Waste Storage, Ventilation, and Hygiene Plan - 122 Water St, Manchester M3 4JJ

1. Waste Segregation and Storage

- 8 clearly labelled bins will be provided:
  - 2 x non-recyclable/general waste
  - 1 x mixed glass
  - 3 x dry mixed recycling
  - 2 x Food waste
- Bins will be located in two dedicated internal areas, separate from food preparation and customer spaces.
- The storage areas and bin sizes will be sufficient to accommodate twice-weekly collections without overflow.
- 8 x 240L wheeled bins (dimensions w580 x d740 x h1100mm) will be housed in the waste storage areas for this purpose.

2. Ventilation Measures

- The premises will be fitted with mechanical extract ventilation to maintain airflow and prevent odour build-up.
- General ventilation and the extraction system will ensure waste odours do not migrate into food preparation or public areas.
- Food waste bins will be sealed with tight-fitting lids to further control odours.

3. Cleaning and Hygiene Procedures

- Floors and walls of the storage area are constructed of washable, durable materials.
- The areas will be cleaned daily, with bins disinfected after each collection.
- Pest-proofing measures will be implemented to prevent infestation.
- Staff will receive training in safe handling, segregation, and cleaning procedures.

4. Collection and Compliance

- Waste will be collected twice weekly by a licensed private contractor holding a Waste Carriers Licence.
- The business will ensure its frontage and immediate surroundings remain free of litter at all times.
- The waste collection point will be located next to the entrance gate on Woolam Place. Woollam Place is a residential access road just off the main road, Liverpool Road. The road is of a standard size, approximately 4.8–5.0 m wide.
- This width is sufficient for a refuse collection vehicle (RCV) to enter and exit.
- The junction at Water Street provides additional width of 2-3 metres. There is a turning circle of approximately 28-30m and it is therefore wide enough for an RCV to turn in with good visibility.
- Both Woolam Place and Water St. are flat, evenly tarmacked roads.

- There is a drag distance of approximately 20m from Arch 122 to the bin collection point. This is along Water St. which is flat and even. All bins are wheeled and of a manageable size and weight for this.
- Waste collection point and route map are attached.
