This document has been prepared by Sutcliffe Investigations within the terms of the Contract with the Client to whom this document is addressed. Sutcliffe Investigations disclaims any responsibility to the Client and others in respect of matters outside the scope of the said contract. No person other than the Client or agreed assignees shall rely on it in any respect and Sutcliffe Investigations shall owe no duty of care to any such third party.

Executive Summary

INTRODUCTION	Sutcliffe Investigations were instructed by Jigsaw Homes to undertake a Phase I Preliminary Risk Assessment (PRA) of the site known as Oldham Road, Miles Platting, Manchester M40 8RR.
AIMS & OBJECTIVES	The Phase 1 PRA is required to assess the ground based environmental and geotechnical risks, development constraints and liabilities associated with the development of the site, required in support of an application for outline planning. This report constitutes a preliminary investigation as defined in BS10175 and contains the following: • Summary of the information obtained from an Envirocheck Report (Report Reference: 382261253-1-1). • A preliminary risk assessment of potential environmental risks associated with the proposed redevelopment of the site to identified receptors, following the methodology of LCRM and their recommendations on contamination reports.
DEVELOPMENT PLANS	The proposed development for the site is mixed residential with associate private gardens, parking areas and communal soft landscaping. The proposed development is presented on Drawing Ref.: 1355-Site-102 produced by DK Architects (June 2026).
SITE DESCRIPTION	The site is irregular in shape, 0.31ha in area and can be accessed via gates on Collyhurst Street on the western portion of the site. The southern most portion of the site is grassed with the remainder of the site heavily vegetated and therefore limiting access. Part of the eastern, southern and western boundaries comprise metal fencing, a brick wall makes up the remainder of the western boundary with the northern boundary comprising of a railway brick bridge support. The site is currently undeveloped
SITE HISTORY	**Onsite** The earliest available historical map (1848) indicated that buildings were present on site, however, the purpose of these buildings was unclear due to the scale and age of the map. By 1850, Platting Cotton Mill was noted to encroach onto the western portion of the site and therefore the other onsite buildings could potentially be associated with this mill. By 1891 a hotel was noted on the south-western corner of the site. Between 1893 and 1894 the mill was noted as disused and potential residential properties were noted to encroach onto the southern portion of the site. Between 1908 and 1909, the hotel was noted as a public house. No further change was noted on site until the historical map dated 1948-1949 when most of the building associated with the mill had been demolished, two blocks of residential properties were noted next to the public house and the remainder of the site was noted to be undeveloped with the residential properties previously noted on the southern border no longer evident. By 1965 buildings were noted on the northern portion of the site, however the purpose of these buildings was again unclear. By 1970, the residential properties previously noted next to the public house were no longer noted. By 1999 the public house was the only building noted to remain on the site, however this building was demolished by 2006, and no further changes were noted on the site based on the most up to date map dated 2025.

	Offsite Historical maps initially indicate that off-site the surrounding land comprised fields, railway lines, brickfields, brick works, collieries, coal pits, engine sheds, a brook, chemical, steel, bottle, iron, gas, machine, wagon and dye works, old quarries, demolition potentially relating to WW2 bombing, the Rochdale Canal, local amenities and residential properties.
GEOTECHNICAL UNCERTAINTY	The site has been subject to previous development and therefore, the potential for relic foundations, obstructions and potential basements cannot be discounted. The site is also currently heavily vegetated.
GEOLOGY	**Artificial** There are no records of any artificial ground on-site however there are three records of artificial ground within 500m of the site including worked ground 420m north-west, Made Ground 422m north-west and infilled ground 485m south of the site. **Drift** The superficial deposits for the site are noted as Devensian Till. **Solid** The solid geology for the site is noted as being Pennine Upper Coal Measures – Mudstone, Siltstone and Sandstone.
HYDROGEOLOGY	The Bedrock is classified as a Secondary A Aquifer with the Superficial Deposits classified as Unproductive Strata. No groundwater abstractions have been identified within 500m of the site.
FAULTS	No faults have been identified within the development site boundary. The closet fault is noted 287m north-west of the site. A Rock Segment is noted to run through the centre of the site. This will require consideration in respect to foundation design.
RADON	According to the Envirocheck Report, the site is not within a radon affected area, as <1% of homes are above the action level. No radon protection measures are necessary in the construction of new dwellings or extensions.
COAL MINING	The site is within a coal mining area and the following is of note: - Probable Unrecorded Shallow Workings - Mine Entries
HYDROLOGY	There are no surface water features within 250m of the site. No surface abstractions have been identified within 250m radius of the site.
RISK ASSESSMENT	The Phase I PRA has not highlighted significant areas of concern and therefore, the site is deemed to be Class 2 – Medium Risk.
CONCLUSIONS & RECOMMENDATIONS	Based on the findings of the Phase I review, Sutcliffe Investigations do not consider there to be any identifiable significant environmental issues regarding the site. However, there is limited information of the ground for geotechnical properties and as such we would therefore recommend the following sequential works are undertaken: - Submission of this Phase I PRA Report for the benefit of validating the outline planning application. - Commission a Phase II Ground Investigation designed to discharge any contaminated land conditions that may be assigned to the site and allow the design of economic foundation solutions. - Commission a Coal Mining Risk Assessment.

NOTE: The executive summary is an overview of the key findings and conclusions of the report. There may be other information contained in the body of the main report which puts into context the information presented within the executive summary. No reliance should be placed on the executive summary.

1 Introduction

1.1 Terms of Reference

Sutcliffe Investigations were instructed by Jigsaw Homes to undertake a Phase I Preliminary Risk Assessment (PRA) of the site known as Oldham Road, Miles Platting, Manchester M40 8RR.

1.2 Development Proposal & Legislative Context

Development Proposal

The proposed development for the site is mixed residential with associate private gardens, parking areas and communal soft landscaping. The proposed development is presented on Drawing Ref.: 1355 – Site – 102 produced by DK Architects (June 2026).

Legislative Context

The presence of contaminants which may pose a risk to human health and / or the environment is a planning consideration. As part of the planning regime, it needs to be considered whether the site is "suitable for its proposed end use". Planning is concerned with the site's proposed end use, not its current use, where the amount of contamination is required to be low relative to the level of risk.

Section 57 of the Environment Act 1995 adds Part 2A (ss. 78A to 18YC) to the Environmental Protection Act 1990 and contains the legislative framework for identifying and dealing with contaminated land. Where development is undertaken on land which may be affected by contamination, the National Planning Policy Framework, paragraph 189 to 194 considers pollution and remediation. This links the contaminated land regime within the development process.

For there to be a significant risk requiring further investigation a perceived source (contaminant), a receptor (humans, living organisms or property) and a pathway between them must all be present, resulting in a complete contaminant linkage.

In order to assess whether this is the case, background research is required to obtain relevant information about the site and its surroundings and to assess the findings qualitatively. The scope of the assessment examined whether there is the potential for current and historic soil and/or groundwater contamination to be present, both at and in the vicinity of the site, and to assess significance in terms of the potential to pose a risk to human health, controlled waters, building infrastructure and the wider environment and identify any associated potential liabilities.

Part 2A of the Environmental Protection Act 1990 ("Part 2A") provides the legislative framework for the contaminated land regime in England, Wales and Scotland. It provides for contaminated land to be identified and dealt with in a risk-based manner. The Contaminated Land (England) Regulations 2006 (SI 2006/1380) set out provisions for procedural matters under Part 2A. The 2006 regulations have recently been modified with the introduction of The Contaminated Land (England) (Amendment) Regulations 2012, which came into force on 6th April 2012. This includes an amendment to Regulation 3(c) to

take account of the updated definition of "controlled waters" in Section 78A(9) of the Environmental Protection Act 1990. Section 78A(2) of Part 2A of the EPA 1990 defines contaminated land as "land which appears to the local authority in whose area it is situated to be in such a condition, by reason of substances in, on or under the land, that:

- significant harm is being caused or there is a significant possibility of such harm being caused; or
- pollution of controlled waters is being or is likely to be caused.

Contaminated Land Statutory Guidance published in April 2012 provides for a new four category test which is intended to clarify when land does or does not need to be remediated, where Category 1 is deemed as being high risk and Category 4 as being low risk.

1.3 Previous Studies

Sutcliffe are not aware any previous environmental or geotechnical investigations having been completed on site.

1.4 Objectives & Scope of Assessment

The Phase 1 PRA is required to assess the ground based environmental and geotechnical risks, development constraints and liabilities associated with the development of the site, required in support of an application for outline planning.

This report will inform the study of any potential contaminated land issues to be identified, assessed and actioned and has been designed to provide sufficient information to satisfy the requirements of National Planning Policy Framework (NPPF) in order to satisfy the aims and objectives of the project.

The report will culminate in the presentation of a Preliminary Conceptual Site Model (CSM) and will include clear robust recommendations for any additional works. These works will be designed to fully assess and mitigate risks, development constraints and abnormals that may be required in support of a detailed planning application and design of detailed foundation options.

This report constitutes a preliminary investigation as defined in BS10175 and contains the following:

- Summary of the information obtained from an Envirocheck Report (Report Ref.: 382261253-1-1), which is presented in Appendix A.
- A preliminary risk assessment of potential environmental risks associated with the proposed redevelopment of the site to identified receptors, following the methodology of Land contamination risk management (LCRM) and their recommendations on contamination reports.
- Recommendations for further investigation/actions if required.

The scope of works was to undertake a Phase I PRA using available information, and to place the site in its environmental context and has included the following:

- A review of available historic maps to determine the land-use history in the context of potentially contaminative activities;
- A review of environmental data relating to the site and its surroundings using a proprietary third-party environmental database;
- Desk-based assessment of site geology, hydrogeology and hydrology from published mapping and web-based sources to determine the site's environmental setting and sensitivity;
- A web-based search of the Environment Agency (EA) website and other freely available sources of information to identify any potential issues relating to the site and surrounding areas; and
- Provision of a qualitative contaminated land risk assessment based on Source-Pathway-Receptor as per current best practice contained in LCRM.

A site inspection was undertaken by a Sutcliffe engineer – Alex Tosh, on the 4th August 2025. No sampling or testing of soils or waters will be undertaken as part of this environmental review. All other information in this report has been obtained via public sources.

2 Environmental Review

2.1 Introduction

The information presented within this chapter was compiled based on a site inspection, completed by a suitably qualified Sutcliffe Engineer, and a review of an Envirocheck Report (Report Reference: 382261253-1-1), presented in Appendix A.

2.2 Site Location & Setting

The site address is located at Oldham Road, Miles Platting, Manchester M40 8RR at National Grid Reference (NGR) 385760,399770 and is approximately 2.50km north-east from the centre of Manchester.

Location plans of varying scales are presented as *Figures 1 & 2* and an Aerial Photograph is presented as *Figure 3*.

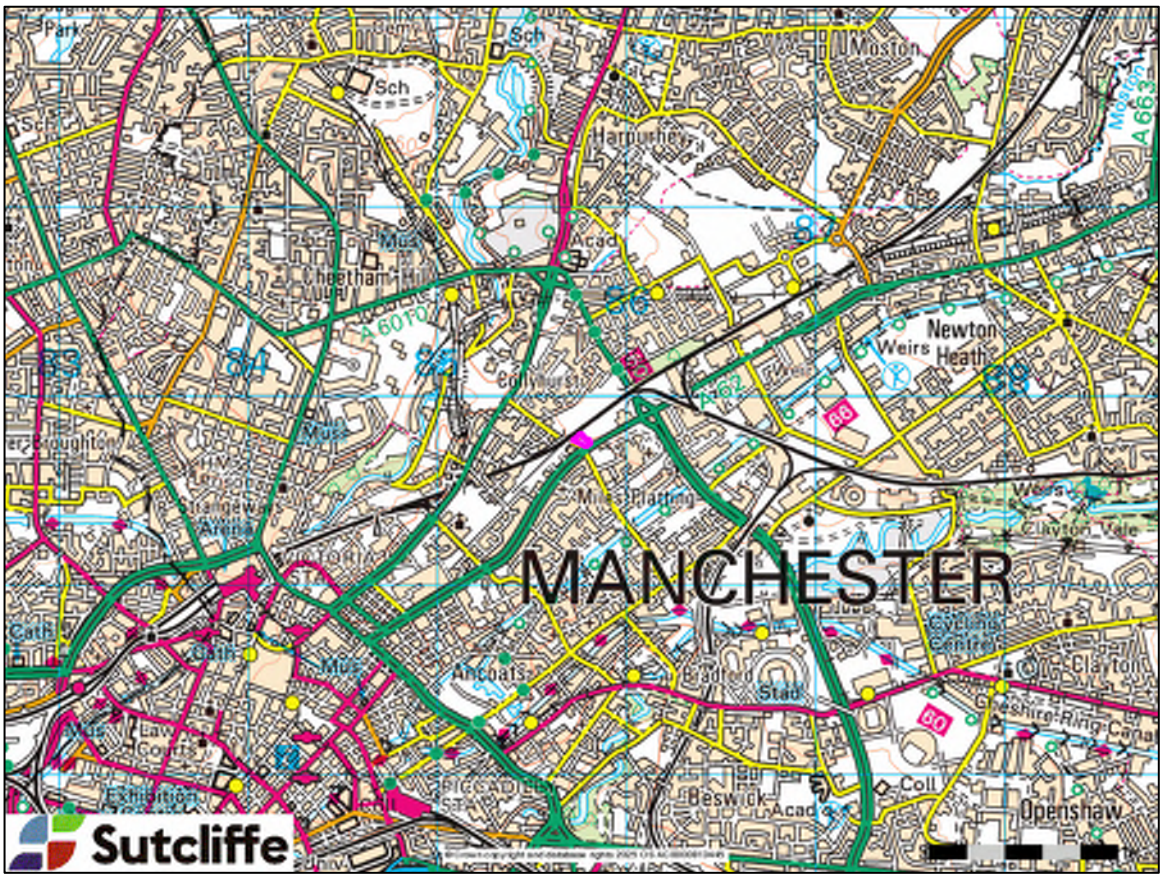

Figure 1: General Location of Site

2.3 Site Description & Walkover

The site is irregular in shape, 0.31ha in area and can be accessed via gates on Collyhurst Street on the western portion of the site. The southern most portion of the site is grassed with the remainder of the site heavily vegetated and therefore limiting access. Part of the eastern, southern and western boundaries comprise metal fencing, a brick wall makes up the remainder of the western boundary with the northern boundary comprising of a railway

brick bridge support. The site is currently undeveloped. A photographic log of the site is presented as Appendix B.

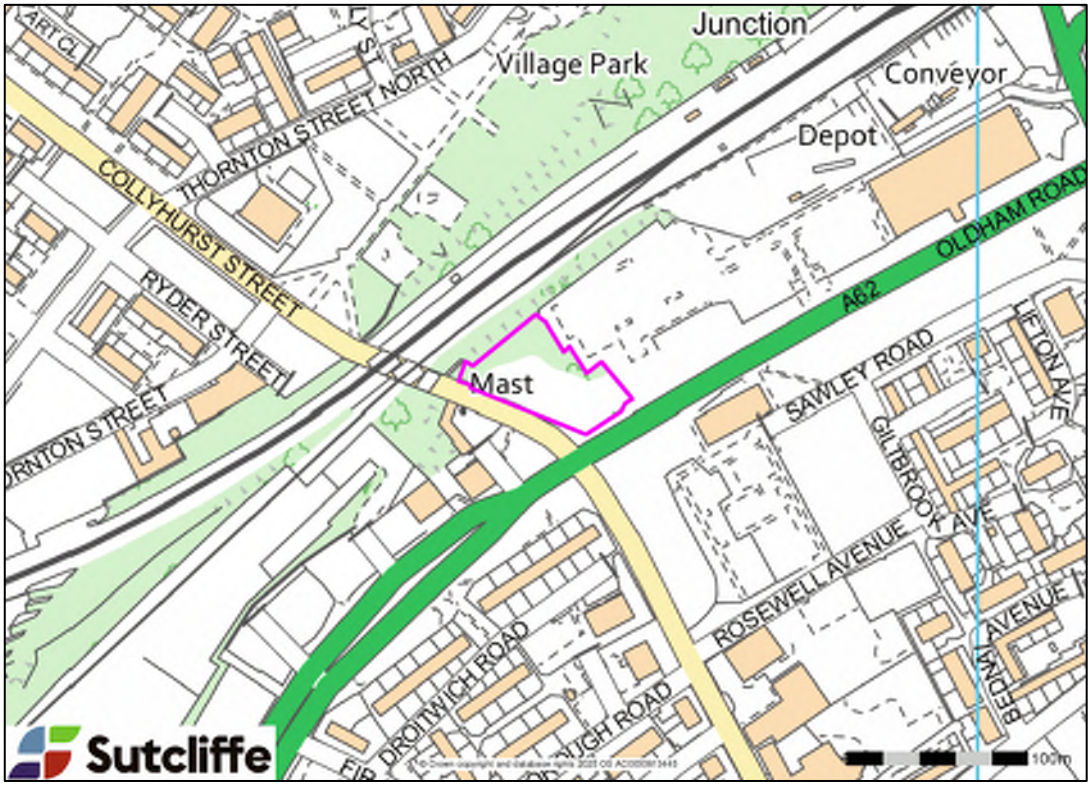

Figure 2: General Site Layout

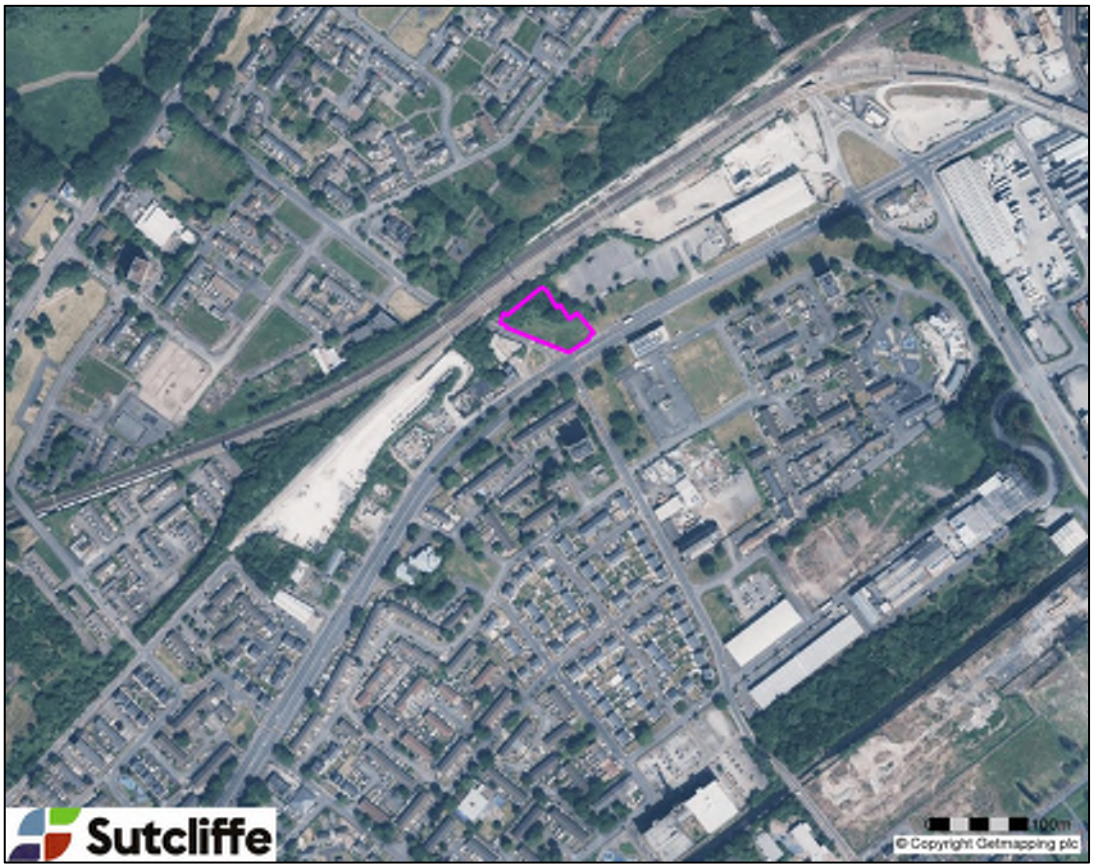

Figure 3: Aerial Photograph

2.4 Adjacent Land Uses

Table 2.1 summarises the adjacent land uses.

Table 2.1: Adjacent Land Uses

Direction	Adjacent Land Use
North	Railway Bridge
East	Car Parking / Disused Shopping Centre / GB Railfreight
South	Offices / Carparking / Undeveloped Land
West	Mixed commercial / Residential

2.5 Services

Underground Pipelines and Transmission Assets

A search of the Linesearch database was undertaken on 29th July 2025. This database lists pipelines owned and/or operated by over 40No. pipeline and transmission operators, but not all operators are registered.

According to the database, Cadent Gas, Electricity North West Limited, EUNetworks Fibre Uk Limited, Neos Networks and Zayo Group UK Ltd are noted to have underground pipelines or transmission assets within the vicinity of the site.

Service plans are presented in Appendix C.

Electric

A LV electricity cable enters the site from its southwestern edge and leads to the centre of the site.

Gas

There are no gas pipelines within the site boundary.

Water

There are no sewer pipelines within the site boundary. A sewer pipeline runs along the east of the site. There are no clean water pipelines within the site.

BT

No BT cables are noted within the site boundary.

2.6 Site History

Historical maps were obtained and reviewed by Sutcliffe Investigations to determine the historical development of the target site. These are presented in Appendix A. This enabled an assessment to be made of the potential for contamination associated with former activities, both on-site and in the surrounding areas.

Onsite

The earliest available historical map (1848) indicated that buildings were present on site, however, the purpose of these buildings was unclear due to the scale and age of the map. By 1850, Platting Cotton Mill was noted to encroach onto the western portion of the site and therefore the other onsite buildings could potentially be associated with this mill.

By 1891 a hotel was noted on the south-western corner of the site.

Between 1893 and 1894 the mill was noted as disused and potential residential properties were noted to encroach onto the southern portion of the site.

Between 1908 and 1909, the hotel was noted as a public house. No further change was noted on site until the historical map dated 1948-1949 when most of the building associated with the mill had been demolished, two blocks of residential properties were noted next to the public house and the remainder of the site was noted to be undeveloped with the residential properties previously noted on the southern border no longer evident.

By 1965 buildings were noted on the northern portion of the site, however the purpose of these buildings was again unclear.

By 1970, the residential properties previously noted next to the public house were no longer noted.

By 1999 the public house was the only building noted to remain on the site, however this building was demolished by 2006, and no further changes were noted on the site based on the most up to date map dated 2025.

A detailed review of the historical development of the site is presented in Appendix D.

Offsite

The earliest historical map dated 1848, identified potential residential properties immediately east and west of the site. A railway line was noted approximately 10m north of the site, a brickfield approximately 120m north-west of the site with a colliery and coal pit noted approximately 320m west of the site. An engine shed was noted approximately 210m south-west of the site. A Brook was noted 250m south of the site, a chemical works was noted 420m south of the site and a coal pit 315m south-east of the site. The Manchester Steel works was also noted approximately 530m south-east of the site.

By 1850, no significant change was noted in the surrounding areas of the site, however by 1891, much of the immediate surrounding area was noted to be built up with residential properties and industrial premises.

Between 1893 and 1894 a chapel was noted approximately 55m north-east of the site, a glass bottle works, and mill were noted approximately 110m west of the site, a machine works was noted approximately 200m west and an iron works was noted approximately 344m west. A wagon works was noted approximately 200m north-east, old quarries were noted between 500-800m southwest of the site, a gas and dye works were noted approximately 780m east, a brick and coal yard approximately 845m south-east and

Manchester Floor Cloth Manufactory was noted approximately 160m south of the site beyond which a glass works was noted.

Between 1908 and 1909 the wagon factory was noted to be a tank yard, and the glass works to the south of the site was now noted as a school. In this time there had also been a slight increase in residential properties, particularly between 500-900m south-east of the site.

Between 1922 to 1923 other than a slight increase in residential properties in the surrounding areas, little further change was of note.

No further change was noted until 1938 when large areas of demolition were noted approximately 80m north and 560m south of the site. Further demolition was noted between 1948 and 1949 with buildings noted to be demolished 24m east and 71m north-west of the site, this demolition could be a result of WW2 bombing. The configuration of houses was also noted to change approximately 170-400m north-east of the site.

Between 1951 and 1956 houses were again noted in the area that was demolished approximately 560m south of the site in 1938 and the Rochdale Canal was noted approximately 500m south of the site.

Again little further change was of noted until between 1970 and 1991 when houses were demolished between 20-130m south of the site, and apartment block was noted approximately 90m south of the site replacing the works and the area between 130-250m south-east of the site had become built up with a school, a church and a hall, with a care home and health centre also noted in this area.

By 1999 the area between 400-1000m east of the site remained largely industrial with the remainder of the surrounding areas largely comprising of residential properties and local amenities.

No further changes were noted in the surrounding areas of the site based on the most recent map dated 2025.

A detailed review of the historical development of the surrounding land uses is presented in Appendix D.

2.7 Environmental Database

A commercial database search (provided by Envirocheck) was obtained to provide further information regarding the site and the surroundings. Relevant information and records are summarised below:

Contaminated Land Entries

The database has no contaminated land entries within 500m of the site.

Environmental Permitted Activities

According to the database there are no current Local Authority Integrated Pollution Prevention and Controls. There are 4No. Local Authority Pollution Prevention and Controls within 500m of the site, with 2No. records within 250m of the site, details of which are presented hereunder:

Table 2.2: Environmental Permitted Activities

Distance / Direction (<250m)	Name	Description	Status
125m NW	Tarmac Central Ltd	PG3/1 Blending, packing, loading and use of bulk cement	Authorised
237m SW	21st Century Garages	PG1/14 Petrol filling station	Authorisation Revoked

Hazardous Substances Sites

According to the database, there are no Control of Major Accident Hazards (COMAH) registered sites, no Explosive Sites, no Notification of Installations Handling Hazardous Substances (NIHHS) sites and no Planning Hazardous Substances Consents or Enforcements within 500m of the site.

Substantiated Pollution Incident Register

According to the database, there are no substantiated pollution incidents within 500m of the site.

Landfill Sites

According to the Envirocheck Report there are;

- No BGS Recorded Landfill Sites noted within 500m of the site.
- There is 1No. Historic Landfill site noted within 500m of the site.
- No Local Authority Recorded Landfill Sites noted within 500m of the site.
- No Registered Landfill sites noted within 500m of the site.

Table 2.3: Historic Landfill Sites

Distance / Direction (<500m)	Licence Holder	Name	Specified Waste Type	Last Input Date
408m NW	Not Supplied	Fitzgeorge Street	Not Supplied	Not Supplied

Infilled Land

There are 7No. records of Potentially Infilled Land (Non-Water) within 500m of the site, with 2No. records within 250m of the site, details of which are provided hereunder:

Table 2.4: Infilled Land (Non-Water)

Distance / Direction (<250m)	Use	Year
66m W	Unknown Filled Ground (Pit, quarry etc)	1993
134m S	Unknown Filled Ground (Pit, quarry etc)	1993

There are 21No. records of Potentially Infilled Land (Water) within 500m of the site, with 5No. records within 250m of the site, details of which are provided hereunder:

Table 2.5: Infilled Land (Water)

Distance / Direction (<250m)	Use	Year
40m SW	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
72m N	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
102m SE	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
110m S	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
124m NE	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848

Waste Management Facilities

The database has recorded no Registered Waste Treatment or Disposal Sites.

The database has recorded 2No. Registered Waste Transfer Sites within 500m of the site, details of which are provided hereunder.

The database has recorded 1No. Licensed Waste Management Facility within 500m of the site, details of which are provided hereunder.

Table 2.6: Registered Waste Transfer Sites

Distance / Direction (500m)	Licence Holder	Authority	Max Input Rate	Licence Status
288m NE	Park Pit Landfill Ltd	Environment Agency - North West Region, South Area	Large (Equal to or greater than 75,000 and less than 250,000 tonnes per year)	Licence has completion certificate surrendered
358m SW	Re-Can Ltd	Environment Agency - North West Region, South Area	Very small (less than 10,000 tonnes per year)	Site exempt from licence

Table 2.7: Licensed Waste Management Facilities

Distance / Direction (500m)	Operator Name	Authority	Site Category	Licence Status
199 NE	BIFFA WASTE SERVICES LIMITED	Environment Agency - North West Region, South Area	Transfer Stations taking Non-biodegradable Wastes	Issued

Radioactive Materials

According to the Envirocheck Report, there are no authorisations for radioactive substances within 500m of the site.

Fuel Stations

According to the database, there is 1No. fuel station entry within 500m of the site, details for which are provided hereunder:

Table 2.8: Fuel Stations

Distance / Direction (<500m)	Name	Status
237m SW	Impact Services Ltd	Obsolete

Contemporary Industrial Land Uses

According to the database, there are 62No. entries located within 500m of the site, with 9No. located within 250m of the site, the details of which are presented hereunder:

Table 2.9: Contemporary Industrial Land Uses

Distance / Direction (<500m)	Name	Classification	Status
70m SW	Al Medina Motors	Garage Services	Inactive
78m SW	Paramount Belts	Bags, Belts & Accessories – Manufactures and Suppliers	Inactive

2.8 Historical Contamination Potential

Site

Historical maps have indicated that buildings were present on site in 1848, however due to the scale and age of the maps, the purpose of these buildings was unclear. By 1850, Platting Cotton Mill was noted to encroach onto the western portion of the site and the other buildings onsite could have been associated with this mill.

By 1891 a hotel was noted on the south-western corner of the site. The onsite mill was disused by 1893, and residential properties were noted to encroach onto the southern portion of the site. The hotel was noted as a public house by 1908 with no further changes

noted until 1948-1949 when most of the buildings associated with the mill had been demolished, two block of residential properties were noted next to the public house on the western boundary with the remainder of the site noted as undeveloped as the residential properties on the southern border were also no longer noted.

By 1965 building were noted on the northern portion of the site, but the purpose of which was once again unclear. The residential properties noted between 1948-1949 were no longer evident by 1970 and by 1999 the public house was noted as the only building on the site. This public house was no longer noted by 2006, and no further developments were evident based on the most recent map dated 2025.

Made ground is likely to be present on site, and the potential for basements associated with the hotel / public house cannot be dismissed. Additionally, due to the mill and other buildings noted on site, the purpose of which were unclear, the potential for significant contamination to have arisen at the site as a result of the current and former usage on site is considered to be moderate.

Surrounding Area

Historical industrial activity has been noted in the surrounding areas of the site; the site is also bordered by raised railway lines to the north and GB railfreight Manchester associated with the railway in close proximity to the eastern border of the site.

Therefore, the potential for off-site sources of contamination to impact the site is considered moderate.

3 Environmental Setting

3.1 Introduction

Desk-based research of the local geology, hydrogeology, hydrology and ecology was carried out in order to establish the potential for migration of contamination onto or away from the site, and to assess the surface water and groundwater sensitivity of the surrounding area. Information was obtained from a number of sources, namely:

- Inspection of the British Geological Survey (BGS) GeoIndex Onshore Viewer;
- Inspection of the MAGIC interactive map service;
- A review of online web-based information searches;
- A review of previous site investigation reports pertaining to the site; and,
- A review of publicly available information.

3.2 Soils Chemistry

The environmental database also presents an estimation of the rural background soil chemistry within the site area.

Table 3.1: Soil Chemistry

Contaminant	Concentration (mg/kg)
Arsenic	25-35
Cadmium	<1.8
Chromium	60-90
Lead	100-200
Nickel	15-30

Reference to the data presented suggests that the majority of metals concentrations with the potential exception of Arsenic and Lead are generally anticipated to be below current Tier 1 Assessment Criteria in relation to human health effects.

3.3 Geology

According to the BGS GeoIndex Onshore Viewer and the relevant British Geological Survey (BGS) Solid and Drift Sheets 85 Manchester (2010) at a scale of 1:50,000 the following geological succession has been identified (Appendix A).

Artificial Ground

There are no records of any artificial ground on-site however there are three records of artificial ground within 500m of the site including worked ground 420m north-west, Made Ground 422m north-west and infilled ground 485m south of the site.

Superficial Geology

The superficial drift deposits for the site are noted as Till, Devensian - Clay, sandy, gravelly, silty.

Solid Geology

The solid geology for the site is noted as Pennine Upper Coal Measures Formation - Mudstone, Siltstone and Sandstone.

Table 3.2: Geology Summary

Strata	Description	Soil / Rock Type
Artificial Ground	On-site No records	N/a
Drift	Till, Devensian	Clay, sandy, gravelly, silty
Solid	Pennine Upper Coal Measures Formation	Mudstone, Siltstone & Sandstone

Faults

No faults have been identified within the development site boundary. The closet fault is noted 287m north-west of the site.

A Rock Segment is noted to run through the centre of the site. This will require consideration in respect to foundation design.

British Geological Society (BGS) Logs / Records

Although borehole logs have been produced in the areas of the site, the information is not available to compare similarly mapped geological conditions as the site.

There are eleven BGS Recorded Mineral sites within 1000m of the site, the closest of which was 295m west of the site, however, all these workings have ceased.

Ground Stability

Table 3.3 below summarises the natural hazards information presented in the Envirocheck Report.

Table 3.3: Potential Natural Hazards

Natural Hazard	Hazard Potential
Shrink - Swell Clays	Very Low
Landslides	Very Low
Soluble Rocks	No Hazard
Compressible Deposits	No Hazard
Collapsible Deposits	Very Low
Running Sands	Very Low

3.4 Coal Mining & Brine Subsidence

The site does fall within a coal mining area. Based on the Consultants Coal Mining Report (*Report Reference: 51003514717001)* the following is of note:

- The following Past Underground Mining is noted within the report:
- Probable Unrecorded Shallow Workings are recorded.

- No Spine Roadways are recorded at shallow depth.

Table 3.4 Past Underground Mining

Seam	Depth (m bgl)	Direction of Working	Dip	Extraction Thickness (cm)
PARKER	259	North	17.9	80
PARKER	330	North	17.9	80
PARKER	355	North-East	18.0	80
PARKER	372	Beneath Property	7.8	80
CROMBOUKE	445	North	14.3	120
ROGER	617	North-East	16.2	180
ROGER	621	North-East	16.1	180
ROGER	623	North-East	17.2	180
ROGER	650	North	17.4	180
CROMBOUKE	674	Beneath Property	21.0	120
ROGER	683	Beneath Property	20.8	180
ROGER	709	West	21.6	180

There following known coal mining entries have been recorded;

Table 3.5 Mine Entries

Entry Type	Reference	Grid Reference	Treatment
Shaft	385399-006	385634 399762	Treatment Details Unknown*
Shaft	385399-007	385675 399820	Treatment Details Unknown*
Shaft	385399-008	385808 399682	Treatment Details Unknown*

* Before the coal industry was nationalised in 1947, there was no requirement for a mine operator to record mine entry treatment details when a mine was abandoned. Therefore, it is not unusual for us to have no treatment details for many of the 176,000 recorded mine entries on our database. Despite this lack of information, please be assures that the fact we have no treatment recorded does not necessarily mean that the mine entries were left untreated when abandoned.

The following Abandoned Mine Catalogue Numbers are noted intersecting with the site boundary.

Table 3.6 Mine Entries

2655	NW1171	NW645
PO0	11471	0
NW1172	NW644	

- The following outcrops are recorded

Table 3.7 Outcrops

Seam Name	Mineral	Seam Workable	Distance to Outcrop (m)	Direction to Outcrop	Bearing of Outcrop
Yard	Coal	Yes	Within	N/A	109

- No Opencast mines are recorded within 500m of the site boundary.

- No records of Coal Mining subsidence within 50m of the site boundary.
- There is no record of mine gas emissions recorded within 500m of the site boundary.

The potential risks to the development of the site from historic coal workings and remediation to these features as identified within the Coal Authority Report are summarised below in *Table 3.8*.

Table 3.8: Potential Coal Mining Issues

Coal Mining Issues	Yes	No	Risk Assessment
Underground coal mining (recorded at shallow depths)		✓	Not required
Underground coal mining (probable at shallow depths)	✓		Required
Mine Entries (shafts and adits)	✓		Required
Coal mining geology (fissures)		✓	Not required
Record of past mine gas emissions		✓	Not required
Recorded coal mining surface hazard		✓	Not required
Surface mining (opencast workings)		✓	Not required

Based on the above, a Coal Mining Risk Assessment would be recommended for the site.

A full copy of the Coal Authority Mining Repot can be found in Appendix E.

3.5 Unexploded Ordnance (UXO)

Based on potential bomb damage in the vicinity of the site, a detailed UXO Risk Assessment has been ordered. Within this report a semi-quantitative Assessment has been undertaken and the UXO risk rating is assed to be **HIGH.**

Further details are provided in the detailed Unexploded Ordnance (UXO) Threat and Risk Assessment with Risk Mitigation Strategy presented in Appendix F.

3.6 Radon

According to the Envirocheck Report, the site is in a Lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level). No radon protection measures are necessary in the construction of new dwellings or extensions.

3.7 Hydrogeology

Groundwater protection policy uses aquifer designations that are consistent with the Water Framework Directive.

These designations reflect the importance of aquifers not only in terms of groundwater as a resource (drinking water supply) but also their role in supporting surface water flows and wetland ecosystems.

Types of aquifer designations are presented in *Table 3.9*, with the designations assigned to the underlying strata of the site in *Table 3.10* hereunder:

Table 3.9: Aquifer Designations

Designation	Description
Principal Aquifer	Layers of rock or drift deposits that have high intergranular and / or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and / or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifer.
Secondary A Aquifer	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formally classified as minor aquifers.
Secondary B Aquifer	Predominantly lower permeability layers which may store and yield limited amounts of groundwater due to localised features such as fissures, thin permeable horizons and weathering. These are generally the water-bearing parts of the former non-aquifers.
Secondary (Undifferentiated) Aquifer	Cases where it has not been possible to attribute either category A or B to a rock type. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type.
Unproductive Aquifer	Rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow.

Table 3.10: Hydrogeology Summary

Drift	Till, Devensian	Clay, sandy, gravelly, silty	Designation
Superficial	Pennine Upper Coal Measures Formation	Mudstone, Siltstone & Sandstone	Secondary Aquifer Undifferentiated
Bedrock	Till, Devensian	Clay, sandy, gravelly, silty	Secondary A Aquifer

The Envirocheck Report indicates that the site is not located within a Groundwater Source Protection Zone (SPZ).

There are thirty-one groundwater abstraction points listed in the Envirocheck Report within 2000m of the site, the closest of which is 741m east of the site.

3.8 Hydrology

The following is also of note:

- The nearest surface water feature is noted 477m south-east of the site and relates to the Rochdale Canal.
- There are eleven recorded pollution incidents to controlled waters listed in the Envirocheck Report. The nearest is noted as being 305m north-east of the site, the pollutant was unknown with an incident severity of category 3 (minor incident).
- There are eight surface water abstractions listed within the Envirocheck Report within 2000m of the site, the closest of which is 918m north-west of the site.
- There are no biological or chemical quality records noted within the vicinity of the site.

3.9 Flood Risk

According to the Envirocheck Report, the site is not within 250m of an area at risk from extreme flooding from rivers or sea without defences.

According to the Envirocheck Report, the site is at low risk of flooding from surface water.

According to the BGS Flood GFS Data map, the site is situated within an area that has the potential for groundwater flooding of a property situated below ground level. surface.

3.10 Sensitive Land Uses

Ecological Receptors

According to the database, there is 1No. type of Sensitive Land Uses within 1000m of the site, the details of which are provided below:

- The site is situated in a Nitrate Vulnerable Zone.

Significance of Environmental Setting

The significance of the environmental setting is considered by Sutcliffe Investigations to be as follows:

Table 3.11: Environmental Setting Summary

Environmental Setting	Sensitivity	Rationale
Groundwater	Low – Moderate	The site is situated in an area of low-moderate sensitivity with respect to groundwater resources due to the presence of an Unproductive Aquifer and Secondary A Aquifer beneath the site. However, this sensitivity is reduced by the absence of any abstractions (sensitive or otherwise) within the immediate vicinity of the site.
Surface Water	Low	With respect to surface water resources, the site is considered to be located in a low sensitivity setting.
Flood Risk	Low	The site is not within 250m of an area at risk of extreme flooding from rivers or sea without defences.
Sensitive Land Uses	Low	With respect to sensitive land uses such as protected habitats, protected sites, protected buildings and sensitive receptors, the site is considered to be located in a low sensitive setting.

4 Preliminary Qualitative Risk Assessment

4.1 Preliminary Conceptual Site Model (CSM)

A conceptual model is an essential element of any site-specific environmental risk assessment. In this context, they are often simple representations of the hypothesised relationships between sources, pathways and receptors.

For the purpose of this report, a basic conceptual model has been developed based on the principles of LCRM and interpretation of information gathered during the Phase I review. Thus, this allows the identification of potential contaminant linkages and whether these linkages have the potential to comprise significant harm and/or pollution of controlled waters in relation to the site.

Based on this interpretation, the implications for potential liability associated with soil or water contamination at the site can be evaluated.

- **SOURCES** – the identification of contaminants within the soils and groundwater that represent potential pollution sources;
- **PATHWAYS** – the identification of the potential exposure mechanisms and migration pathways from the potential sources; and
- **RECEPTORS** – the identification of the potential receptors that could be sensitive to harm if exposed to these pollution sources.

Collectively, each of these scenarios would be considered a potential pollutant linkage that may require further assessment.

A preliminary conceptual model is presented below (*Table 4.7*) in accordance with the guidance outlined within LCRM.

4.2 Identification of Potential Sources

Based on the information from the desk study, historical maps, published information, and a site walkover a summary of potential contaminant sources is provided in *Table 4.1*.

Table 4.1: Potential Sources

Ref.	Potential Sources	Potential Contaminants
S1 (On-site)	Former Mill and other Demolished Properties	All metals, fuel, hydrocarbons and oils and localised ground gas.
S2 (Off-Site)	Historical Industrial Activity / Railway	All metals, fuel, hydrocarbons and oils and localised ground gas.

S1 (On-site)

Areas of Made Ground are anticipated across the majority of the site associated with the historic use of the site, notably the demolition of the former on-site buildings. Made Ground by its nature may contain contaminative material, most commonly heavy metals, PAHs and asbestos.

Made Ground is not anticipated to be of significant thicknesses capable of generating significant quantities of permanent gases onsite.

S2 (Off-site)

The railway siding to the north north-east of the site along with GB Railfreight Manchester to the east of the site may have the potential for ash and clinker to be identified.

Additionally historic industrial activity within close proximity to the site are possible sources of contamination, with contaminants that have the potential to migrate to site.

4.3 Potential Exposure Pathways

Exposure pathways are the potential routes and mechanisms by which potential on-site sources could be linked to the identified potential receptors and thereby expose them to potential harm.

The following potential exposure pathways have been identified at the site:

Table 4.2: Potential Exposure Pathways

Ref.	Pathway	Description
P1	Direct contact with potential contaminants.	Dermal absorption, ingestion and inhalation of contaminants via direct contact. Construction workers may come into contact during the site works, however this will be for a short time and therefore limited exposure will occur. PPE can be used and worn as a precaution to reduce the risk.
P2	Ingestion of potential contaminants.	
P3	Inhalation of potential contaminants.	
P4	Leaching and migration of contaminants.	Leaching of possible contaminants could migrate into the underlying Secondary A Aquifer via shallow groundwater. On site drainage is also at risk from shallow contamination, if present.
P5	Vertical and lateral migration of ground gases / vapours.	There is the potential for contaminants to be present on the site, which could generate ground gas & vapours on site.

P1 – P3 (Direct contact)

The site has been considered for a residential end-use with soft landscaping, and as such is considered a sensitive end-use.

If the identified contaminant sources are present or have migrated to the site, pathways to the receptors are considered possible.

P4 (Leaching & Migration)

Made Ground as previously discussed within section S1 may contain potentially leachable contaminants.

Historic contamination is considered possible which could migrate, however, volumes anticipated would be unlikely to be significant to impact controlled waters.

Lateral migration off-site may be possible, dependent on the composition of the underlying deposits, however such migration is considered possible though unlikely.

Downward migration of contaminants to the Secondary A Aquifer is considered unlikely due to the cohesive Glacial Till. As such, while downward migration may be possible, it is considered ultimately unlikely due to the anticipated cohesive horizons likely to be encountered within the strata.

P5 (Migration of ground gas / vapours)

It is considered pathway from offsite gas sources migrating to site is unlikely due to the widespread Glacial Till retarding potential migration. Due to a combination of the identified potential sources to be unlikely to be actively producing gas and a likely lack of migration pathways, risks from offsite migration of permanent gases to the site is considered to be low.

4.4 Potential Receptors

Based on the site's environmental setting and the proposed future end use of the area following redevelopment, the following potential receptors have been identified:

Table 4.3: Potential Receptors

Ref.	Receptor	Description
R1	Current & future site users	Site users; personnel, general workers and maintenance workers,
R2	Construction Workers	Contractors working on the development of the site. Construction workers, maintenance workers or other personnel who may be directly exposed to contaminated materials in the course of their activities).
R3	Controlled Waters	Secondary A Aquifer, Secondary Aquifer Undifferentiated and on-site drainage
R4	Adjacent Site Users	Adjacent site users. Third-party land (*i.e.* the possibility of contamination migrating off-site onto third party land *via* contaminated groundwater, surface water run-off).
R5	Infrastructure / Buried services	Proposed buildings and buried services

NOTE: ground workers (i.e. If the site were redeveloped, any associated activities may bring site personnel and construction workers into contact with potentially contaminative materials, however, it is considered that the risks to workers will be short term and could be controlled by safe working procedures.

4.5 Potential Contaminant Linkages

In order for there to be a plausible contaminant linkage there must be a source, receptor and pathway and a feasible linkage between them (a contaminant linkage).

Consequently, even where a contaminant is identified, if there is no pathway for the contamination to reach a receptor, or no receptor then there can be no significant risk and remedial actions are not required.

Central to this risk assessment process is the development of a 'conceptual model'. This is a descriptive and/or pictorial representation of the area of potential contamination, the

surrounding environment and the processes acting on the contaminants by which they can move and come into contact with receptors (*e.g.* by leaching and migration into groundwater).

Production of a conceptual model requires an assessment of risk to be made. Risk is a combination of the likelihood of an event occurring and the magnitude of its consequences.

Therefore, in order to assess risk both the likelihood and the consequences of an event must be taken into account.

This report adopts the methodology for risk evaluation presented in CIRIA report C552 'Contaminated Land Risk Assessment – A Guide to Good Practice', 2001.

The method is qualitative and involves the classification of the following:

- The magnitude of the potential severity or consequence of the risk occurring (*Table 4.4*);
- The magnitude of the likelihood or probability of the risk occurring (*Table 4.5*);
- Once the likelihood of an event occurring and its severity have been classified, a risk category can be assigned (*Table 4.6*).

Table 4.4: Classification of consequence

Classification	Definition
Severe	Acute risks to human health, catastrophic damage to buildings/property, major pollution of controlled waters.
Medium	Chronic risk to human health, pollution of sensitive controlled waters, significant effects on sensitive ecosystems or species, significant damage to buildings or structures.
Mild	Pollution of non-sensitive waters, minor damage to buildings or structures.
Minor	Requirement for protective equipment during site works to mitigate health effects, damage to non-sensitive ecosystems or species.

Table 4.5: Classification of Probability

Classification	Definition
High Likelihood	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term or there is evidence at the receptor of harm or pollution.
Likely	There is a pollution linkage, and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term
Low Likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place and is less likely in the shorter term.
Unlikely	There is a pollution linkage, but circumstances are such that it is improbable that an event would occur even in the very long term.

Table 4.6: Risk Assessment Matrix

Consequence					
Severe	Medium	Mild	Minor		
Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk	High Likelihood	Probability
High Risk	Moderate Risk	Moderate / Low Risk	Low Risk	Likely	
Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk	Low Likelihood	
Moderate / Low Risk	Low Risk	Very Low Risk	Very Low Risk	Unlikely	
Low Risk	Very Low Risk	Very Low Risk	Very Low Risk	Negligible Likelihood	

Sutcliffe has devised a conceptual model based on the information obtained to date through the desk-based study and future residential usage of the site. This is detailed in tabular format in *Table 4.7* and pictorially in *Figure 4*.

Table 4.7: Preliminary Risk Evaluation of Potential Contaminant Linkages

1. Hazard Identification		2. Hazard Assessment				3. Risk Estimation		4. Risk Evaluation	5. Action required
Contaminant Source		Pathway		Receptor		Consequence	Probability	Classification	
S1	Former Mill and other Demolished Properties	P1	Direct contact with potential contaminants.	R1/2	Site users	Medium	Low	Moderate / Low Risk	It is possible that harm could arise to a designated receptor from an identified hazard. Investigation is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
		P2	Ingestion of potential contaminants.	R1/2	Site users	Medium	Low	Moderate / Low Risk	
		P3	Inhalation of potential contaminants.	R1/2	Site users	Severe	Unlikely	Moderate / Low Risk	
		P4	Leaching and migration of contaminants.	R3/5	Secondary A Aquifer	Medium	Low	Moderate / Low Risk	
		P5	Vertical and lateral migration of ground gases / vapours.	R1	Site users	Severe	Unlikely	Moderate / Low Risk	
				R4	Property	Severe	Unlikely	Moderate / Low Risk	
S2	Historical Industrial Activity / Railway	P1	Direct contact with potential contaminants.	R1/2	Site users	Medium	Low	Moderate / Low Risk	
		P2	Ingestion of potential contaminants.	R1/2	Site users	Medium	Low	Moderate / Low Risk	
		P3	Inhalation of potential contaminants.	R1/2	Site users	Severe	Unlikely	Moderate / Low Risk	
		P4	Leaching and migration of contaminants.	R3/5	Secondary A Aquifer	Medium	Low	Moderate / Low Risk	
		P5	Vertical and lateral migration of ground gases / vapours.	R1	Site users	Severe	Unlikely	Moderate / Low Risk	
				R4	Property	Severe	Unlikely	Moderate / Low Risk	

5 Conclusions & Recommendations

5.1 Introduction

Sutcliffe Investigations were instructed by Jigsaw Homes, to provide a Phase I PRA report. The purpose of the report is to generate preliminary environmental assessment data for submission with an outline planning application for redevelopment of the site.

This comprised a review of the Phase I PRA data, collection of environmental information and reports undertaken on the site.

5.2 Environmental Risk Assessment Findings

The site is irregular in shape and is bordered by a railway bridge to the north, car park, disused shopping centre and GB Railfreight to the east, offices and undeveloped land to the south and mixed commercial and residential properties to the west. The site currently consists of a heavily vegetated, undeveloped piece of land. The development history of the site has not identified potential sources of environmental concern. The site is underlain by a Secondary A Aquifer for the bedrock, with Unproductive Stratum for the superficial deposits.

Taking the above into account, it is considered that there is a moderate potential for significant contamination to be present.

5.3 Classification & Land Use Risk

The site can be accessed via gates on Collyhurst Street on the western portion of the site. The southern most portion of the site is grassed with the remainder of the site heavily vegetated and therefore limiting access. Part of the eastern, southern and western boundaries comprise metal fencing, a brick wall makes up the remainder of the western boundary with the northern boundary comprising of a railway brick bridge support. The site is currently undeveloped

Historical maps initially indicate that off-site the surrounding land comprised fields, railway lines, brickfields, brick works, collieries, coal pits, engine sheds, a brook, chemical, steel, bottle, iron, gas, machine, wagon and dye works, old quarries, demolition potentially relating to WW2 bombing, the Rochdale Canal, local amenities and residential properties.

The classification of risk is as follows:

Table 5.1: Land Use Risk Classification

Class	Description
Class 1	Potential for High levels of contamination and migration of contamination off the site.
Class 2	Potential for Medium levels of contamination and migration of contamination off site.
Class 3	Potential for Low levels of contamination and migration of contamination off site.
Class 4	Potential for limited contamination.

The Phase I PRA has not highlighted significant areas of concern and therefore, the site is deemed to be Class 2 – Medium Risk.

5.4 Geotechnical Uncertainty

The site has been subject to previous development and therefore, the potential for relic foundations, obstructions and potential basements cannot be discounted. The site is also currently heavily vegetated.

5.5 Conclusions & Recommendations

Based on the findings of the Phase I PRA review, Sutcliffe Investigations do not consider there to be any identifiable significant environmental issues regarding the site. However, there is limited information of the ground for geotechnical properties and as such we would therefore recommend the following sequential works are undertaken:

- Submission of this Phase I PRA Report for the benefit of validating the outline planning application.
- Commission a Coal Mining Risk Assessment (CMRA).
- Commission a Phase II Ground Investigation designed to discharge any contaminated land conditions that may be assigned to the site and allow the design of economic foundation solutions.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
