, the Trafford Centre, Partington, Picadilly Gardens and stops in between.
- 7.6. The proposed development will also be well located for pedestrian access to the existing shops and amenities in Hulme, including those located on Quenby Street.
- 7.7. Therefore, the proposed development will be accessible by sustainable transport and meets the requirements of the National Planning Policy Framework (NPPF), in this regard.

Compiled from data for the period Thu 06-Nov-2025 to Wed 12-Nov-2025. Times not in bold are estimated by using the distance between the stops.

Appendix 4 – TRICS outputs

Audit Code: 3fc302e4-92b0-4d0e-bbd9-825f53f734d4

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use: 04 - EDUCATION

Category: A - PRIMARY

Selected Vehicle Type: Total Vehicles

Selected regions and areas:

02	SOUTH EAST		
	HC	HAMPSHIRE	1 day
	HF	HERTFORDSHIRE	1 day
	ON	LUTON	1 day
03	SOUTH WEST		
	CW	CORNWALL	1 day
	GS	GLOUCESTERSHIRE	1 day
04	EAST ANGLIA		
	CA	CAMBRIDGESHIRE	1 day
	NF	NORFOLK	1 day
05	EAST MIDLANDS		
	NM	WEST NORTHAMPTONSHIRE	1 day
06	WEST MIDLANDS		
	WK	WARWICKSHIRE	1 day
	WM	WEST MIDLANDS	1 day
09	NORTH		
	CU	CUMBERLAND	1 day
	TV	TEES VALLEY	3 days
	TW	TYNE & WEAR	1 day
10	WALES		
	CF	CARDIFF	1 day
11	SCOTLAND		
	EB	CITY OF EDINBURGH	1 day

This section displays the number of survey days per TRICS® sub-region in the selected set.

Audit Code: 3fc302e4-92b0-4d0e-bbd9-825f53f734d4

Primary Filtering Selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter:	GFA
Actual Range:	310 to 9000 (units:sqm)
Range Selected by User:	310 to 9000 (units:sqm)
Parking Spaces Range:	0 - 161

Public Transport Provision:

Selection by:	All Surveys Included
Date Range:	01/01/16 to 19/06/24

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Friday	3 days
Monday	3 days
Thursday	4 days
Tuesday	4 days
Wednesday	3 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	17
Direction ATC Count	0

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines

Selected Locations:

Edge of Town	6 days
Neighbourhood Centre	3 days
Suburban Area	8 days

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

No Sub Category	1 days
Residential Zone	15 days
Village	1 days

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Inclusion of Servicing Vehicle Counts:

Servicing vehicles Excluded	6 days
Servicing vehicles Included	11 days

Audit Code: 3fc302e4-92b0-4d0e-bbd9-825f53f734d4

Secondary Filtering Selection:

Use Class:

F1(a)	17 surveys
-------	------------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order (England) 2020 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

136 - 8587

Population within 1 mile:

10,001 to 15,000	2 surveys
15,001 to 20,000	4 surveys
20,001 to 25,000	3 surveys
25,001 to 50,000	5 surveys
5,001 to 10,000	3 surveys

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

100,001 to 125,000	3 surveys
125,001 to 250,000	7 surveys
250,001 to 500,000	6 surveys
50,001 to 75,000	1 surveys

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	10 surveys
1.1 to 1.5	7 surveys

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Audit Code: 3fc302e4-92b0-4d0e-bbd9-825f53f734d4

Petrol filling station:

This data displays the number of surveys within the selected set that include petrol filling station activity, and the number of surveys that do not.

Travel Plan:

No	16 surveys
Yes	1 surveys

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	17 surveys
-----------------	------------

This data displays the number of surveys within the selected set that include petrol filling station activity, and the number of surveys that do not.

COVID-19 Restrictions:

No

Parameter Summary:

Trip rate parameter range selected:	310 - 9000 (units: sqm)
Survey date date range:	24/03/2016 - 20/06/2024
Number of weekdays (Monday-Friday):	17
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

23:00-00:00					
Total Rates:			10.613	10.566	21.179

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.
