Mango – 90 Market Street. Manchester M1 1PB

New electrically operated automatic entrance doors

Design and Access Statement
July 2027

The current access into the Mango unit at 90 Market Street, Manchester M1 1PB is via an open doorway off of Market Street.

The unit is kept secure during non-trading hours via an electrically operated security roller shutter.

During trading hours, the security shutter is retained in the open position and the doorway is left open.

The proposal is to install new electrically operated automatic opening glazed entrance doors with black polyester powder coated door frames.

The new door frames will fit within the existing open doorway so no other external alteration is proposed.

This will retain existing heat within the unit.

The existing entranceway into the unit is step free and this arrangement will be retained once the new doors have been installed.
