1.0 INTRODUCTION

1.1 Objectives

This validation report has been produced on behalf of Bridgestone Construction and relates to the enabling works validation at a site at Didsbury Point which is being redeveloped with a multi-storey residential building up to nine storeys in height, with associated hardsurfacing and soft landscaping on the ground level as shown on the 'Planning Layout' *8845-BA-Z1-GF-DR-A-(04)010-P2.*

The remediation requirements are outlined in the following documents:

- *Clancy Consulting Geo-Environmental Appraisal referenced; 20/0867/001 dated April 2016*
- *Groundtech Consulting Geo-Environmental Appraisal ref. GRO-20064-2216 dated May 2021*
- *Groundtech Consulting Ground Gas Risk Assessment ref. GRO-20064-2788 dated September 2021*
- *Groundtech Consulting Remedial Specification ref. GRO-20064-4035 dated December 2022*

1.2 Proposed Works

The following works were proposed as part of the site remediation:

- *Vegetation clearance and topsoil strip*
- *Break out of all hardsurfacing and below ground obstructions and processing for reuse*
- *Watching brief for asbestos containing materials (ACM)*
- *Removal of stockpile soils*
- *Testing of topsoil*
- *Cut site to required earthworks profile*
- *Placement of piling mat and capping to carriageways*
- *Reuse of appropriate soils and materials management of soils, including topsoil strip*
- *Off-site disposal of unsuitable or excess material*
- *Validation during the enabling works*
- *Maintain watching brief*

1.3 Previous Work

Various desk-based studies and Ground Investigations have been completed at the site as outlined in S*ection 1.1* to assess potential risks to site users and the wider environment based on a residential end use. The reports should be read in conjunction with this document, a summary of the previous reports is outlined in the following Sections.

2.0 SUMMARY OF PREVIOUS WORK

The following information has been summarised from the Clancey Report and Groundtech Consulting Geo-Environmental Appraisal.

2.1 Site Details

The site is located circa 3.54 miles south of Manchester City Centre and is approximately centred on National Grid Reference 383534, 392594.

The topography of the site was generally level and occupied by an area of vegetation with part of the southern area covered in a degraded tarmac surfacing. There was two buildings on site one was associated with an electrical substation and the other was a temporary building owned by the local council and used for the storage of gardening equipment.

The site is generally surrounded by residential properties with some commercial developments and a primary school adjacent.

2.2 Site History and Consultations

The site was located in an area of open undeveloped land until 1922/23 where the hospital located adjacent had expanded onto the eastern side of the site, this was then demolished in 1934. Withington Hospital was developed in the 1970s and occupied most of the east and west areas of the site. This was finally demolished in 2006 where the site remained as undeveloped land.

2.3 Geology and Hydrogeology

The 1:50,000 British Geological Survey (BGS) map for the area (Sheet 98, Stockport) indicates that superficial deposits are present beneath the site comprising a Glaciofluvial Sheet Deposits (sand and gravel) of the Devensian period. Solid strata comprise sandstone of the Triassic Wilmslow Sandstone Formation.

Sub Soil Surveys drilled one cable percussion borehole (BH8) on the site, the results of which show that Made Ground soils of around 4.0m bgl, overlay firm to stiff Clay with occasional sand horizons to depths approaching 22.0m bgl, where very dense Sand grades into weathered sandstone at approximately 23.3m bgl.

According to the Environmental Agency Groundwater Vulnerability Map (Sheet 17 Manchester) the Sandstone bedrock is classified as a Principal Aquifer, and the overlying superficial deposits are a Secondary A Aquifer.

The site is not indicated to be within a Groundwater Source Protection Zone.

There are no recorded groundwater abstraction points or any recorded groundwater pollution incidents within 500m of the site

2.4 Preliminary Conceptual Site Model

The following risks were determined by Clancy Consulting:

Receptor	Level of Risk
Aquifers	*Very Low to Moderate*
Surface Waters	*High*
Site End Users from contaminated soils	*Very Low*

Site End Users from vapours	*Low*
Site End Users from ground gas	*Very Low*

2.5 Scope of Works

The following scope of works was carried out by Clancy Consulting.

- *9 No. Windowless Sample Boreholes (WS1 to WS7A) were advanced to depths of between 0.15m and 4.0m bgl.*

The following scope of works was undertaken by Groundtech Consulting:

- *Five cable percussive boreholes (BH01 to BH05) were advanced to depths of between 5.0m bgl and 27.5m bgl. Rotary coring was followed on for 6.0m within the two deeper cable percussive boreholes (BH01 and BH02) to depths of 33.0m and 28.0m bgl respectively.*
- *Four trial pits (TP02 to TP05) were excavated to depths of between 2.1m and 2.7m bgl.*
- *Two soil percolation tests (TP03 and IP3) were conducted at depths of 1.5m and 0.9m bgl respectively.*
- *Six plate load tests (PLT01 to PLT06) were carried out at depths of 0.35m bgl within the trial pit locations prior to deeper excavation.*
- *Two foundation pits (TP01 and TP06) were excavated to depths of between 0.16m and 0.55m bgl.*

2.6 Ground Model

Clancy Consulting
During the Ground Investigation completed by Clancy Consulting, Made Ground was encountered across the site within all locations to a maximum depth of 4.0m bgl. None of these boreholes succeeded in reaching natural strata. Made Ground was generally granular in nature consisting of slightly silty gravelly fine to coarse sand and gravel of brick, sandstone, concrete with wood fragments, metal, plastic and glass. This was underlain with dark grey medium to coarse sand with occasional fine to medium subrounded gravel of quartzite and sandstone with occasional coal and brick fragments.

Groundtech Consulting
During the Groundtech Consulting Ground Investigation, Made Ground was encountered beneath the entire site to a maximum depth of 3.5m bgl.

Hardstanding consisting of a degraded tarmac was encountered in TP02 from ground level to a maximum depth of 0.2m bgl. Brown sandy gravelly clayey topsoil was present in all locations excluding TP02 and BH04 from ground level to a maximum depth of 0.2m bgl.

Three main Made Ground populations were encountered during the investigation and are described below:

1. *Orange brown sandy cobbly gravel in all trial pit locations from 0.15m bgl to a maximum depth of 0.8m bgl.*

2. *Grey brown cobbly sandy gravel in all trial pit locations excluding TP03 from 0.7m to a maximum depth of 2.1m bgl.*

3. *Brown grey slightly clayey gravelly sand in all borehole locations and TP03 from 0.6m to a maximum depth of 3.5m bgl.*

Former foundations were encountered within TP04 in the northern part of the site. Concrete slabs and bricks were encountered at circa 1.5m bgl and beneath this was plastic and metal piping, presumably the services for the former hospital building.

Three main natural stratification were encountered during the investigation and are described below:

1. *Medium dense to very dense grey brown and orange brown gravelly Sand in BH01, TP02, TP03 and TP05 to a maximum depth of 4.0m bgl.*

2. *Firm to stiff sandy gravelly Clay in BH01 and BH02 from 4.0m to a maximum depth of 19.5m bgl.*

3. *Gravel and sand bands in BH01 and BH02 between depths of 11.0m to 12.0m bgl and 17.0m to 19.2m bgl within BH01 and between depths of 2.0m to 4.0m within BH02.*

Residual bedrock comprising very dense red brown Sand was encountered in BH01 from 22.2m bgl to a maximum depth of 24.4m bgl.

Bedrock was encountered during the investigation from depths of between 23.0m and 24.4m bgl and consisted of an extremely weak red Sandstone.

2.7 Geo-Environmental Testing Results

A summary of the soil testing results is provided below:

Determinant	Samples	Contamination Encountered
Heavy Metals	-	-
Asbestos not detected		
Speciated PAHs	*2 Samples* *2 Samples* *2 Samples*	*Benzo(b)fluoranthene associated with former site usage.* *Benzo(a)pyrene associated with former site usage.* *Dibenzo(ghi)anthracene associated with former site usage.*
No Elevated TPH CWG		
No Elevated VOCs		

Strata	
Made Ground Topsoil	*No Elevated concentrations.*
Hard surfacing/Subbase Material	*No Elevated concentrations*
Made Ground Sand	*Elevated speciated PAH Concentrations.*
Made Ground Gravel	*No Elevated concentrations.*

2.8 Ground Gas

A maximum carbon dioxide concentrations of 3.8%v/v was recorded at the site. No methane concentrations or positive flow rates were recorded. Associated oxygen concentrations of a minimum 9.5% v/v were encountered through the monitoring.

The site has been classified as Characteristic Situation 1 (CS1) based on the GSV assessment, no gas protection measures are required within the proposed developments.

No radon precautions are required at the site.

2.9 Pollution Linkage Assessment Review

The risks identified by the investigation are summarised in the tables below:

Human Health

Receptor	Level of Risk	Comments
Site End Users	*Moderate*	*PAH contamination encountered at the site.*
Site End Users (Asbestos)	*Low*	*No asbestos identified during investigation.*
Site End Users (Vapours)	*Low*	*No sources identified during investigation.*
Site End Users (Ground Gas)	*Low*	*Site falls into CS1, no radon protection measures.*
Adjacent Residents	*Low*	-

Controlled Waters

Receptor	Level of Risk	Comments
Aquifers	*Low*	*Not a resource and no significant contamination recorded.*
River Mersey	*Low*	*No mobile contamination identified.*

Groundworkers

Receptor	Level of Risk	Comments
Contractors	*Moderate to Low*	*During remediation phase from PAHs.*

2.10 Outline Remedial Strategy

Based on the results of the investigation a cover system should be placed in soft landscaped areas to mitigate the risk from contaminated soils on site, elevated concentrations have been observed in two locations (BH2 and BH4) from speciated Polycyclic Aromatic Hydrocarbons. The clean cover layer system should comprise 600mm of clean topsoil material underlain with 100mm of hard dig subsoil material.

The depth and chemical suitability of the cover system should be validated after placement.

Testing of onsite topsoil is recommended to confirm suitability for reuse as part of the proposed development. If soils are to be imported, they should be tested at source and on arrival on site to confirm it is the same material.

No remediation required with respect to groundwater.

Preliminary ground gas results place the site within CS1 and gas protection measures will not be required. This will be confirmed or otherwise on completion of the gas monitoring. Radon protective measures are not required within the proposed development.

Enabling Works Validation Requirements
The most appropriate approaches with respect to contamination at the site are outlined below:

- *Pre Start Site Clearance, Vegetation clearance and topsoil strip.*
- *Break out of all hardsurfacing and below ground obstructions and processing for reuse.*
- *Removal of stockpiled soils located centrally to the site.*

- *Cut site to required earthworks profile.*
- *Placement of piling mat and capping to carriageways.*
- *Reuse of appropriate soils and materials management of soils, including topsoil strip.*
- *Off-site disposal of unsuitable or excess material.*
- *Watching brief during enabling works.*
- *Installation of cover system in soft landscaping areas*

3.0 VALIDATION

3.1 Remediation Objectives

The objective of this document is to verify that the Remedial Specification has been adhered to with respect to the remediation works carried out at the site. This Remedial Validation Report is based on information provided by Bridgestone Construction.

3.2 Pre-Start Site Clearance, Topsoil Strip and Disposal of Stockpiled Material

The pre start site clearance was commenced at the site in May 2024 where all surfacing strata was stripped from the site including topsoil and areas of degraded tarmac.

Site Strip Eastern Area

During the pre start clearance all surfacing soils including existing topsoil and subsoil as well as areas of degraded tarmac was stripped to formation level required for the earthworks profile and this material was exported from site to Whitehead Tip, waste transfer notes for the exported topsoil and subsoil are presented in *Appendix 3.* A total volume of approximately 180m^3 of surfacing soils were exported to tip during the pre start clearance.

Additionally, during the pre start clearance the existing stockpile located centrally to the site was exported to tip as inert material, waste transfer notes for the exported stockpile material are presented in *Appendix 4.* A total volume of circa 100m^3 of stockpile material was exported to tip during the pre start clearance.

Site Strip Northern Area

Site Strip Central Area

During this activity, the existing substation building in the western area of the site was demolished and associated foundations grubbed up, the material generated from this activity was not processed for reuse and was exported from the site to tip under the inert material volumes. Waste transfer notes for this material are presented in *Appendix 4.*

No material was retained at the site during this activity. All topsoil and subsoil, stockpiles and the demolition material associated with the existing substation was disposed of to tip. No material generated from this activity has been reused at the site.

Finally, during this activity the temporary building owned by the council was removed along with any remaining equipment.

3.4 Additional Visual Investigation During Breaking Out and Removal of Below Ground Structures

A watching brief was maintained at the site during the site strip and during the demolition of the substation building in the eastern area of site by Bridgestone Construction.

During this watching brief no evidence of contamination or Asbestos Containing Materials (ACMs) were noted and no further substructures or obstructions were encountered.

3.5 Placement of Piling Mat and Capping to Carriageways

Following the site being cut to formation required for the earthworks profile 124 loads of 6F5 equating to approximately 1500m^3 was imported to the site between May and June 2024 for use in the piling mat and capping layers as per the below images.

6F5 Material Imported

The 6F5 material was imported to the site from Platinum Civil Engineers Limited and transfer notes for the imported 6F5 are presented in *Appendix 5.*

6F5 Material Placed

6F5 Material Placed

Following placement of the imported 6F5 material to the site, pile foundations were installed as shown in the below images.

Piled Foundations being installed

Piled Foundations being installed

3.0 CONCLUSION

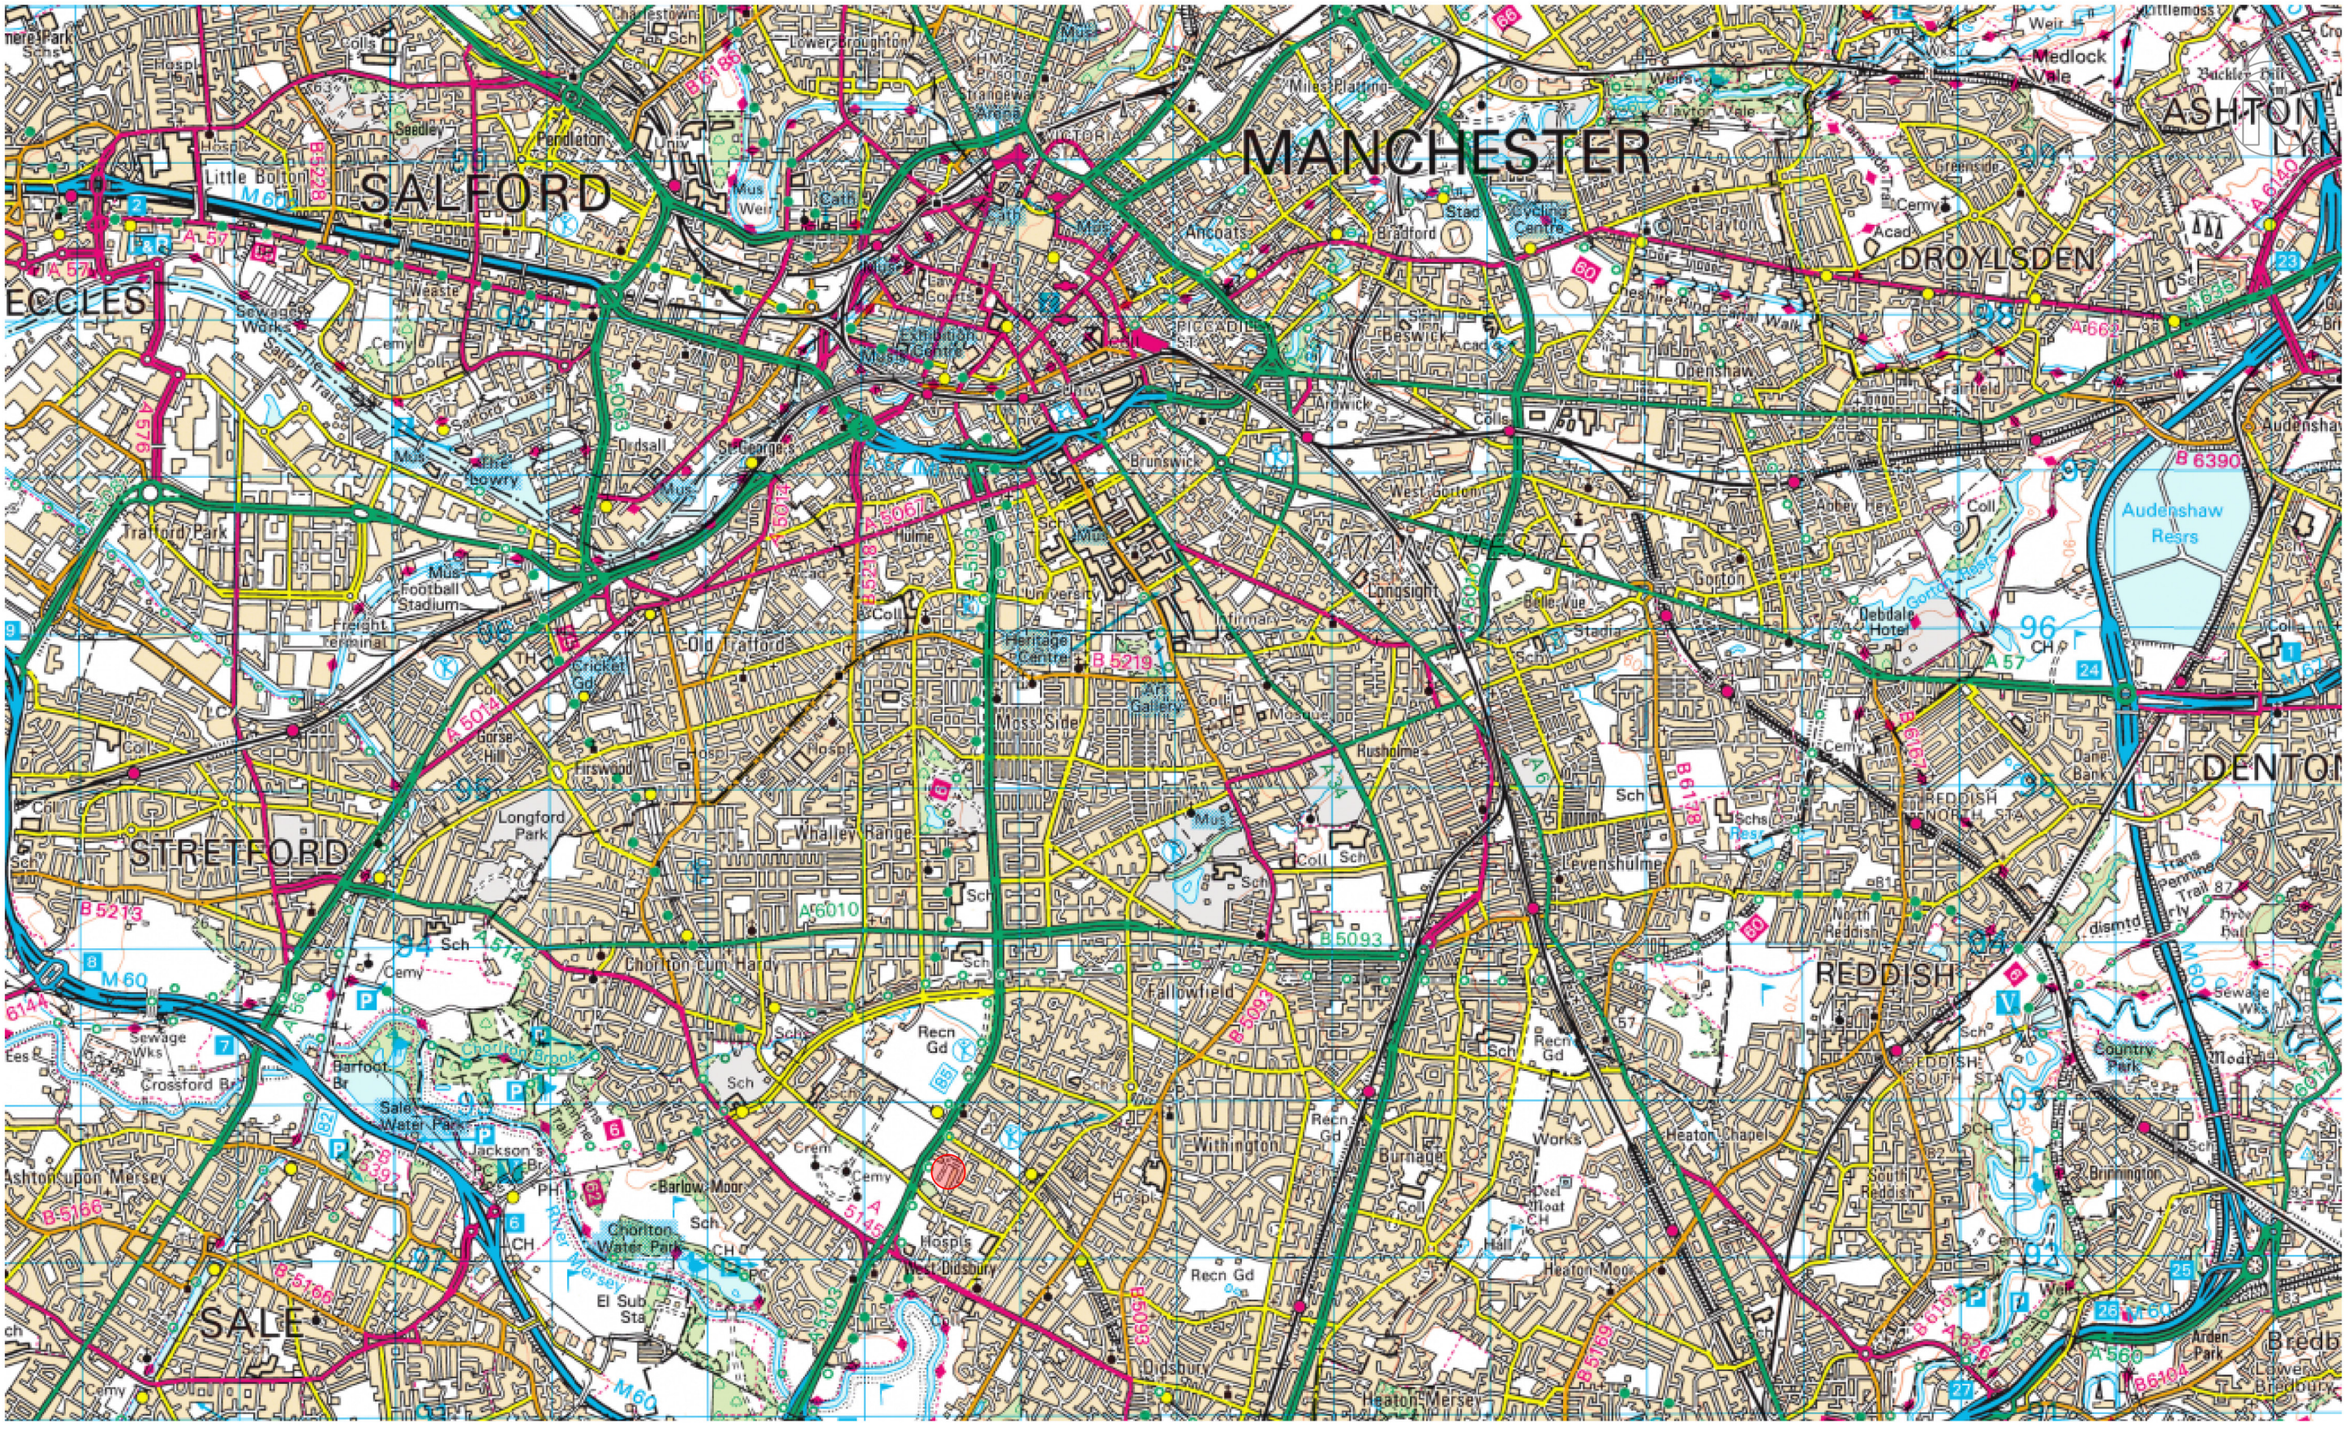

Based on the records provided by Bridgestone Construction, the enabling works undertaken at the site has been undertaken in line with the requirements of the remedial specification, no contaminative sources were identified during the watching brief during the enabling works.

No material has been generated or reused during the enabling works and waste transfer notes have been provided for all materials removed.

Class 6F5 was imported during the enabling works to place as a capping layer and piling mat, transfer notes for the imported materials have been provided.

The cover system validation at the site is still to be undertaken as part of the Construction Phase and will be reported under a separate cover.

APPENDIX 6 - Limitations

Limitations

This report (Report) forms part of the Services and if applicable Additional Services undertaken by Groundtech Consulting Ltd pursuant to a written contract (Agreement) which contains detailed provisions including express limitations of the liability of Groundtech Consulting Ltd.

This Report was prepared using reasonable skill and care as stated in the Agreement for the purpose including intended end use stated by the Client (Purpose) and the liability of Groundtech Consulting Ltd in respect of the form and content of this Report is no greater than its liability under the Agreement. All records, measurements notes, or any other data (Data) obtained by or for the benefit of the Consultant were obtained at a specific point in time and it may not be assumed by the Client or any person relying on this Report that the Data will remain unaffected by the passage of time, the seasons, weather conditions, changes in the water table or the carrying out and completion of works at the Site.

Unless otherwise agreed this Report has been prepared exclusively for the use and reliance of the Client and may not be relied upon, by any other party except as provided for in the Agreement. A third party who relies on this Report, does so at their own and sole risk and Groundtech Consulting Ltd has no liability to such parties.

Groundtech Consulting Ltd that this Report is to be used for the Purpose. The Purpose was instrumental in determining the scope and of the Services provided. If the Purpose should change, the Client may not be able to rely on the Report without the separate agreement of Groundtech Consulting Ltd.

Since the Report was written, later changes in legislation, statutory requirements and industry best practices have not been considered and this should be allowed for. Ground conditions can also change (see below) and should be investigated if there is any significant delay in acting on the findings of this Report. The period of time may result in changes in site conditions, regulatory or other legal provisions, technology or economic conditions which could render the Report inaccurate or unreliable. The information and conclusions in this Report should not be relied upon in the future without written confirmation from Groundtech Consulting Ltd that it is safe to do so.

The observations and conclusions outlined in this Report are based exclusively on the services that were provided as set out in the agreement between the client and Groundtech Consulting Ltd.

Groundtech Consulting Ltd is not liable for the existence of any condition, the discovery of which would require additional investigation outside the agreed scope of works or core competency. The Report is based upon Groundtech Consulting Ltd's observations of existing physical conditions at the Site gained from site reconnaissance together with interpretation of information including documentation, obtained from third parties and from the Client on the history and usage of the Site. The findings and recommendations contained in this Report are based in part upon information provided by third parties, and Groundtech Consulting Ltd have relied upon such information assuming it to be correct.

Groundtech Consulting Ltd accepts no responsibility for errors or inaccuracies in third party information presented in this Report. Groundtech Consulting Ltd was not authorised to independently verify the accuracy or completeness of information, documentation or materials received from the client or third parties, including laboratories and information services, during the performance of the Services or Additional Services. Groundtech Consulting Ltd is not liable for any inaccurate information, misrepresentation of data or conclusions, which may inform the scope of investigation undertaken by Groundtech Consulting Ltd and forms the contract with the client.

Where field investigations have been carried out these have been restricted to a level of detail required to achieve the stated objectives of the work. Ground conditions may also vary due to the ground's heterogeneous properties and because investigation exploratory locations only allow examination of the ground at discrete locations. The potential exists for ground conditions to be encountered which are different to those considered in this Report, particularly between exploratory holes. The extent of the limited area depends on the soil and groundwater conditions, together with other constraints such as the position of any existing structures and underground utilities. If so stipulated in the Agreement, geo-environmental testing was carried out for a limited number of parameters based on an understanding of the available operational and historical information, and it should not be inferred that other chemical species are not present.

Any groundwater conditions entered on the exploratory hole records are those observed at the time of investigation. The groundwater level often has not had time to reach equilibrium and a monitoring period is required. Furthermore, groundwater levels are subject to seasonal variation or changes in local drainage conditions and groundwater levels may occur at other times of the year which are higher than were recorded during this investigation.

Any site drawings provided in this Report are preliminary and used to present the general relative locations of features on, and surrounding, the Site.
