This document has been prepared by Sutcliffe Investigations within the terms of the Contract with the Client to whom this document is addressed. Sutcliffe Investigations disclaims any responsibility to the Client and others in respect of matters outside the scope of the said contract. No person other than the Client or agreed assignees shall rely on it in any respect and Sutcliffe Investigations shall owe no duty of care to any such third party.

Executive Summary

INTRODUCTION	Sutcliffe Investigations were instructed by Mosscare St Vincent's Housing Group to undertake a Phase I Preliminary Risk Assessment (PRA) of the site known as Cheetham Hill, Manchester, M8 0TJ.
AIMS & OBJECTIVES	The Phase 1 PRA is required to assess the ground based environmental and geotechnical risks, development constraints and liabilities associated with the development of the site, required in support of an application for outline planning. This report constitutes a preliminary investigation as defined in BS10175 and contains the following: • Summary of the information obtained from an Envirocheck Report (Report Reference: 324056629_2_1), which is presented in Appendix A. • A preliminary risk assessment of potential environmental risks associated with the proposed redevelopment of the site to identified receptors, following the methodology of LCRM and their recommendations on contamination reports.
DEVELOPMENT PLANS	The proposed development for the site is for 45No. houses and 24No. apartment units with gardens and associated car parking facilities. The proposed development is presented as Drawing Ref.: 21-026-BSA-0001 Rev J, produced by Bowker Sadler Architecture and dated May 2021.
SITE LOCATION & DESCRIPTION	The site address is located at Alderford Parade, Cheetham Hill, Manchester, M8 0TJ and centred at National Grid Reference (NGR) 384030, 400690. The site is split into two zones, both are irregular in shape, 1.3ha in total area with Alderford Parade to the north of the site as well as Dinnington Drive and Heatherdale Drive both to the south of the site. The site's borders are largely lined by a combination of wooden posts, metal fencing and stone boulders. The site is covered by grass with multiple tarmacked and concrete slab footpaths running across the site as well as the occasional tree dotted throughout.
SITE HISTORY	**Onsite** The earliest available historical map (1848) shows the site to be located within field land and segmented by fencing and possible shrubbery. By 1890 terraced houses and roads are noted in the western section of the site and partially in the eastern section of the site, and by 1908 the entire site is occupied by terraced houses as well as several roads. In the 1949 – 1952 mapping, a Clothing Factory is noted to encroach onto the northern boundary of the site. By 1975 it appears that the terraced houses have been knocked down and new buildings have been erected across the site in their place. The map dated between 1978 and 1984 shows a pub, possibly with a cellar, is noted in the north-western tip of the site. By 1992 a few buildings in the western section of the site are no longer mapped. The aerial photography dated 2000 shows that all the buildings noted on-site are no longer mapped, with grass, several trees and footpaths now cover the site. No further significant changes or features are noted on-site from the available historical mappings. **Offsite** The earliest historical map dated 1848 shows the site to be surrounded by field land and ponds. Ponds are noted 40m south-east, 65m east, 65m north, 75m north, 80m west and 180m east of the site. Buildings including a school and places of worship are noted 250m north-east and beyond. With the exception of progressive development commercial/residential/industrial), from 1890 onwards, no significant identifiable changes were apparent in the immediate and wider surroundings.

GEOTECHNICAL UNCERTAINTY	The site has been subject to previous development and therefore, the potential for relic foundations and obstructions cannot be discounted.
GEOLOGY	**Artificial** There are no records of any artificial ground on-site however there are three records of artificial ground within 250m of the site, the nearest of which is 96m south of the site and is noted as Made Ground. **Drift** The superficial drift deposits for the site are noted as Devensian Till (Clay-dominated strata with horizons of sand, gravel and cobbles. Glaciofluvial Sheet Deposits are mapped 27m north-east of the site. **Solid** The solid geology for the site is noted as Chester Formation (Sandstone).
HYDROGEOLOGY	The superficial deposits is classified as a Secondary A / Undifferentiated Aquifer with the bedrock classified as a Principal Aquifer. No groundwater abstractions have been identified within 500m of the site.
FAULTS	There are no faults on-site or within 500m of the site.
RADON	According to the Envirocheck Report, the site is in a Lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level). No radon protection measures are necessary in the construction of new dwellings or extensions.
COAL MINING	The site is within a coal mining area. No further action is required to assess the risks associated with coal mining assets.
DETAILED UXO ASSESSMENT	A Detailed Unexploded Ordnance (UXO) Threat & Risk Assessment was conducted by 6 Alpha Associates Ltd (*Report Ref.: 10910*, dated November 2023), the following is of note from the report: - ARP records identified 39No. high explosive (HE) bomb strikes within 1000m, with the closest five recorded between 100m north-west and 205m south of the site. - Official bomb damage mapping identified “damaged buildings” located 175m south-west of the site and “demolished buildings” located 250m south-west of the site. - Given that bombing and bomb damage were recorded within a close proximity to the site, it is possible that UXO might be encountered. The site was rated as **Medium Risk**, which requires further action to reduce risk to ALARP (As Low As Reasonably Practicable) during intrusive activities. The following risk mitigation measures to reduce risk to ‘ALARP’ are recommended: - Operational UXO Emergency Response Plan; - UXO Safety & Awareness Briefings; - An On-Call Explosive Ordnance Disposal (EOD) Engineer
HYDROLOGY	There are no surface water features within 500m of the site. No surface abstractions have been identified within 500m of the site.
RISK ASSESSMENT	The Phase I PRA has highlighted significant areas of concern and therefore, the site is deemed to be Class 2 – Medium Risk.

CONCLUSIONS & RECOMMENDATIONS	Based on the findings of the Phase I review, Sutcliffe Investigations do consider there to be potential for significant environmental issues regarding the site. However, there is limited information of the ground for geotechnical properties and as such we would therefore recommend the following sequential works are undertaken: - Submission of this Phase I PRA Report for the benefit of validating the outline planning application. - Commission a Phase II Ground Investigation designed to discharge any contaminated land conditions that may be assigned to the site and allow the design of economic foundation solutions. - Further action as outlined within the Detailed Unexploded Ordnance (UXO) Threat & Risk Assessment (*Project Ref: 10910*). - Commission a Flood Risk Assessment.

NOTE: The executive summary is an overview of the key findings and conclusions of the report. There may be other information contained in the body of the main report which puts into context the information presented within the executive summary. No reliance should be placed on the executive summary.

1 Introduction

1.1 Terms of Reference

Sutcliffe Investigations were instructed by Mosscare St Vincent's Housing Group to undertake a Phase I Preliminary Risk Assessment (PRA) of the site known as Cheetham Hill, Manchester, M8 0TJ.

1.2 Development Proposal & Legislative Context

Development Proposal

The proposed development for the site is for 45No. houses and 24No. apartment units with gardens and associated car parking facilities. The proposed development is presented as *Drawing Ref.: 21-026-BSA-0001 Rev J*, produced by Bowker Sadler Architecture and dated May 2021.

Legislative Context

The presence of contaminants which may pose a risk to human health and / or the environment is a planning consideration. As part of the planning regime, it needs to be considered whether the site is "suitable for its proposed end use". Planning is concerned with the site's proposed end use, not its current use, where the amount of contamination is required to be low relative to the level of risk.

Section 57 of the Environment Act 1995 adds Part 2A (ss. 78A to 18YC) to the Environmental Protection Act 1990 and contains the legislative framework for identifying and dealing with contaminated land. Where development is undertaken on land which may be affected by contamination, the National Planning Policy Framework, paragraph 120 to 122 considers pollution and remediation. This links the contaminated land regime within the development process.

For there to be a significant risk requiring further investigation a perceived source (contaminant), a receptor (humans, living organisms or property) and a pathway between them must all be present, resulting in a complete contaminant linkage.

In order to assess whether this is the case, background research is required to obtain relevant information about the site and its surroundings and to assess the findings qualitatively. The scope of the assessment examined whether there is the potential for current and historic soil and/or groundwater contamination to be present, both at and in the vicinity of the site, and to assess significance in terms of the potential to pose a risk to human health, controlled waters, building infrastructure and the wider environment and identify any associated potential liabilities.

Part 2A of the Environmental Protection Act 1990 ("Part 2A") provides the legislative framework for the contaminated land regime in England, Wales and Scotland. It provides for contaminated land to be identified and dealt with in a risk-based manner. The Contaminated Land (England) Regulations 2006 (SI 2006/1380) set out provisions for procedural matters under Part 2A. The 2006 regulations have recently been modified with the introduction of The Contaminated Land (England) (Amendment) Regulations 2012,

which came into force on 6th April 2012. This includes an amendment to Regulation 3(c) to take account of the updated definition of "controlled waters" in Section 78A(9) of the Environmental Protection Act 1990. Section 78A(2) of Part 2A of the EPA 1990 defines contaminated land as "land which appears to the local authority in whose area it is situated to be in such a condition, by reason of substances in, on or under the land, that:

- significant harm is being caused or there is a significant possibility of such harm being caused; or
- pollution of controlled waters is being or is likely to be caused.

Contaminated Land Statutory Guidance published in April 2012 provides for a new four category test which is intended to clarify when land does or does not need to be remediated, where Category 1 is deemed as being high risk and Category 4 as being low risk.

1.3 Previous Studies

A Phase I PRA report has previously been completed on the north-western section of the site, adjacent to Alderford Parade to the north, by Curtins in May 2021. The report reference is *077873-CUR-00-XX-RP-GE-023.*

Sutcliffe are not aware of any other previous environmental or geotechnical investigations having been completed on site.

1.4 Objectives & Scope of Assessment

The Phase 1 PRA is required to assess the ground based environmental and geotechnical risks, development constraints and liabilities associated with the development of the site, required in support of an application for outline planning.

This report will inform the study of any potential contaminated land issues to be identified, assessed and actioned and has been designed to provide sufficient information to satisfy the requirements of National Planning Policy Framework (NPPF) in order to satisfy the aims and objectives of the project.

The report will culminate in the presentation of a Preliminary Conceptual Site Model (CSM) and will include clear robust recommendations for any additional works. These works will be designed to fully assess and mitigate risks, development constraints and abnormals that may be required in support of a detailed planning application and design of detailed foundation options.

This report constitutes a preliminary investigation as defined in BS10175 and contains the following:

- Summary of the information obtained from an Envirocheck Report (Report Ref.: 324056629_2_1), which is presented in Appendix A.
- A preliminary risk assessment of potential environmental risks associated with the proposed redevelopment of the site to identified receptors, following the methodology of Land contamination risk management (LCRM) and their recommendations on contamination reports.

- Recommendations for further investigation/actions if required.

The scope of works was to undertake a Phase I PRA using available information, and to place the site in its environmental context and has included the following:

- A review of available historic maps to determine the land-use history in the context of potentially contaminative activities;
- A review of environmental data relating to the site and its surroundings using a proprietary third-party environmental database;
- Desk-based assessment of site geology, hydrogeology and hydrology from published mapping and web-based sources to determine the site's environmental setting and sensitivity;
- A web-based search of the Environment Agency (EA) website and other freely available sources of information to identify any potential issues relating to the site and surrounding areas; and
- Provision of a qualitative contaminated land risk assessment based on Source-Pathway-Receptor as per current best practice contained in LCRM.

A site inspection was undertaken by a Sutcliffe engineer – Michael Wiggins, on the 16th November 2023. No sampling or testing of soils or waters will be undertaken as part of this environmental review. All other information in this report has been obtained via public sources.

2 Environmental Review

2.1 Introduction

The information presented within this chapter was compiled based on a site inspection, completed by a suitably qualified Sutcliffe Engineer, and a review of an Envirocheck Report (Report Reference: 324056629_2_1), presented in Appendix A.

2.2 Site Location & Setting

The site address is located at Alderford Parade, Cheetham Hill, Manchester, M8 0TJ and centred at National Grid Reference (NGR) 384030, 400690. Location plans of varying scales are presented as *Figures 1 & 2* and an Aerial Photograph is presented as *Figure 3*.

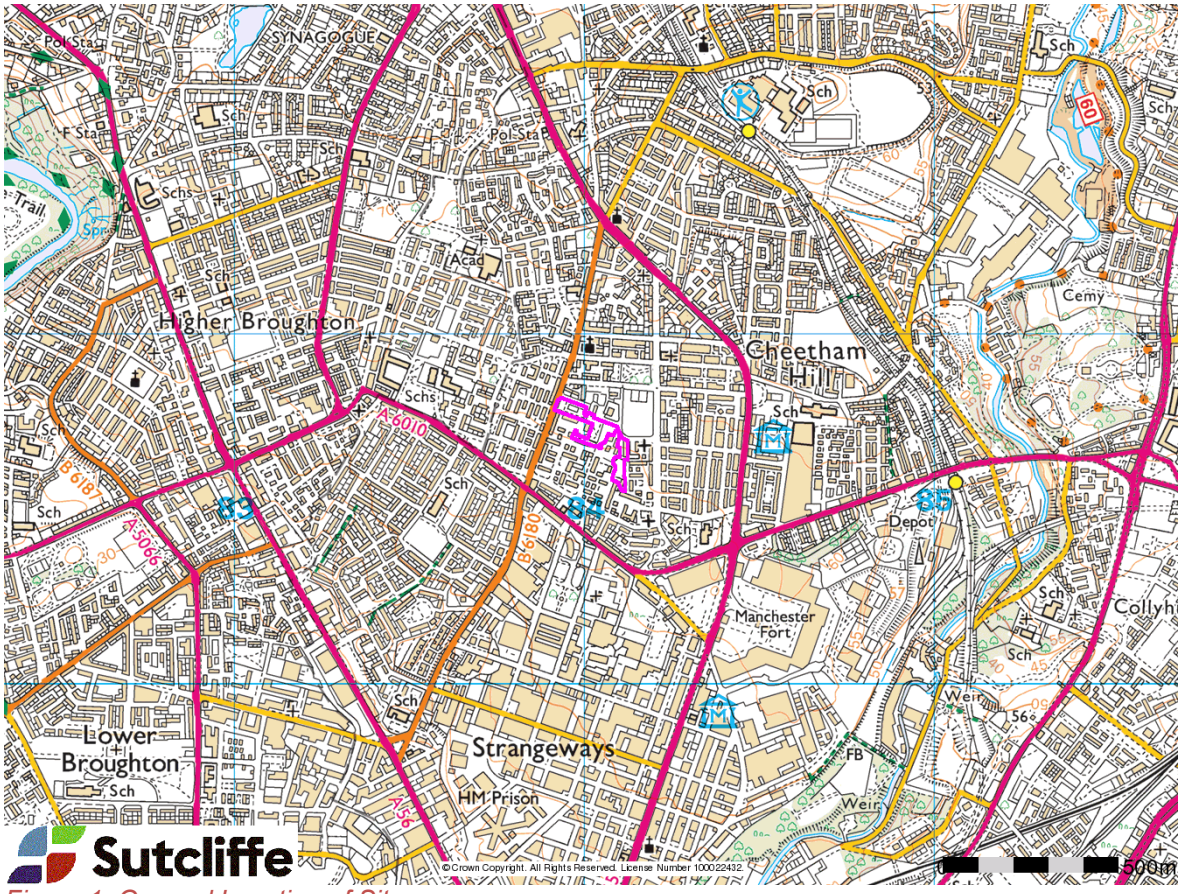

Figure 1: General Location of Site

2.3 Site Description & Walkover

The site is split into two zones, both are irregular in shape, 1.3ha in total area with Alderford Parade to the north of the site as well as Dinnington Drive and Heatherdale Drive both to the south of the site. The site's borders are largely lined by either wooden posts, metal fencing or stone boulders, therefore vehicular access to each part of the site will need to be taken into consideration before any site investigation works occur. The site is covered by grass with multiple tarmacked and concrete slab footpaths running across the site as well as the occasional tree dotted throughout. A photographic log of the site is presented as Appendix B.

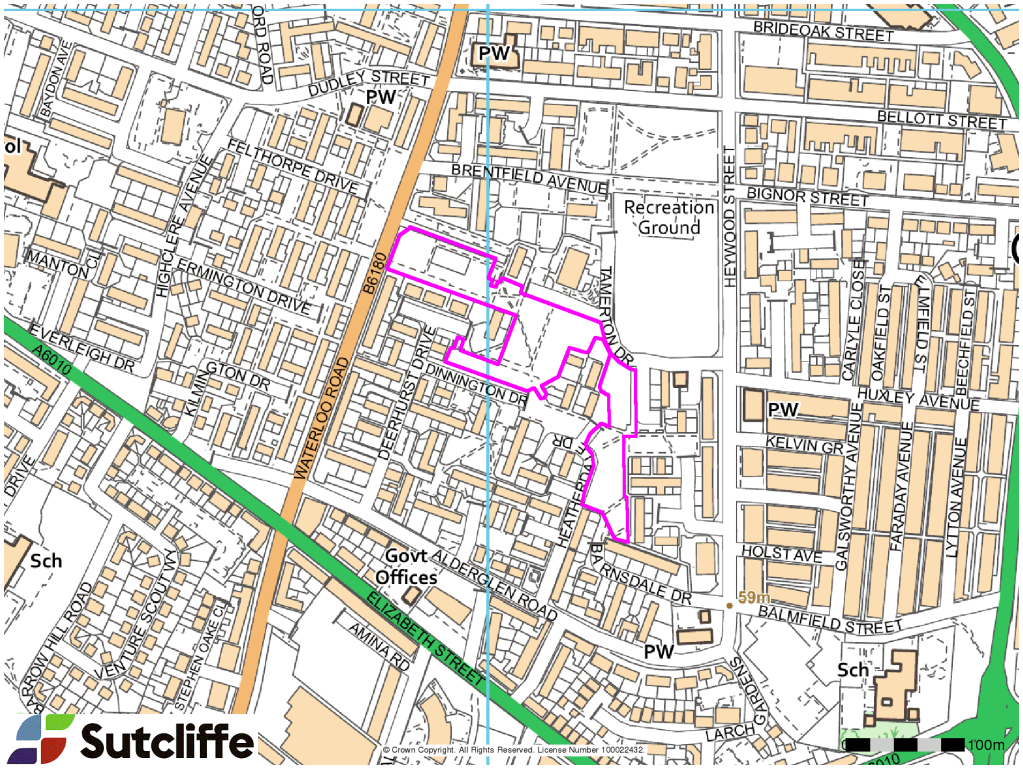

Figure 2: General Site Layout

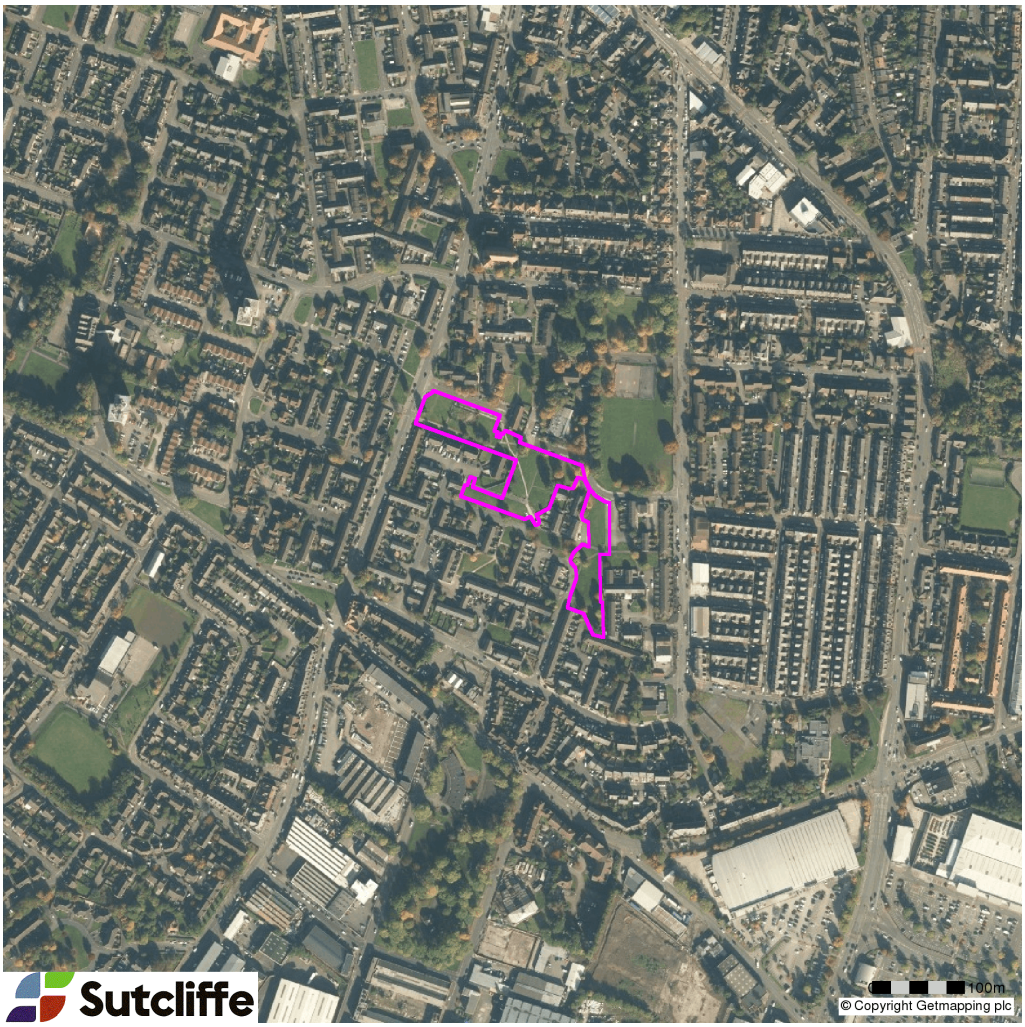

Figure 3: Aerial Photograph

2.4 Adjacent Land Uses

Table 2.1 summarises the adjacent land uses.

Table 2.1: Adjacent Land Uses

Direction	Adjacent Land Use
North	Residential
East	Residential
South	Residential
West	Residential

2.5 Services

Underground Pipelines and Transmission Assets

A search of the Linesearch database was undertaken on 13th November 2023. This database lists pipelines owned and/or operated by over 40No. pipeline and transmission operators, but not all operators are registered.

According to the database, there are two underground pipelines or transmission assets on the site or within a 50m search radius.

Service plans are presented in Appendix C.

Electric

Low voltage electricity cables are scattered throughout the site. An electricity substation noted immediately north of the site, connected to it are low voltage cables as well as a 6-6.6kV electricity cable cutting through the site's north-western section.

Gas

Low pressure gas mains are noted throughout the site and along the site's borders.

Drainage

According to the UU Water Mains Records map, there are multiple water mains on-site and running adjacent to the site. Abandoned water mains are also noted in the southern section of the site.

According to the UU Sewer Records map, a combined sewer main is noted crossing the southern section of the site. Combined sewer mains are also noted to border multiple parts of the site.

BT

Multiple BT boxes and associated BT cables are scattered throughout the site.

2.6 Site History

Historical maps were obtained and reviewed by Sutcliffe Investigations to determine the historical development of the target site. These are presented in Appendix A. This enabled an assessment to be made of the potential for contamination associated with former activities, both on-site and in the surrounding areas.

Onsite

The earliest available historical map (1848) shows the site to be located within field land and segmented by fencing and possible shrubbery. By 1890 terraced houses and roads are noted in the western section of the site and partially in the eastern section of the site, and by 1908 the entire site is occupied by terraced houses as well as several roads. In the 1949 – 1952 mapping, a Clothing Factory is noted to encroach onto the northern boundary of the site.

By 1975 it appears that the terraced houses have been knocked down and new buildings have been erected across the site in their place. The map dated between 1978 and 1984 shows a pub, possibly with a cellar, is noted in the north-western tip of the site. By 1992 a few buildings in the western section of the site are no longer mapped. The aerial photography dated 2000 shows that all the buildings noted on-site are no longer mapped, with grass, several trees and footpaths now cover the site. No further significant changes or features are noted on-site from the available historical mappings.

A detailed review of the historical development of the site is presented in Appendix D.

Offsite

The earliest historical map dated 1848 shows the site to be surrounded by field land and ponds. Ponds are noted 40m south-east, 65m east, 65m north, 75m north, 80m west and 180m east of the site. Buildings including a school and places of worship are noted 250m north-east and beyond.

By 1890 all the ponds noted previously, apart from the one noted 180m east of the site, are no longer mapped. Terraced houses are noted immediately west and south of the site, and partially north of the site. A reservoir is noted 40m east of the site. An area of Brick Works with multiple reservoirs is noted 260m south-west of the site.

By 1908 terraced houses now completely surround the site in all directions. The pond noted 180m east and the reservoir noted 40m east of the site are no longer mapped. Brickfields associated with Brick Works are noted 195m south-west, 210m south and 380m south-east of the site.

By 1923 further residential expansion is noted 115m east of the site and by 1931 the brickfield noted 210m south of the site is no longer mapped. The 1949 – 1952 mapping shows a Raincoat Factory and Textile Works are noted 20m south and 90m east of the site. By 1975 the terraced houses that surrounded the site are also no longer mapped and have been replaced by new buildings.

By 1978 – 1984 an electricity substation is noted immediately north of the site. Apart from slight changes to the footprints of surrounding buildings, no further significant changes of features are noted off-site from the available historical mappings.

A detailed review of the historical development of the surrounding land uses is presented in Appendix D.

2.7 Environmental Database

A commercial database search (provided by Envirocheck) was obtained to provide further information regarding the site and the surroundings. Relevant information and records are summarised below:

Contaminated Land Entries

The database has no contaminated land entries within 500m of the site.

Environmental Permitted Activities

According to the database there are no current Local Authority Integrated Pollution Prevention and Controls within 500m of the site.

There are 3No. Local Authority Pollution Prevention and Controls within 500m of the site, the details of which are presented hereunder:

Table 2.2: Environmental Permitted Activities

Distance / Direction (<500m)	Name	Description	Status
331m SW	Trust Motors Manchester	PG6/34 Respraying of road vehicles	Authorisation revoked
448m NE	Shirley Filling Station	PG1/14 Petrol filling station	Authorisation
483m SW	Horners Ltd	PG6/34 Respraying of road vehicles	Authorisation revoked

Hazardous Substances Sites

According to the database there are no Control of Major Accident Hazards (COMAH) registered sites, no Planning Hazardous Substances Consents and no records of Notification of Installations Handling Hazardous Substances (NIHHS) sites within 500m of the site.

Substantiated Pollution Incident Register

According to the database there are no Substantiated Pollution Incidents within 500m of the site.

Landfill Sites

According to the Envirocheck Report there are;

- No Registered Landfill sites within 500m of the site.
- 3No. Historic Landfill sites have been noted within 500m of the site, the nearest being 223m south-west of the site with commercial and household waste type.
- No BGS Recorded Landfill sites within 500m of the site.
- No Local Authority Recorded Landfill sites within 500m of the site.

Infilled Land

There are 11No. records of Potentially Infilled Land (Non-Water) within 500m of the site, with 3No. recorded within 250m, the details of which are provided hereunder:

Table 2.3: Infilled Land (Non-Water)

Distance / Direction (<250m)	Use	Year
176m S	Unknown Filled Ground (Pit, quarry etc)	1986
177m S	Unknown Filled Ground (Pit, quarry etc)	1986
238m SW	Unknown Filled Ground (Pit, quarry etc)	1986

There are 11No. records of Potentially Infilled Land (Water) within 500m of the site, with 6No. recorded within 250m, the details of which are provided hereunder:

Table 2.4: Infilled Land (Water)

Distance / Direction (<250m)	Use	Year
52m SE	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
75m N	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
79m N	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
93m W	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
174m NW	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
202m NW	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848

Waste Management Facilities

The database has recorded 1No. Registered Waste Transfer Sites within 500m of the site, the details of which are provided below. There are no Registered Waste Treatment or Disposal Sites and no Licensed Waste Management Facilities within 500m of the site.

Table 2.5: Registered Waste Transfer Sites

Distance / Direction (500m)	Licence Holder	Authority	Authorised Waste	Licence Status
197m SW	Primechase	Environment Agency - North West Region, South Area	Construction Ind.S, Ind. Non-Haz. Inert, Non Flammable, Ind. Non-Haz. Potentially Combustible & Old Cars/Trailers Etc	Licence Lapsed

Radioactive Materials

According to the Envirocheck Report, there are no authorisations for radioactive substances within 500m of the site.

Fuel Stations

According to the database, there are 2No. petrol or fuel station entries within 500m of the site, the details of which are presented hereunder:

Table 2.6: Fuel Stations

Distance / Direction (<500m)	Name	Status
367m NE	Express Service Station	Obsolete
448m NE	Shirley Service Station	Open

Contemporary Industrial Land Uses

According to the database, there are 51No. entries located within 500m of the site, with 9No. located within 250m of the site, the details of which are presented hereunder:

Table 2.7: Contemporary Industrial Land Uses

Distance / Direction (<250m)	Name	Classification	Status
67m S	24 Hour Recovery	Disability Equipment - Manufacturers & Suppliers	Inactive
86m S	Manchester Plumbers	Boilers - Servicing, Replacements & Repairs	Active
109m SE	Liberty Computers	Computer Manufacturers	Inactive
127m SE	Pro Cleaners Cheetham	Cleaning Services - Domestic	Inactive
142m S	D T M Motors	Garage Services	Inactive
142m S	D T M	Garage Services	Inactive
142m S	D T M	Garage Services	Inactive
205m N	Adam Heating & Plumbing Ltd	Boilers - Servicing, Replacements & Repairs	Inactive
243m SW	The Capital Textile	Textile Manufacturing	Inactive

2.8 Historical Contamination Potential

Site

Historical maps have indicated that terraced houses, roads and part of a clothing factory were noted on-site from at least 1890 to 1975 when they were demolished and replaced by residential buildings and a pub. By 1992 some of the buildings are no longer mapped and by 2000 all the buildings including the pub are no longer mapped.

Made Ground associated with the demolished buildings is anticipated below ground level across the site. Significant thicknesses of Made Ground, associated with a possible infilled cellar, are potentially present in the north-western tip of the site where the pub was situated. As historic roads were once on-site, past hydrocarbon leakages from parked cars may have occurred.

An electricity substation is located immediately off-site but PCB contamination could be a present on-site which would be a human health risk to future site users.

Consequently, the potential for significant contamination to have arisen at the site as a result of demolished buildings and hydrocarbon leakages is considered likely.

Surrounding Area

Demolished residential and industrial buildings are also noted surrounding the site and therefore the associated Made Ground may be an active source of leachate and gas generation. Future site users are very unlikely to come into direct contact with potentially contaminated ground located off-site.

Therefore, the potential for off-site sources of contamination to impact the site is considered low.

Detailed Unexploded Ordnance (UXO) Threat & Risk Assessment

A Detailed Unexploded Ordnance (UXO) Threat & Risk Assessment was conducted by 6 Alpha Associates Ltd (*Project Ref.: 10910*, dated November 2023), the findings of which can be summarised below:

- Luftwaffe aerial photography did not identify any primary bombing targets within 1000m of the site.
- ARP records identified 39No. high explosive (HE) bomb strikes within 1000m, with the closest five recorded between 100m north-west and 205m south of the site.
- Official bomb damage mapping identified “damaged buildings” located 175m south-west of the site and “demolished buildings” located 250m south-west of the site.
- No British military activity has been recorded within 1000m of the site.
- No records of ordnance being manufactured and/or stored are noted within 1000m of the site.
- Given that bombing and bomb damage were recorded within a close proximity to the site, it is possible that UXO might be encountered.

The most probable UXO threat items are German HE bombs, whilst Incendiary Bombs (IBs) and British Anti-Aircraft Ammunition (AAA) projectiles pose a residual threat. The consequences of initiating German high explosive (HE) bombs are more severe than initiating IBs or AAA projectiles, and thus they pose the greatest prospective risk to intrusive works.

The site was rated as **Medium Risk**, which requires further action to reduce risk to ALARP (As Low As Reasonably Practicable) during intrusive activities.

The following risk mitigation measures to reduce risk to 'ALARP' are recommended:

- Operational UXO Emergency Response Plan;
- UXO Safety & Awareness Briefings;
- An On-Call Explosive Ordnance Disposal (EOD) Engineer

The full Detailed UXO Threat and Risk Assessment report is provided in Appendix F.

3 Environmental Setting

3.1 Introduction

Desk-based research of the local geology, hydrogeology, hydrology and ecology was carried out in order to establish the potential for migration of contamination onto or away from the site, and to assess the surface water and groundwater sensitivity of the surrounding area. Information was obtained from a number of sources, namely:

- Inspection of the British Geological Survey (BGS) GeoIndex Onshore Viewer;
- Inspection of the MAGIC interactive map service;
- A review of online web-based information searches;
- A review of previous site investigation reports pertaining to the site; and,
- A review of publicly available information.

3.2 Soils Chemistry

The environmental database also presents an estimation of the rural background soil chemistry within the site area.

Table 3.1: Soil Chemistry

Contaminant	Concentration (mg/kg)
Arsenic	15 – 25
Cadmium	<1.8
Chromium	60 – 90
Lead	200 – 300
Nickel	30 – 45

Reference to the data presented suggests that the majority of metals concentrations, apart from Lead, are generally anticipated to be below current Tier 1 Assessment Criteria in relation to human health effects.

3.3 Geology

According to the BGS GeoIndex Onshore Viewer and the relevant British Geological Survey (BGS) Solid and Drift Sheets 085 Manchester (2010) at a scale of 1:50,000 the following geological succession has been identified (Appendix A).

Artificial Ground

There are no records of any artificial ground on-site however there are three records of artificial ground within 250m of the site, the nearest of which is 96m south of the site and is noted as Made Ground.

Superficial Geology

The superficial drift deposits for the site are noted as Devensian Till (Clay-dominated strata with horizons of sand, gravel and cobbles. Glaciofluvial Sheet Deposits are mapped 27m north-east of the site.

Solid Geology

The solid geology for the site is noted as Chester Formation (Sandstone).

Table 3.2: Geology Summary

Strata	Description	Soil / Rock Type
Artificial Ground	No records on-site	N/a
Drift	Devensian Till	Clay with sand, gravel and cobbles
Solid	Chester Formation	Sandstone

Faults

There are no faults on-site or within 500m of the site.

British Geological Society (BGS) Mineral Sites

There are 3No. BGS Recorded Mineral Sites within 500m of the site, the nearest of which is 353m south-west, refers to Water Lane Brickworks and the commodity was common clay and shale. All three Mineral Sites have since ceased.

Ground Stability

Table 3.3 below summarises the natural hazards information presented in the Envirocheck Report.

Table 3.3: Potential Natural Hazards

Natural Hazard	Hazard Potential
Shrink - Swell Clays	Very Low
Landslides	Very Low
Soluble Rocks	No Hazard
Compressible Deposits	No Hazard
Collapsible Deposits	Very Low
Running Sands	Very Low

3.4 Coal Mining & Brine Subsidence

The site does fall within a coal mining area. Based on the Consultants Coal Mining Report (*Report Reference: 51003388325001)* the following is of note:

- No Past Underground Mining is noted below site.
- No Probable Unrecorded Shallow Workings are recorded.
- No Spine Roadways are recorded at shallow depth.
- There are no known coal mining entries on or within 50m of the site.
- No Abandoned Mine Catalogue Numbers are noted intersecting with the site boundary.
- No Outcrops are recorded onsite.
- No Opencast mines are recorded within 500m of the site boundary.
- No records of Coal Mining subsidence within 50m of the site boundary.
- There is no record of mine gas emissions recorded within 500m of the site boundary.

The potential risks to the development of the site from historic coal workings and remediation to these features as identified within the Coal Authority Report are summarised below in *Table 3.4*.

Table 3.4: Potential Coal Mining Issues

Coal Mining Issues	Yes	No	Risk Assessment
Underground coal mining (recorded at shallow depths)		✓	Not required
Underground coal mining (probable at shallow depths)		✓	Not required
Mine Entries (shafts and adits)		✓	Not required
Coal mining geology (fissures)		✓	Not required
Record of past mine gas emissions		✓	Not required
Recorded coal mining surface hazard		✓	Not required
Surface mining (opencast workings)		✓	Not required

A full copy of the Coal Authority Mining Repot can be found in Appendix E.

3.5 Radon

According to the Envirocheck Report, the site is in a Lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level). No radon protection measures are necessary in the construction of new dwellings or extensions.

3.6 Hydrogeology

Groundwater protection policy uses aquifer designations that are consistent with the Water Framework Directive.

These designations reflect the importance of aquifers not only in terms of groundwater as a resource (drinking water supply) but also their role in supporting surface water flows and wetland ecosystems.

Types of aquifer designations are presented in *Table 3.5*, with the designations assigned to the underlying strata of the site in *Table 3.6* hereunder:

Table 3.5: Aquifer Designations

Designation	Description
Principal Aquifer	Layers of rock or drift deposits that have high intergranular and / or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and / or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifer.
Secondary A Aquifer	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formally classified as minor aquifers.
Secondary B Aquifer	Predominantly lower permeability layers which may store and yield limited amounts of groundwater due to localised features such as fissures, thin permeable horizons and weathering. These are generally the water-bearing parts of the former non-aquifers.
Secondary (Undifferentiated) Aquifer	Cases where it has not been possible to attribute either category A or B to a rock type. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type.
Unproductive Aquifer	Rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow.

Table 3.6: Hydrogeology Summary

Strata	Description	Soil / Rock Type	Designation
Superficial	Till, Devensian	Clay with sand, gravel and cobbles	Secondary A Aquifer / Secondary Undifferentiated Aquifer
Bedrock	Chester Formation	Sandstone	Principal Aquifer

The Envirocheck Report indicates that the site is not located within a Groundwater Source Protection Zone (SPZ).

There are no groundwater abstraction points listed in the Envirocheck Report within 500m of the site.

3.7 Hydrology

The following is also of note:

- There are no surface water features within 500m of the site.
- There are 2No. recorded pollution incidents to controlled waters listed in the Envirocheck Report within 500m of the site, the details of which are provided below in *Table 3.7*.
- There are no surface water abstractions listed within the Envirocheck Report within 500m of the site.
- There are no biological or chemical quality records within 500m of the site.

Table 3.7: Recorded Pollution Incidents to Controlled Waters

Distance / Direction (<500m)	Authority	Pollutant	Incident Severity	Incident Date
286m SE	Environment Agency, North West Region	Unknown	Category 3 - Minor Incident	22/08/1995
385m E	Environment Agency, North West Region	Unknown	Category 3 - Minor Incident	20/06/1996

3.8 Flood Risk

According to the Envirocheck Report, the site is not within 250m of an area at risk from extreme flooding from rivers or sea without defences.

According to the Envirocheck Report, the site is at low risk of flooding from surface water.

According to the BGS Flood GFS Data map, the site is situated within an area that has a limited potential for groundwater flooding to occur.

As the site is over 1ha in area, a Flood Risk Assessment (FRA) is required.

3.9 Sensitive Land Uses

Ecological Receptors

According to the database, the site is situated within a Nitrate Sensitive Area. No other Sensitive Land Uses are noted within 1000m of the site.

Significance of Environmental Setting

The significance of the environmental setting is considered by Sutcliffe Investigations to be as follows:

Table 3.8: Environmental Setting Summary

Environmental Setting	Sensitivity	Rationale
Groundwater	Moderate	The site is situated in an area of moderate sensitivity with respect to groundwater resources due to the presence of a Secondary A / Undifferentiated Aquifer and Principal Aquifer beneath the site. However, this sensitivity is reduced by the absence of any abstractions (sensitive or otherwise) within the immediate vicinity of the site.
Surface Water	Unlikely	With respect to surface water resources, the site is considered to be located in a low sensitivity setting.
Flood Risk	Low	A Flood Risk Assessment (FRA) is required as the site larger than 1ha.
Sensitive Land Uses	Low	With respect to sensitive land uses such as protected habitats, protected sites, protected buildings and sensitive receptors, the site is considered to be located in a low sensitive setting.

4 Preliminary Qualitative Risk Assessment

4.1 Preliminary Conceptual Site Model (CSM)

A conceptual model is an essential element of any site-specific environmental risk assessment. In this context, they are often simple representations of the hypothesised relationships between sources, pathways and receptors.

For the purpose of this report, a basic conceptual model has been developed based on the principles of LCRM and interpretation of information gathered during the Phase I review. Thus, this allows the identification of potential contaminant linkages and whether these linkages have the potential to comprise significant harm and/or pollution of controlled waters in relation to the site.

Based on this interpretation, the implications for potential liability associated with soil or water contamination at the site can be evaluated.

- **SOURCES** – the identification of contaminants within the soils and groundwater that represent potential pollution sources;
- **PATHWAYS** – the identification of the potential exposure mechanisms and migration pathways from the potential sources; and
- **RECEPTORS** – the identification of the potential receptors that could be sensitive to harm if exposed to these pollution sources.

Collectively, each of these scenarios would be considered a potential pollutant linkage that may require further assessment.

A preliminary conceptual model is presented below (*Table 4.5*) in accordance with the guidance outlined within LCRM.

4.2 Identification of Potential Sources

Based on the information from the desk study, historical maps, published information, and a site walkover a summary of potential contaminant sources is provided in *Table 4.1*.

Table 4.1: Potential Sources

Ref.	Potential Sources	Potential Contaminants
S1 (On-site)	Demolished houses, pub, works and roads.	All metals, PAHs, petroleum hydrocarbons, oils and localised ground gas.
	Electricity substation	PCBs
	Possible UXO contamination	Ordnance
S2 (Off-Site)	Demolished houses, works and roads.	All metals, PAHs, petroleum hydrocarbons, oils and localised ground gas.

S1 (On-site)

Made Ground associated with demolished buildings is anticipated below site. By its nature, Made Ground can contain a wide range of potentially contaminated material which may also generate leachate. A demolished pub is noted in the north-western tip of the site which may have an infilled cellar, and therefore have a significant of Made Ground.

Although an electricity substation is located off-site, as it borders an area of the site that is proposed to be an area of soft landscaping, the potential for PCB contamination cannot be discounted.

Vehicle use and parking associated with the site's previous use likely occurred. As such, hydrocarbons could have been introduced to the site via leaking of vehicles parked on-site which may pose a risk to human health. A vapour risk may also be present, dependent on the volume of hydrocarbons present. Any such leaks / spills are anticipated to be relatively minor / small in scale.

S2 (Off-site)

Made Ground associated with demolished buildings is anticipated off-site in all directions. However, the thicknesses of the Made Ground are not thought to be significant enough to be an active source of permanent gas generation.

An electricity substation is noted immediately north of the site and could be a source of PCB contamination. Due to the immobile nature of PCBs, any concentrations noted off-site are not envisioned to migrate to site. However, concentrations may be present on-site if initial leakage occurred on-site.

4.3 Potential Exposure Pathways

Exposure pathways are the potential routes and mechanisms by which potential on-site sources could be linked to the identified potential receptors and thereby expose them to potential harm.

The following potential exposure pathways have been identified at the site:

Table 4.2: Potential Exposure Pathways

Ref.	Pathway	Description
P1	Direct contact with potential contaminants.	Dermal absorption, ingestion and inhalation of contaminants via direct contact. Construction workers may come into contact during the site works, however this will be for a short time and therefore limited exposure will occur. PPE can be used and worn as a precaution to reduce the risk.
P2	Ingestion of potential contaminants.	
P3	Inhalation of potential contaminants.	
P4	Leaching and migration of contaminants.	Leaching of possible contaminants could migrate into the underlying Principal Aquifer via shallow groundwater. On site drainage is also at risk from shallow contamination, if present.
P5	Vertical and lateral migration of ground gases / vapours.	There is the potential for contaminants to be present on the site, which could generate ground gas & vapours on site.

P1 – P3 (Direct contact)

Soft landscaping is planned within the proposed development. If Made Ground containing contaminative material is present onsite, human health risks to future site users may be present if such Made Ground is left in situ in the planned soft landscaped areas.

P4 (Leaching & Migration)

Made Ground as previously discussed within section S1 may contain potentially leachable contaminants.

Groundwater on site is anticipated to be perched water as opposed to a water table, and not in hydraulic conductivity with the underlying Bedrock Aquifer due to the anticipated presence of a significant thickness of impermeable Devensian Till. As such downward migration of any potential leachates generated is not envisioned.

Lateral migration of any leachates generated may be possible, percolating rainwater is likely to be peached on top of the impermeable Devensian Till which has the potential to migrate laterally.

P5 (Migration of ground gas / vapours)

Apart from the possible infilled cellar, Made Ground thicknesses are expected to be relatively limited given the development present onsite. As such, it is considered unlikely that a thickness of Made Ground capable of generating significant thickness of permanent gases will be present, and consequently the risks to human health from permanent gases generated on-site is considered to be low.

While the potential for hydrocarbon contamination on site is thought possible, volumes expected are anticipated to be relatively low, and as such are considered unlikely to pose a viable human health risk from any vapours released for future site users.

4.4 Potential Receptors

Based on the site's environmental setting and the proposed future end use of the area following redevelopment, the following potential receptors have been identified:

Table 4.3: Potential Receptors

Ref.	Receptor	Description
R1	Current & future site users	Site users; personnel, general workers and maintenance workers,
R2	Construction Workers	Contractors working on the development of the site. Construction workers, maintenance workers or other personnel who may be directly exposed to contaminated materials in the course of their activities).
R3	Controlled Waters	Principal Aquifer and Secondary A / Undifferentiated Aquifer and on-site drainage.
R4	Adjacent Site Users	Adjacent site users. Third-party land (*i.e.* the possibility of contamination migrating off-site onto third party land *via* contaminated groundwater, surface water run-off).

Ref.	Receptor	Description
R5	Infrastructure / Buried services	Proposed buildings and buried services.

NOTE: ground workers (i.e. If the site were redeveloped, any associated activities may bring site personnel and construction workers into contact with potentially contaminative materials, however, it is considered that the risks to workers will be short term and could be controlled by safe working procedures.

4.5 Potential Contaminant Linkages

In order for there to be a plausible contaminant linkage there must be a source, receptor and pathway and a feasible linkage between them (a contaminant linkage).

Consequently, even where a contaminant is identified, if there is no pathway for the contamination to reach a receptor, or no receptor then there can be no significant risk and remedial actions are not required.

Central to this risk assessment process is the development of a 'conceptual model'. This is a descriptive and/or pictorial representation of the area of potential contamination, the surrounding environment and the processes acting on the contaminants by which they can move and come into contact with receptors (*e.g.* by leaching and migration into groundwater).

Production of a conceptual model requires an assessment of risk to be made. Risk is a combination of the likelihood of an event occurring and the magnitude of its consequences.

Therefore, in order to assess risk both the likelihood and the consequences of an event must be taken into account.

This report adopts the methodology for risk evaluation presented in CIRIA report C552 'Contaminated Land Risk Assessment – A Guide to Good Practice', 2001.

The method is qualitative and involves the classification of the following:

- The magnitude of the potential severity or consequence of the risk occurring (*Table 4.4*);
- The magnitude of the likelihood or probability of the risk occurring (*Table 4.5*);
- Once the likelihood of an event occurring and its severity have been classified, a risk category can be assigned (*Table 4.6*).

Table 4.4: Classification of consequence

Classification	Definition
Severe	Acute risks to human health, catastrophic damage to buildings/property, major pollution of controlled waters.
Medium	Chronic risk to human health, pollution of sensitive controlled waters, significant effects on sensitive ecosystems or species, significant damage to buildings or structures.
Mild	Pollution of non-sensitive waters, minor damage to buildings or structures.
Minor	Requirement for protective equipment during site works to mitigate health effects, damage to non-sensitive ecosystems or species.

Table 4.5: Classification of Probability

Classification	Definition
High Likelihood	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term or there is evidence at the receptor of harm or pollution.
Likely	There is a pollution linkage, and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term
Low Likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place and is less likely in the shorter term.
Unlikely	There is a pollution linkage, but circumstances are such that it is improbable that an event would occur even in the very long term.

Table 4.6: Risk Assessment Matrix

Consequence					
Severe	Medium	Mild	Minor		
Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk	High Likelihood	Probability
High Risk	Moderate Risk	Moderate / Low Risk	Low Risk	Likely	
Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk	Low Likelihood	
Moderate / Low Risk	Low Risk	Very Low Risk	Very Low Risk	Unlikely	
Low Risk	Very Low Risk	Very Low Risk	Very Low Risk	Negligible Likelihood	

Sutcliffe has devised a conceptual model based on the information obtained to date through the desk-based study and future residential usage of the site. This is detailed in tabular format in *Table 4.7* and pictorially in *Figure 4*.

Table 4.7: Preliminary Risk Evaluation of Potential Contaminant Linkages

1. Hazard Identification		2. Hazard Assessment				3. Risk Estimation		4. Risk Evaluation	5. Action required
Contaminant Source		Pathway		Receptor		Consequence	Probability	Classification	
S1	Made Ground / UXO	P1	Direct contact with potential contaminants.	R1/2	Site users	Medium	Likely	Moderate Risk	It is possible that harm could arise to a designated receptor from an identified hazard. Investigation is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
		P2	Ingestion of potential contaminants.	R1/2	Site users	Medium	Likely	Moderate Risk	
		P3	Inhalation of potential contaminants.	R1/2	Site users	Severe	Low	Moderate Risk	
		P4	Leaching and migration of contaminants.	R3/5	Principal Aquifer	Medium	Low	Moderate / Low Risk	
		P5	Vertical and lateral migration of ground gases / vapours.	R1	Site users	Severe	Unlikely	Moderate / Low Risk	
				R4	Property	Severe	Unlikely	Moderate / Low Risk	
S2	Made Ground	P5	Vertical and lateral migration of ground gases / vapours.	R1	Site users	Severe	Unlikely	Moderate / Low Risk	
				R4	Property	Severe	Unlikely	Moderate / Low Risk	

5 Conclusions & Recommendations

5.1 Introduction

Sutcliffe Investigations were instructed Mosscare St Vincent's Housing Group, to provide a Phase I PRA report. The purpose of the report is to generate preliminary environmental assessment data for submission with an outline planning application for redevelopment of the site.

This comprised a review of the Phase I PRA data, collection of environmental information and reports undertaken on the site.

5.2 Environmental Risk Assessment Findings

The site is split into two zones, both are irregular in shape, 1.3ha in total area with Alderford Parade to the north of the site as well as Dinnington Drive and Heatherdale Drive both to the south of the site. The site is covered by grass with multiple tarmacked and concrete slab footpaths running across the site as well as the occasional tree dotted throughout. The site's borders are largely lined by a mixture of wooden posts, metal fencing and stone boulders.

The development history of the site has identified a significant source of environmental concern, and information contained within the environmental database has highlighted any major concerns. The site is underlain by a Secondary A Aquifer/Secondary Undifferentiated Aquifer for the superficial deposits, with a Principal Aquifer for the bedrock.

Taking the above into account, it is considered that there is a low – moderate potential for significant contamination to be present.

5.3 Classification & Land Use Risk

Historical maps initially indicate that off-site the surrounding land comprised fields and ponds. Over time the surrounding land was increasingly built up with residential properties in all surrounding areas of the site.

The classification of risk is as follows:

Table 5.1: Land Use Risk Classification

Class	Description
Class 1	Potential for High levels of contamination and migration of contamination off the site.
Class 2	Potential for Medium levels of contamination and migration of contamination off site.
Class 3	Potential for Low levels of contamination and migration of contamination off site.
Class 4	Potential for limited contamination.

The Phase I PRA has not highlighted significant areas of concern and therefore, the site is deemed to be Class 2 – Medium Risk.

5.4 Geotechnical Uncertainty

The site has been subject to previous development and therefore, the potential for relic foundations and obstructions cannot be discounted. Given the presence of mature trees on-site testing for tree heave would also be recommended.

5.5 Conclusions & Recommendations

Based on the findings of the Phase I PRA review, Sutcliffe Investigations do consider there to be a potential for significant environmental issues regarding the site. However, there is limited information of the ground for geotechnical properties and as such we would therefore recommend the following sequential works are undertaken:

- Submission of this Phase I PRA Report for the benefit of validating the outline planning application.
- Commission a Phase II Ground Investigation designed to discharge any contaminated land conditions that may be assigned to the site and allow the design of economic foundation solutions.
- Further action as outlined within the Detailed Unexploded Ordnance (UXO) Threat & Risk Assessment (*Project Ref.: 10910*).
- Commission a Flood Risk Assessment.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
