Trina Solar (Schweiz) AG declares that the reflectance rates in the range of 380~1100nm of Trina Solar Vertex N modules (TSM-NEG19RC.20, TSM-NEG20C.20 and TSM-NEG21C.20) have been tested at different incident angles by CPVT with the following results:

Trina Solar Vertex N modules (TSM-NEG19RC.20, TSM-NEG20C.20 and TSM-NEG21C.20) use a 2mm anti reflective coating glass, specifically designed for photovoltaic modules that generate significantly lower reflectance compared to conventional glass. According to the results obtained in the test conducted by CPVT, Trina Solar states that the test samples of Vertex N modules maintain an average reflectance value below 5% when the angle of incidence is less than 60°.
