Secure Metal Bike Storage for Up to 4 Bicycles

The Asgard “Access” is a larger-capacity metal bike store designed for households which can store up to four full-size bicycles, along with helmets, locks, and other cycling equipment - keeping them safe, secure, and dry. Constructed from thick, heavy-duty galvanised steel panels with a durable polyester powder-coated finish, the Access is fully weather-resistant, rust-resistant and virtually maintenance-free. The rigid steel structure, reinforced doors and integral metal floor combine to create a strong and secure storage unit designed to protect valuable bicycles and outdoor equipment from both the elements and opportunistic theft. The unit can be securely bolted to the ground using the supplied fixings and features a pick-and drill-resistant 3-point locking system with an internal deadbolt for added security.

Practical Design for Everyday Use

The Access features large, heavy-duty double doors that can be installed with either a left-hand or right-hand opening during assembly, providing wide and convenient access when storing or removing bicycles. A gas-assisted lift-up lid also allows quick access from above, making it easier to manoeuvre bikes and equipment inside the unit. Inside the unit, pre-drilled panels allow for the easy fitting of optional Asgard accessories, including shelves, hooks, and eyelets, helping to maximise the efficiency of your storage space. Up to two shelves can be fitted (sold separately) without compromising the unit's bike storage space. A concealed roof ventilation system allows air to circulate through the unit, helping reduce moisture and condensation and ensuring your bikes and cycling equipment remain dry and well protected. For a clean internal finish, there are no exposed edges inside the unit and all screw heads are concealed from view.

Colours, Accessories & Installation

The Access is available in a choice of three colours: green, ivory or grey, allowing the unit to complement a variety of garden and outdoor settings. A range of optional accessories is available, including half-width and full-width shelving (two shelves can be fitted inside whilst maintaining space for 4 bikes), along with universal hooks and eyelets designed to maximise your internal storage space. The panels are pre-drilled to allow easy installation of these accessories. Please note: accessories and internal components shown in product images may be optional extras and are not included in the base price. The Access bike store includes a full installation pack with illustrated step-by-step instructions for straightforward self-assembly. A professional installation service is also available as an optional extra.

Installation & Base Requirements

A firm, level surface is required before installation can take place, such as concrete, tarmac or paving slabs with a minimum thickness of 50mm (2"). The base must be solid and completely flat to ensure the unit sits securely and the doors operate correctly. For the Access bike store, the recommended base size is: 2200mm (7’2”) in width x 1150mm (3’9”) in depth x 50mm in height.

Ideal For

The Asgard Access bike store is ideal for families storing up to 4 bicycles, protecting expensive road or mountain bikes, homes without garage storage, patios, driveways or garden spaces and storing cycling accessories such as helmets and locks.

Dimensions

Weight	114kg (18 stones)
Height at front	1140mm (3'8")
Height at rear	1340mm (4'4")
Width	1984mm (6'5")

Width including lid overhang	2060mm (6’8”)
Depth	950mm (3’1”)
Lid depth	1043mm (3’4”)
Door aperture	1350mm (4’5”)
