Main Customer Entrance

Approximate area of Basement undercroft to be enclosed to form new storage facility.

1.0 Introduction

1.1 Preface

This Heritage Statement has been prepared by Taylor Design Architects Ltd on behalf of Manchester Central as a supporting document to accompany an application for listed building consent.

Manchester Central Convention Centre has operated for many years as a successful conference business and the venue has been established as a national destination. The success of the business has established a security for this heritage asset after its previous use as a train station ended and the building lay vacant and dilapidated for over a decade.

The purpose of the report is to assess the impact of a proposal to enclose part of the basement undercroft to form a secure storage area for temporary seating.

This Statement seeks to demonstrate that the proposal will not have a detrimental effect on the venue's grade II* status and heritage value.

2.0 Purpose

The purpose of this report is to accompany an application for listed building consent for a proposal to enclose part of the basement undercroft to create a secure storage area for temporary seating and staging.

Under the National Planning Policy Framework, this report recognises the requirements of the Local Planning Authorities to account for:

- The desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation.
- The wider social, cultural, economic and environmental benefit that conservation of the historic environment can bring.
- The desirability of new development making a positive contribution to local character and distinctiveness and
- Opportunities to draw on the contribution made by the historic environment to the character of a place.

This report will review the proposal in connection with the historical asset of the Manchester Central listed building and its context; detailed information on the proposals can be found in the design and access statement and drawings comprising the planning application.

3.0 Historical Background

In the late 1800s, Manchester was served by two mainline railway stations, Hunt's Bank (now Victoria Station) and Store Street (now Piccadilly Station). There was demand for a third passenger station and so the Cheshire Lines Committee, a joint venture between the three railway companies at the time, took responsibility for building a third station in Manchester.

The new railway station (Central Station) was built between 1875 and 1880, officially opening on 1 July 1880. The station structure comprises a series of wrought iron arches with red brick facades and was designed by Cheshire Lines engineer Lewis Henry Moorsom, overseen by Sir John Fowler (1817-1898) the chief engineer of the Manchester, Sheffield & Lincolnshire railways company (MS&L).

The main train hall is rectangular in plan and is constructed over an undercroft consisting of two floors of interconnected brick arch vaults which were used for storage. The arched wrought iron truss of the main station building spans 210 feet (64m) and is 90 feet (27m) high at the apex. The structures were built by Andrew Handyside and Co.

The station's entrance faced Windmill Street and a two-storey building was erected to the arched facade comprising ticket offices, waiting rooms and shops. The building facade presented advertising boards and the iconic station clock.

This facade building was originally a temporary construction and was to be replaced by a hotel and ancillary station facilities, which were to be similar to London's St Pancras station. However, the temporary building remained.

View to front façade with link to Midland Hotel, (Image Manchester Libraries)

3.0 Historical Background (Continued)

To the front of the station there was a concourse and covered link towards the Midland Hotel located on the opposite side of Windmill Street. The Midland hotel was designed by Charles Trubshaw in 1898. The concourse at the time was fully enclosed by walls and fences and was adorned with various billboard advertising.

Its use as one of Manchester's main railway stations continued until its closure in 1969. The Beeching report of 1963 "The Reshaping of British Railways" led to the restructuring of most of the railway network. Manchester Central Station was deemed surplus to requirements and in the same year, 18th December 1963, the station achieved listed building status. The station finally closed to passengers on Monday 5th May 1969.

G-MEX Exhibition Centre in Manchester. 17th November 1987. (Image Mirrorpix)

3.0 Historical Background (Continued)

Expected plans for the re-use of the building during this time did not materialise and the building began to fall into disrepair, being used as a car park for many years. In 1978, Greater Manchester County Council purchased the building and plans were announced to develop the station into an exhibition centre. In 1982, and with the building now in poor condition, work started in converting the former railway station into an exhibition centre for Manchester, eventually opening as GMex in 1986.

The GMex refurbishment cleared the ancillary buildings from around the rectangular train shed and created a new level floor within the station building. New extensions provided new front foyer accommodation. The extensions were constructed of steel frame and featured translucent black patent glazing to the sloping roof and the facade walls. These extensions wrapped around the north-east and west sides of the building. The glazed arch at each end of the building was infilled with new glazing.

Manchester International Conference Centre MICC by Stephenson Bell 2001 .
(Image Stephenson Bell)

3.0 Historical Background (Continued)

Where the brick offices were demolished on the north-east and north-west corners of the shed, the exterior face was rebuilt in brickwork to match the original, with some of the detailing executed in GRP to replicate moulded stonework. A new public plaza was created which set the building entrance at a level above street level, and with steps to the front entrance.

GMex was opened in March 1986 by HM Queen Elizabeth II , and the design attracted several design and industry awards including a Civic Trust Award in 1987. The re-furbishment work was one of the first major regeneration projects of its kind and was designed by Architect Jack Bogle of Manchester firm EGS.

In 2001, the Manchester International Convention Centre (MICC) was built adjacent to GMex and added separate, but associated facilities to the complex.

During 2005, the company running GMex and MICC was bought by Manchester City Council and in January 2007 the venue was rebranded as “Manchester Central”, evoking the memory of the former Central railway station. Under Manchester City Council, control plans were developed for the updating and refurbishment of the convention centre facilities. The works to the Manchester Central building were undertaken in 2009 by the Manchester practice Stephenson Bell Architects and constructed by Laing O’Rourke. The alterations included significant demolitions of the 1980s additions, whilst leaving intact the historical fabric of the train shed. The project was seen as a consolidation project, not only updating the ageing fabric of the 1980s extension, but also linking the facilities of the historical train shed with the 2001 MICC building, thereby combining these buildings into the Manchester Central Convention Complex.

Views of front façade Stephenson Bell extension and MICC (Image Manchester Central)

Views of front façade Stephenson Bell extension (Image Manchester Central)

3.0 Historical Background (Continued)

The design of these later additions visually connect the two buildings, replicating the design aesthetic of the 2001 MICC - horizontal facade glazing with red sandstone features. The low pitch of the new extension allowed for greater visibility of the arched glazed façade to Windmill Street .

The Stephenson Bell additions feature a large projecting entrance canopy located above the entrance steps and which is central to the building facade.

This façade remains visible today.

4.0 Context

The former train shed at Manchester Central is one of the finest examples of railway engineering and design in Britain and for this reason was listed in 1963 and is Grade II* listed. However, we also need to acknowledge the historic context and setting. Of the building. The Midland hotel is also a Grade II* listed building and faces towards the Manchester Central entrance across Windmill Street.

Manchester Central is not within a recognized conservation area, but it is adjacent to St Peter's Square and the Deansgate conservation area.

The open forecourt space to the north of the building provides an important setting for both Manchester Central and the Midland Hotel. This area has been remodeled on two occasions since the railway station closed and most recently as part of the 2001 works to build the MCCC building. The setting of these buildings has been significantly altered in the past 30 years – historically, the station was approached across a sloping forecourt defined by perimeter walls and gateways. This space was used for transport drop-off but is now a two-level open space with retaining walls, steps and ramps separating the podium to the Manchester Central entrance from the lower public plaza below.

The service area to the south of the building is important in terms of functionality, and currently operates as a car park and service area.

5.0 Planning Guidance

5.1 National Planning Policy Framework 2024

Section 16

Conserving and enhancing the historic environment

207. *In determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation.*

This Heritage statement incorporates a brief description of the historical asset and its history.

The proposals for a secure storage area within the basement undercroft will include new walls, vehicular and personnel doors, the provision of an access ramp, and a new floor slab which is constructed so as to be fully reversible; thereby minimising any detriment to the existing cobbled floor finish.

It should also be noted that the new wall constructions will be in brickwork to match previous 1980's infills in size, texture, and bond.

208. *Local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage assets conservation and any aspect of the proposal.*

It is our belief that the proposals have been considered in the full context of the former Manchester Central train hall.

We consider that the main train hall is of primary importance to the listed asset. As such, with the current proposals, the proposed alteration works are at a lower floor level of the building and away from public view.

It is considered that the proposed works will not create any conflict with the conservation of the main building and will not affect the exterior of the building. The existing brick vaulted ceilings/roof to the undercroft are seen as the main feature and character of this area and will remain undisturbed and undamaged. Please refer to the accompanying Design & Access statement.

210. *In determining applications, local planning authorities should take account of:*

- a) *the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation;*
- b) *the positive contribution that conservation of heritage assets can make to sustainable communities including their economic vitality; and*
- c) *the desirability of new development making a positive contribution to local character and distinctiveness.*

It is our belief that the proposal is consistent with the ongoing conservation of Manchester Central and also maintains the positive contribution that the building already makes to the city.

The provision of the new storage area will enhance the functionality of the building for its operatives. The new area will be principally used to store temporary seating and sundry fittings which will be required for major events to be held in the main convention hall. This will contribute to the viability of the venue and the continued use of this historic asset.

Recent developments at the rear of the Manchester Central site have impacted upon the storage capacity of the venue. The proposed works will go some way to addressing that impact.

5.0 Planning Guidance (Continued)

5.1 National Planning Policy Framework 2024

Section 16

Conserving and enhancing the historic environment

212. *When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the assets conservation (and the more important the asset, the greater the weight should be). This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance.*

It is our belief that the proposal will result in no harm to the heritage asset. The works, are considered negligible in nature and do not alter the asset aesthetically or materially.

The primary aspect of the heritage asset is the former train hall. The proposed works are sited in the basement undercroft, in an area currently used for parking. The position and aesthetic value of the former train hall is unaffected by these works.

We consider that the heritage asset will remain of major significance nationally, and it is our view that these proposal will have no adverse effect on either the conservation of the asset or its significance.

213. *Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification. Substantial harm to or loss of:*

- a) *grade II listed buildings, or grade II registered parks or gardens, should be exceptional;*
- b) *b) assets of the highest significance, notably scheduled monuments, protected wreck sites, registered battlefields, grade I and II* listed buildings, grade I and II* registered parks and gardens, and World Heritage Sites, should be wholly exceptional⁷⁵.*

It is our belief that no harm or loss to the heritage asset will result from the proposed works.

The proposed alteration works to the undercroft call for new wall constructions to form the proposed storage area, and these have been carefully considered to minimise any harm or loss to the asset.

215. *Where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use.*

It is our belief that the proposed new constructions have been carefully considered to minimise any harm to the existing historic structure.

The works are part of ongoing improvements to the events facility to ensure its ongoing success and increasing economic viability.

Current view of the main hall (Image Manchester Central)

6.0 Summary

Manchester Central was built between 1875 - 80 and operated as a train station until 1969. Since its closure as a station, the building has undergone two major alteration and extension projects and now continues to operate as a successful conference and exhibition centre. The building hosts major events, notably both Conservative and Labour Party political conferences, as well as large-scale concert and trade shows.

Every year, thousands of visitors attend functions at the venue, continuous investment in both maintenance and enhancement of the Grade II* listed building and its performance are fundamental to the heritage asset's protection and conservation.

This proposal will serve to improve the facilities and capability of the building and constitutes a step forward in strengthening the functionality and ensuring the future of this historic asset.

The building is of significance nationally and is iconic in representing the city of Manchester

Within the context of the National Planning Policy Framework, we believe that the proposed works will not have a detrimental effect on the listed building and they will contribute to the conservation of the heritage asset.

7.0 Heritage Asset Listing

7.1 Overview

Heritage Category: Listed Building

Grade: II*

List Entry Number: 1270514

Date first listed: 18-Dec-1963

Date of most recent amendment: 06-Jun-1994

Statutory Address: G MEX, WINDMILL STREET

7.2 Map

The map attached shows the entry on 05.06.23

7.3 Location

Statutory Address: G MEX, WINDMILL STREET

The building or site itself may lie within the boundary of more than one authority.

District: Manchester (Metropolitan Authority)

National Grid Reference: SJ 83737 97786
