

Planter Enhancement Range

Amberol's new stylish Planter Enhancement Range includes parklets that have been designed to create dedicated wellbeing and respite areas in public spaces and planter surrounds to improve aesthetics. They can also be used as part of traffic management schemes.

The Aquafeed™ Self-watering System

Amberol pioneered and developed a unique Self-watering System called Aquafeed™

A series of high capacity capillary action wicks “suck” water up from a sub-soil water reservoir onto a dispersal mat. This dispersal matting distributes the water evenly to the compost overlaying it, keeping it optimally moist at all times.

As a result, evaporation is kept to a minimum and plant roots absorb only the water they need, thereby keeping plants healthy and strong for longer. The Self-watering planters need only be topped up once or twice a week.

Aquafeed™ helps to save precious water resources. You also save considerable amounts of time and money because unlike traditional baskets they don’t need watering daily.

greener and cleaner

Whether this is a pop-up park on the high street, a well-being zone tucked into a quiet part of the city, rural parks, additional curb side seating for your restaurant or a dedicated lunch-time spot for your employees or students. The options with Amberol's Planter Enhancement Range are endless!

The parklets and planter surrounds do not require ground works or ground fixings and come with self-levelling feet as standard. This allows them to be used as permanent or temporary installations, offering a quick and cost-effective option to improve your area.

The integrated planters feature Amberol's sustainable metre square and promenade self-watering planters to minimise maintenance for long-lasting floral displays.

These planters can then be "hidden" with panels available in wood, wood effect recycled plastic, steel or Dibond panels for personalised graphics, logos, or sponsorship revenue.

These contemporary panels are easily interchangeable to create a variety of parklet seating and planter design combinations interconnected with a combination of roto moulded curved corners and T posts.

The posts can be manufactured from up to 100% recycled* materials and are available in a wide range of standard colours, we also have the facility to match* colours precisely, to create your ideal haven or reinforce your brand image.

*Subject to availability and MOQs

Designed and manufactured in the UK Amberol's new Planter Enhancement range is easily interchangeable to create a variety of parklet seating and planter design combinations to meet your requirements.

The core components of the parklets and planter surrounds consist of the metre square self-watering planter, the promenade self-watering planter, the roto moulded curved corners, the roto moulded T posts, seating and panels.

Use as few or as many components as you like to create your ideal configuration!
