

Open Style Platform Lift

Description

Open Style Platform Lifts (sometimes referred to as Steplifts) are a cost-effective and aesthetically pleasing solution for transporting wheelchair users, people with mobility issues or parents with pushchairs between two levels in a safe and easy way.

Capable of raising up to 3 metres and lifting 385kg, the UnaPorte lift from Ascendor offers the benefits of a conventional Platform Lift (no pit or lift shaft required) but with the feeling of freedom that comes with an open aspect design.

Available in a brushed stainless steel finish or RAL colour of your choice, our Open Style Vertical Platform Lifts will blend in with the environment, whether workplace or at home, office or retail. And, by adding a thermally insulated door, it is possible to gain access to your building even when the platform lift is situated outdoors

What are the benefits of an open platform lift?

An open platform lift provides a simple solution to overcoming architectural barriers, such as steps, which can prevent wheelchair access in domestic, commercial or public buildings.

This type of platform lift requires little or no alterations for existing buildings – saving time, effort and money.

Want to create disability access in a stylish way? With an open-style low-rise platform lift, you can! Disability access can usually be achieved with minimal building work or fixings needed.

Suitable for both indoor and outdoor use, our vertical platform lift will help you to comply with the Equality Act 2010 – ensuring nobody is discriminated against or turned away at the entrance.

By working with an experienced platform lift company like Level Access Lifts, you can also trust that your new platform lift will be fully operational without taking up too much floor...
