CONFIDENTIALITY STATEMENT

This report is addressed to and may be relied upon by the following:

Latos Manchester Limited

This Preliminary Investigation [desk study and site reconnaissance] report has been prepared for the sole use and reliance of the above-named parties. This report shall not be relied upon or transferred to any other parties without the express written authorisation of RWO Group. No responsibility will be accepted where this report is used, either in its entirety or in part, by any other party.

The Preliminary Investigation includes an assessment of third party information which could include; a Landmark Envirocheck report, consultation with the local Authority, preliminary unexploded ordnance [UXO] risk assessment prepared by Zetica Ltd, and online information including Multi-Agency Geographic Information for the Countryside [MAGIC], the Environment Agency [EA], the Mining Remediation Authority [MRA], formerly known as the Coal Authority (CA), the British Geological Survey (BGS) and others.

Where a site visit/ walkover survey has been undertaken by RWO as part of this Phase 1 Desk Top Study, RWO can only report features present at the site at the time of the visit. RWO cannot be held responsible for any feature/ land use etc. associated with the site which may have been present either prior to or following the site visit. RWO cannot and does not guarantee the authenticity or reliability of third-party information it has relied upon.

This report has been produced in general accordance with the current relevant guidance and practice as set out within British Standard BS10175:2011 + A2:2017 – Investigation of potentially contaminated sites, BS EN ISO 21365:2020 – Soil quality – Conceptual site models for potentially contaminated sites, CIRIA C552 – Contaminated land risk assessment – A guide to good practice, the Environmental Agency [EA] Land Contamination Risk Management [LCRM] web pages and the National Planning Policy Framework [NPPF]. This report presents and interprets the factual information reviewed during this investigation and presents a Preliminary Conceptual Site Model [PCSM] from which ground-related hazards and risks have been assessed.

It has been assumed in the production of this report that ground levels will not change significantly from existing. If this is not the case, then amendments to the recommendations made in this report may be required.

Where the report refers to; the potential presence of invasive/ toxic plants [such as Japanese knotweed, Himalayan Balsam etc], any other ecological related matter, archaeology or asbestos-containing materials, such observations are for information only and should be verified by a suitably qualified expert.

DOCUMENT HISTORY

VERSION	PURPOSE/DESCRIPTION	DATE
1	First Issue	30th January 2026
2	Updated UXO Assessment and revised layout	24th February 2026
3	Updated client name and revised layout	30th March 2026

1.0 EXECUTIVE SUMMARY

RWO Associates Ltd were commissioned by Latos Manchester Limited (Latos) to provide a Preliminary Geoenvironmental Investigation of the site prior to its development with commercial properties, a proposed layout is not currently available. RWO's investigation included a review of desk study data and site walkover survey.

The site is located off Bower Street, approximately 7.5km Northeast of Manchester city centre (NGR SD870002). The site occupies an area of 1.28 hectares (3.17 acres). The semi rectangular parcel of land comprised an overgrown area with localised zones of concrete/ tarmac surfaced hard standing. The site appears to be bounded at least to the north and east by tall metal palisade fencing. The site is bordered by Bower Street to the north, Ten Acres Lane to the east with terraced houses in the northeastern corner. To the south there is The Rochdale Canal and Lock #74. To the west there are commercial warehouses for the company Hub Le Bas which is a national stockist and distributor of steel tubes.

A summary of salient geoenvironmental issues is provided in the table below.

Issue	**Remarks**
Made Ground	No made ground is shown to be present on-site, however, given that previous buildings were present on site, it is considered that areas of made ground may be present.
Natural Ground	Devensian Till of Diamicton, comprising a variable mixture of clay, silt, sand and gravel underlain by Triassic sandstones of the Chester Formation (Sherwood Sandstone Group).
Contamination Linkages	On site sources include previous buildings in the south east, and access routes and previous site uses as a recreation ground. Offsite sources such as nearby mills, dye works and quarries, nearby former reservoir to the west. Possible contaminant Pathways include direct ingestion, dermal contact, inhalation of dust/ volatiles/ gas, vertical/ lateral migration of leachable contaminants and ground gas, plant uptake and consumption and direct contact. Receptors include end users, construction workers, adjacent users, controlled waters, vegetation and buildings.
Hazardous Gas	It is likely there is some made ground of unknown thickness, which may present a source of ground gas. The nearby former reservoir may be a potential source of hazardous ground gas emissions.
Mining & Quarrying	Based on the geological setting of the site, information provided by the Mining Remediation Authority's (MRA) Interactive Viewer and MRA Consultant's Report, it is considered that the site is not at risk from historic coal mining activities.

	There is no obvious evidence of opencast or deep mining or quarrying related activities within or immediately adjacent to the site boundary.
Earthworks/ Preparatory Works	Earthworks/ preparatory works in the site may be influenced by the depth and characteristics of the made ground. Further assessment based on the findings of a ground investigation are recommended.
Unexploded Ordnance (UXO)	The Zetica UXO Risk Map indicates that the site is within the **Moderate** WWII bombing density area. Zetica was further instructed to undertake further assessment of the site in the form of a Pre-Desk Study Assessment (PDSA), which recommended that a Detailed UXO Desk Study should be undertaken for the site.
Anticipated Foundations	Devensian Till strata is typically suitable for traditional spread foundations (e.g. pad/ strip), subject to confirmation of ground conditions with a suitable ground investigation. For highly loaded or settlement sensitive structures, or if very low strength soils are encountered and/ or deeper made ground was uncovered, then a more robust building foundation may be required. Given the proximity of the adjacent Rochdale Canal, foundations for building in close proximity should be designed so they do not affect the integrity of the canal.
Groundwater & Excavations	Shallow groundwater may be encountered. It is likely that excavations within Diamicton clays, if present, should remain open and groundwater controlled by sump pumping.
Flooding & Drainage	The groundwater vulnerability for the site is designated as low. The site is not at risk from flooding from rivers or sea without defences (Flood Zone 1).

Some further work is required, most notably:

- A Detailed UXO Desk Study.
- Window sampling and/ or trial pitting to investigate shallow ground conditions, undertake in situ geotechnical testing and obtain soil samples for laboratory analysis.
- Investigation to a greater depth using techniques such as cable percussive and/ or rotary boring for highly loaded structures or if deep made ground or soft superficial deposits are encountered.
- Soakaway testing is recommended if granular till deposits are encountered.
- Laboratory analysis of soil samples for geotechnical parameters, e.g., plastic/ liquid limits, undrained shear strength and compressibility characteristics.
- Laboratory analysis of soil, and if necessary, groundwater, samples for heavy metals, pH, sulphates, organic contaminants, micro-organisms, and asbestos.
- Production of a Phase 2 Geoenvironmental report.

2.0 INTRODUCTION

RWO Associates Ltd (RWO) was instructed by Latos Manchester Limited (the Client) to undertake a Preliminary Geoenvironmental Investigation of land off Bower Street, Manchester, prior to its proposed development, comprising the construction of new commercial properties and associated infrastructure.

This Preliminary Geoenvironmental Investigation is required to support planning, identify potential geotechnical and environmental issues affecting the site and, if necessary, design a suitable Phase II Ground Investigation.

General notes and limitations relevant to all geoenvironmental ground investigations are described in the aforementioned limitations statement which should be read in conjunction with this report.

The primary objectives of this Preliminary Investigation are to:

- Provide information on past and current uses of the site and surrounding area and the nature of any hazards and physical constraints.
- Identify current and likely future receptors, potential sources of contamination and likely pathways and any features of immediate concern, including those that could be introduced in the future.
- Identify any aspect of the site requiring immediate attention (e.g. hazardous substances accessible to trespassers or likely to be dispersed by wind or water).
- Provide information on the geology, mining history, geochemistry, soil, hydrogeology and hydrology of the site.
- Provide basic advice on ecological, unexploded ordnance (UXO) or archaeological considerations (although advice on such issues should always be sought from a specialist in each specific field).
- Identify potentially different sub-areas (zones) of a site, based on differing ground conditions, potential contamination, mining and past, present and future uses etc.
- Produce preliminary risk assessment and initial conceptual model for the site.
- Provide data to assist in the design of potential subsequent intrusive ground investigations and to give an early indication of possible remedial requirements.
- Provide information relevant to worker health and safety and to the protection of the environment during field investigations.
- Identify the need to involve regulatory bodies prior to intrusive investigation.

3.0 THE SITE

SITE LOCATION AND FEATURES

Information on the proposed development location is presented in the table below,

Detail	Remarks
Location	Bower Street, Manchester. M40 2AF.
National Grid Reference (NGR)	SD870002
Site Area	1.28 (Ha)
Known Services	At the time of writing this report, no utility plans have been provided. The Envirocheck report does not state any underground electricity cables.

A Site Location Plan is presented as Figure 1 in Appendix A to this report.

The site occupies an area of 1.28 hectares (3.17 acres). The semi rectangular parcel of land comprised an overgrown area of land with localised areas of hard standing tarmac/ concrete. The site appears to be bounded, at least to the north and east by tall metal palisade fencing. The site is bordered by Bower Street to the north, Ten Acres Lane to the east with terraced houses in the northeastern corner. To the south there is The Rochdale Canal and Lock #74. To the west there are commercial warehouses for the company Hub Le Bas, which is a national stockist and distributor of steel tubes.

A review of Google Earth information, indicates that the site generally falls in a westerly direction with levels varying between 78m Above Ordnance Datum (AOD) on the eastern boundary, to 73m AOD to the west.

PROPOSED DEVELOPMENT

A proposed development layout referenced SK-004 Revision P4 is presented in Appendix A to this report.

4.0 SITE HISTORY

In order to investigate the development history and previous land uses at the site and immediate surrounding land, site centred extracts from Ordnance Survey (OS) plans dating back to 1848 were examined. These plans are presented in Appendix B to this report.

The Table below provides a summary of the salient points relating to the history of the site with respect to the proposed end use. It is not the intention of this report to describe in detail all the changes that have occurred on or adjacent to the site. Significant former uses/ operations are highlighted in bold text for ease of reference.

Date	Site	Surrounding Land
1848	**Undeveloped fields.**	**Canal and Lock** bordering the south of site. **Ten Acres Lane** bordering the east. **Bower Street** bordering the north of the site. **Lancaster and York Railway** c. 340m northwest and c. 475m south. **Possible quarries** c. 250m to 500m south.
1893-1909	**Undeveloped fields**, but in southeastern corner possibly a fenced off section with **2 no. buildings.** In **1908 additional buildings** in the southeastern corner and an **entry way** to those buildings from Bower Street to the north.	**Football ground** immediately south of the canal. By 1908 it is no longer visible. **Terraced houses** adjacent to the northeastern corner. School c. 91m northwest. **Peel Dye Works and Reservoir** c. 150m southwest. **Peel Engineering Works** c. 238m south. **Brick works set in a possible quarry** c. 132m east. **Possible pit** c. 424m east (1894). **Ten Acres Cotton Mill** c. 70m northeast, **Bleach Works and Livingstone Cotton Mill** c. 330m northeast. **School and residential housing** c. 50m north. **Gas Works** c. 400m southwest. **Possible quarry** c. 145m southwest. **Quarry and reservoir** c. 337m south.
1909-1910	Unchanged.	**School** c.91m northwest moved to c. 125m west.
1922-1933	Possibly **more buildings** in the southeastern corner.	**Possible quarries** c. 250m to 500m south no longer visible, one area replaced by a recreation ground. **Peel Engineering Works** expanded south and east (1932-1933). **Peel Dye Works and Reservoir** c. 150m southwest reservoir no longer visible (1923).

1932-1933	**Recreation Ground** in northwestern area of the site.	**Engineering Works** expanded east. **Building immediately west**. **Brick works set in a possible quarry** c. 132m east has become a **sports ground**. **Bleach Works** c. 330m northeast no longer labelled.
1938	Unchanged.	No noticeable changes.
1951-1952	Buildings **no longer shown** on site.	**Quarry and reservoir** c. 337m south. Quarry has become a **sports ground**. **Bleach Works** c. 330m northeast now labelled **Galvanizing Works**. **Building immediately west** now labelled **Gas Plant works** with travelling crane.
1956	**Whole of the site** is shown as a recreation ground.	**Peel Dye Works** no longer labelled dye works. **Peel Engineering Works** c. 238m south now labelled **Park Engineering Works. Galvanising Works and Livingstone Cotton Mill** c. 330m northeast no longer labelled. **Building immediately west Gas Plant works** with travelling crane no longer labelled and crane no longer visible.
1966-1968	Unchanged.	**Park Engineering Works** c. 238m south now labelled **Works. Ten Acres Cotton Mill** c. 70m northeast, **Galvanising Works and Livingstone Cotton Mill** c. 330m northeast now only labelled mills and works.
1978	Recreation ground **no longer labelled** on site.	**Possible pit** c. 424m east (1894) now labelled disused. **More buildings** immediately west labelled works.
1981-1982	Possible overgrown areas on site in between the hard standing.	No noticeable changes. **More buildings** immediately west but now not labelled works.
1986-1991	Possible **small building** in the northwestern corner.	**Buildings** immediately west now labelled works and depot.
1990-1999	1992 small building **no longer visible** on site.	No noticeable changes.
2000	Unchanged.	**School** c.91m northwest moved to c. 125m west no longer visible/ demolished.
2006-2025	Unchanged.	**School** c.91m northwest moved to c. 125m west no longer visible/ demolished now rebuilt as offices, from 2025 named depot.

5.0 GEOLOGY, GEO HAZARDS, AND MINERAL EXTRACTION

GEOLOGY, MINING & QUARRYING

Sources of Information	BGS Online Geology of Britain viewer and BGS GeoIndex. BGS Lexicon of Named Rock Units. Mining Remediation Authority (MRA) Interactive Map Viewer. Coal Authority (Now known as the MRA) Consultant's Mining Report Ref: 51003547610001 dated 15th January 2026. Envirocheck Report, Ref. 393183700_1_1, dated 12th January 2026, enclosed within Appendix B. UK Radon Maps (www.ukradon.org)
Made Ground	No made ground is shown to be present on-site, however, given that previous buildings were present on site, it is considered that areas of made ground may be present.
Superficial Geology	Devensian Till of Diamicton, comprising a variable mixture of clay, silt, sand and gravel. (Noted on geoindex). Envirocheck notes no superficial deposits.
Solid Geology	The superficial deposits are shown to be underlain by sandstones of the Chester Formation. The Chester Formation, previously known as the Chester Pebble Beds Formation is a significant geological unit within the Sherwood Sandstone Group, prominent in the subsurface and at outcrop in the Manchester area and across the wider Cheshire Basin. The formation primarily consists of reddish-brown, cross-bedded pebbly sandstones and conglomerates, with subordinate beds of red-brown mudstone. The presence of well-rounded pebbles (mostly metaquartzite) is a key characteristic, which gives the formation its former "Pebble Beds" name.
Linear Features	Fault noted c. 140m west of the site. 2 no. intersecting faults c. 260m northeast of the site.
Mining and Quarrying	Mining: According to the MRA's Interactive Map Viewer, the site is within an area where a coal mining report should be obtained. Therefore, a MRA Consultant's Coal Mining Report has been obtained the contents of which are discussed below. The Envirocheck report states that the site is in an area which may be affected by coal mining activity and mining instability. There is one BGS recorded mineral sites within 134m northeast of the site which refers to Newton Brick Works.
CA/ MRA Consultants Mining Report	The MRA Consultant's Mining Report Ref: 51003547610001 dated 15th January 2026 for the site states. • No past mining recorded on site.

	• No probable unrecorded shallow workings. • No spine roadways recorded at shallow depth. • No mine entries recorded within 100m of the site. • No abandoned mine plans available. • No faults, fissures or breaklines recorded. • No opencast mines recorded within 500m of the site. • No CA/ MRA managed tips recorded within 500m of the site. • No site investigations within 50m of the site. • No recorded remediation sites within 50m of the site. • The CA/ MRA has not received any damage notices or claims for the site or within 50m of the site. • No current stop notices. • No mine gas or mine water treatment schemes recorded within 500m of the site. • No future underground mining recorded. • No coal mining licences recorded within 200m of the site. • No court orders or section 46 notices. • The site is in an area where a notice to withdraw support was given in 1963. • The site is not in an area where a notice has been given under section 41 of the coal industry act 1994 cancelling the entitlement to withdraw support.
Ground Stability Hazards	The ground stability hazards and associated risk listed within the site area are as follows: • Collapsible Ground – very low. • Compressible Ground – very low to no hazard. • Ground Dissolution – no hazard. • Landslides - very low. • Running Sand – very low. • Shrinking/ Swelling of Clay – very low.

BGS Boreholes	A number of historical borehole logs are shown to be held by the BGS, however, brief details of these are provided below:
	• **SJ89NE2572** (approximately 320m to the southeast of the site)
	  ○ TOPSOIL over MADE GROUND to 2.90m.
	  ○ Stiff orange grey mottled blue grey slightly sandy slightly gravelly CLAY to 15.00m.
	• **SJ89NE2508** (approximately 380m to the south of the site)
	  ○ MADE GROUND to 1.60m.
	  ○ Stiff brown sandy CLAY with sand bands to 6.50m.
	  ○ Stiff becoming very stiff with depth brown CLAY (Glacial Till) to 23.60m.
	• **SD80SE775** (approximately 620m to the northwest of the site)

	○ TOPSOIL to 0.40m ○ Medium dense to loose brown SAND to 3.70m. ○ Firm brown silty CLAY to 5.00m. ○ Firm to stiff brown slightly sandy CLAY occasional gravel to 6.00m. • **SJ89NE957** (approximately 660m to the southeast of the site) ○ MADE GROUND to 0.50m. ○ Firm to very stiff occasionally silty brown CLAY with occasional gravel, sand layers and fragments of coal to 8.50m.
Radon	The site is located within a low probability Radon Affected Area where no radon gas protective measures are required. In accordance with the Health and Safety at Work etc Act 1974 and The Management of Health and Safety at Work Regulations 1999, employers are required to undertake risk assessment for potential exposure to radon gas in the following scenarios: • all below ground workplaces in the UK; and • all workplaces located in radon Affected Areas Further information can be provided by the Health and Safety Executive (HSE).

HYDROGEOLOGY & HYDROLOGY

Hydrogeology	The site area is underlain by superficial deposits of Devensian Till of Diamicton, which are classified as a **Secondary Aquifer - Undifferentiated**. Secondary undifferentiated Aquifers are defined as a geological classification for rock layers that can hold and transmit groundwater but have variable characteristics, making it impossible to classify them specifically as Secondary A (good local water supply) or Secondary B (limited, fissure-based supply). These layers, often former "minor aquifers" or water-bearing parts of "non-aquifers," are designated as "undifferentiated" when data is insufficient to define their specific yield, indicating only minor water resource or baseflow support. The solid geology beneath site is classified as a **Principal Aquifer**. A principal aquifer is a strategically important underground rock layer with high permeability and storage, providing significant quantities of water for public supply, supporting rivers, lakes, and wetlands, and considered vital for current or future water resources.

	The groundwater vulnerability for the site is designated as **Low Vulnerability, Secondary Aquifer.**
Water Abstractions	The closest water abstraction is located c. 173m southwest of the site and relates to Cochrane & Gibbs Ltd, location: Rochdale Canal, Bower Street, Newton Heath, Manchester.
Source Protection Zones	N/R
Water Network Lines/Surface Water Features	There are 16 no. Water network lines within 250m of the site. The closest 8 no. which are within 85m of the site and relate to Rochdale Canal in the Mersey Catchment. Envirocheck states the nearest surface water feature is on site, however it gives no further details.

N/R None Recorded

LANDFILL, WASTE MANAGEMENT ACTIVITY AND INFILLED GROUND

Records regarding landfill, waste management activity, and infilled ground within 250m of the site are shown in the table below.

Record Type	No. Records Located on Site	No. Records within 250m of Site
BGS Recorded Landfill Sites	None	None
Historical Landfill Sites	None	1no. 169m northeast of site and relates to Messrs H Evers, located on land adjacent to Mitchell Street and refers to Deposited waste included inert, industrial, commercial, household and special waste and liquid sludge.
Integrated Pollution Control Registered Waste Sites	None	None
Licenced Waste Management Facilities	None	2no. 180m southwest of site and relates to Mauser – M D L Limited, materials recycling treatment facilities. And 206m southwest and relates to Mecon Packaging Ltd, materials recycling treatment facilities.
Local Authority Recorded Landfill Sites	None	None
Registered Landfill Sites	None	None
Registered Waste Transfer Sites	None	None
Registered Waste Treatment or Disposal Sites	None	1no. 134m southwest of site and relates to Drummer Boy Trading

		Co Ltd and refers to recycling drums.

INDUSTRIAL LAND USE

Records of industrial land uses within 250m of the site are shown in the table below.

Record Type	No. Records Located on Site	No. Records within 250m of Site
Contemporary Trade Directory Entries	None	8no. with the closes 2no. 30m southwest of site and relates to welding engineer's roller shutter manufacturers and 79m southwest of site and relates to Mathers Foundry Ltd die-casting equipment and services.
Current Petrol or Fuel Sites	None	None
Historic Petrol or Fuel Sites	None	None
Garage Services or Related Records	None	None
National Grid High Voltage Underground Electricity Transmission Cables	None	None
National Grid high pressure Gas Transmission Pipelines	None	None
Historic Railways	None	None
Current/ Active Railways	None	None

ENVIRONMENTAL PERMITS, INCIDENTS AND REGISTERS

The Envirocheck Report includes records of environmental permits, incidents, and registers within 250m of the site, which are summarised in the table below.

Record Type	No. Records Located on Site	No. Records within 250m of Site
Contaminated Land Register Entries & Notices	None	None
Discharge Consents	None	None
Prosecutions Relating to Controlled Waters	None	None
Enforcement and Prohibition Notices	None	None

Integrated Pollution Controls (IPCs)	None	None
Integrated Pollution Prevention Controls (IPPPCs)	None	None
Local Authority Integrated Pollution Prevention and Control	None	None
Local Authority Pollution Prevention and Control	None	4 no. with the closest 2 no. 69m and 76m southeast of the site and relates to Weir Pumps, and 79m southwest of the site and relates to Mathers Foundry Ltd.
Local Authority Pollution Prevention and Control Enforcements	None	None
Pollution Incidents to Controlled Waters	None	None
Prosecutions Relating to Authorised Processes	None	None
Registered Radioactive Substances	None	None
Substantiated Pollution Incident Register Entries	None	None
Water Industry Act Referrals	None	None
Control of Major Accident Hazard Sites (COMAH)	None	None
Explosive Sites	None	None
Notification of Installations Handling Hazardous Substances (NIHHS)	None	None
Planning Hazardous Substance Consents	None	None
Planning Hazardous Substance Enforcements	None	None

ENVIRONMENTALLY SENSITIVE SITES

The Envirocheck Report includes records of environmentally sensitive sites located within 250m of the site, which are summarised below.

Record Type	No. Records Located on Site	No. Records within 250m of Site
Ancient Woodlands	None	None
Adopted Green Belt Area	None	None
Unadopted Green Belt Area	None	None
Area of Outstanding Natural Beauty (AONB)	None	None
Designated Environmentally Sensitive Areas	None	None
Forest Parks	None	None
Local Nature Reserves (LNR)	None	None
Marine Nature Reserves (MNR)	None	None
National Nature Reserves (NNR)	None	None
National Parks (NP)	None	None
Nitrate Sensitive Zones (NSZ)	None	None
Nitrate Vulnerable Zones (NVZ)	None	None
RAMSAR Sites	None	None
Sites of Special Scientific Interest (SSSI)	None	None
Special Areas of Conservation (SAC)	None	None
Special Protection Areas (SPA)	None	None
World Heritage Sites	None	None

POTENTIAL FLOOD RISK

A detailed assessment of flood risk is outside the scope of the report. However the Envirocheck Report identifies specific information for the site and surrounding area with regards to flood risk. This information is listed below:

- Not at risk from Flooding from rivers or sea without defences (Flood Zone 1).
- Limited potential for Groundwater flooding.

ASBESTOS

There is always the possibility that asbestos fibres may also be present in any made ground beneath the site and/ or the possibility that asbestos was used historically in any buildings on site. Fly tipped materials were also noted on site, which may contain asbestos.

Prior to any works occurring on-site, it is recommended that site soils are tested for the presence of asbestos. Should any structures need to be disturbed as part of these works, then it is recommended that a demolition/ refurbishment ACM survey is undertaken.

UNEXPLODED ORDNANCE (UXO)

A UXO Risk Map has been obtained from Zetica Ltd (Zetica). This indicates that the site is in a moderate risk area, with respect to UXB.

Zetica was further instructed to undertake further assessment of the site in the form of a Pre-Desk Study Assessment (PDSA), the results showing that a detailed desk study to assess and potentially zone the Unexploded Ordnance (UXO) hazard level on the site is recommended.

A short summary of the PDSA is provided below:

- No significant military activities affecting the site have been identified.
- WW1 Bombing: potential targets within approximately 5km of the site: transport infrastructure and public utilities, chemical engineering and metal works, military establishments. No records have been found indicating that the site has been bombed.
- Site is recorded in Manchester County Borough, which officially recorded 737no. high explosive bombs, with a density of 27.0 bombs per 405ha. Records available indicate that several high explosive bombs fell in close proximity to the site.

The Risk Map and PDSA and is presented in Appendix C.

ECOLOGY AND INVASIVE/TOXIC SPECIES

A detailed ecological assessment falls outside of the scope of this report, and therefore if detailed ecological advice is required, a specialist ecological consultant should be contacted for further advice.

During the walkover survey no toxic invasive plant species were observed.

ARCHAEOLOGY AND OTHER DESIGNATIONS

An archaeological assessment falls outside of the scope of this report and therefore if detailed archaeological advice is required, a suitably qualified expert should be contacted for further advice.

6.0 PREVIOUS INVESTIGATIONS

RWO have not been made aware of any previous investigations on or within the near vicinity of the site.

7.0 SITE WALKOVER

A site walk over was undertaken on 26th January 2026. The site is located off Bower Street. There is a locked entry gate with concrete bollards placed behind it. There is evidence of tipping behind these bollards as debris comprising brick and concrete is evident. The site occupies an area of 1.28 hectares (3.17 acres). It is a semi rectangular parcel of land comprised an overgrown area boasting semi-mature and mature trees with localised areas of tarmac/ concrete surfaced hard standing, which have been partially overgrown with weeds and mosses, evidence of roadside curbs can be seen.

The site appears to be bounded at least to the north and east by tall metal palisade fencing. The site is bordered by Bower Street to the north, Ten Acres Lane to the east with terraced houses outwith the site but adjacent to the site's northeastern corner. To the south there is The Rochdale Canal and Lock #74. To the west there is a small brick wall with commercial warehouses beyond. When walking on site there is evidence of previous small fires and tipping. The site is generally flat and level.

The Site Features Plan which includes photographs taken during the site walkover is presented as Figure 2 in Appendix A.

8.0 PRELIMINARY CONTAMINATION RISK ASSESSMENT

The following paragraphs outline a Preliminary Risk Assessment (PRA) for the site, based on the above desk study information.

Figure 3, attached in Appendix A to this report, presents the Preliminary Conceptual Model (PCM) which considers the Source-Pathway-Receptor linkages present alongside the probability, consequence and risk level as defined RWO's Risk Assessment and Conceptual Site Model processes is presented in Appendix D, to establish if there is the potential for unacceptable risk associated with ground contamination or hazardous ground gas emissions.

The PCM considers whether a plausible pollution linkage is potentially present and provides a preliminary qualitative assessment of risk based on the information currently available. Where a possible linkage is identified, it does not necessarily mean that a significant risk exists but indicates that further information is required through appropriate site investigation to test and refine the conceptual site model.

Set out below are all identified potential contamination sources, pathways and receptors associated for the site in the context of the proposed commercial end use.

Potential Sources

Potential sources comprise;

- Historic made ground associated with previous site usage (buildings in the east and recreational ground) contaminant such as heavy metals, PAHs, sulphates, asbestos.
- Off-site sources associated with nearby mills, dye works and quarries (heavy metals, PAHs, BTEX, MTBE).
- Nearby former backfilled reservoir (hazardous ground gas).
- Contamination aggressive to building materials in natural and made ground soils.

Potential Pathways:

The following pathways have been considered for the potential construction and operational stages of the proposed development:

- Direct Ingestion
- Dermal Contact
- Inhalation of dust/ volatiles/ gas
- Vertical/ lateral migration of leachable contaminants and ground gas.
- Plant uptake/ consumption
- Direct Contact

Potential Receptors:

The following receptors have been considered for the construction and operational stages of the proposed development:

- End Users – Workers/ Public
- Construction Workers
- Adjacent Users
- Controlled Waters – Secondary Undifferentiated Aquifer (superficial deposits)/ Principal Aquifer (bedrock)
- Adjacent Canal
- Vegetation
- Buildings

9.0 CONCLUSIONS AND RECOMMENDATIONS

SUMMARY

The site consists of a semi rectangular parcel of land comprising an overgrown area of land with localised zones of tarmac/ concrete surfaced hard standing.

The site is underlain by superficial deposits of Devensian Till of Diamicton, which overly bedrock geology of sandstones of the Chester Formation.

The overall risk to current/ future site users and construction workers is moderate to Very Low due to the limited sources and pathways. The risk to groundwater is thought to be Low to Very Low due to the limited potential contamination sources and absence of plausible pathways.

FLOODING

The site is not at risk from flooding. For the purpose of this investigation, however a site-specific flood risk assessment (FRA) is likely to be a planning requirement as the site is larger than 1 Ha in area.

MINING & QUARRYING

Based on the geological setting of the site, information provided by the Mining Remediation Authority (MRA) Interactive Viewer and CA/ MRA Consultant's Report, it is considered that the site is not at risk from historic coal mining activities.

OS historical mapping and the Envirocheck report has not uncovered evidence of obvious opencast or deep mining or quarrying related activities within or immediately adjacent to the site boundary.

CONTAMINATION

On site sources include previous buildings in the south east, and access routes and previous site uses as a recreation ground. In addition, evidence of tipping (possibly demolition type materials) was noted during the site walkover. Offsite sources such as nearby mills, dye works and quarries, nearby former reservoir to the west.

Potential contaminants include heavy metals, PAHs, TPH compounds, asbestos.

Possible contaminant Pathways include direct ingestion, dermal contact, inhalation of dust/ volatiles/ gas, vertical/ lateral migration of leachable contaminants and ground gas, plant uptake and consumption and direct contact.

Receptors include end users, construction workers, adjacent users, controlled waters, vegetation and buildings.

It is recommended that in advance of any future development of the site, or other activities which could disturb soils and increase the potential for a contaminant linkage, an intrusive ground investigation is undertaken to assess possible presence of soil and groundwater contamination at the site and how, if present, it could affect receptors.

FOUNDATIONS

The site does not show mapped evidence from the BGS that there are artificial deposits underlying the site. However, in light of the site's history, it is likely that some limited Made Ground exists.

The Envirocheck Report concludes that ground stability hazards are very low to no hazard.

It is likely the shallow Devensian Till deposits would be suitable for tradition foundations for typical low rise commercial properties.

For highly loaded or settlement sensitive structures, or if very low strength soils are encountered and/ or deeper made ground was uncovered, then a more robust building foundation may be required. It is therefore recommended that an intrusive ground investigation is undertaken to better understand the soils beneath the site.

OTHER GEOTECHNICAL CONSIDERATIONS

There is an inferred geological fault identified within 250m of the site boundary, which is not considered significant.

Given the proximity of the adjacent Rochdale Canal, foundations for buildings close by should be designed so they do not affect the integrity of the canal.

UTILITIES

There are no high-pressure gas distribution underground pipelines or high voltage electric distribution cables within 250m of the site.

HAZARDOUS GROUND GASES

The superficial geology recorded by the BGS does not typically indicate alluvium or organic deposits (e.g. peat) with the potential of creating hazardous ground gases within the site, or in proximity to it.

The BGS information also shows that no artificial deposits are said to be underlying the site. However, given the history of the site there is likely to be some Made Ground of unknown, which may present a source of ground gas.

There was also a reservoir c.150m southwest of the site recorded on maps between 1893 and 1923. It appears the reservoir was subsequently filled in. As such the former reservoir may be a source of hazardous ground gas emissions.

The site does not lie within an area in which specific precautions to protect against radon gas are required.

ECOLOGY AND INVASIVE SPECIES

An ecological survey is outside the scope of work for this Preliminary Appraisal and it is recommended that an appropriately qualified specialist is contacted for further advice.

ARCHAEOLOGY

An archaeological survey is outside the scope of work for this Preliminary Appraisal and it is recommended that an appropriately qualified specialist is contacted for further advice.

SOAKAWAYS

The site is underlain by superficial deposits of Devensian Till of Diamicton Which if cohesive in nature are not inherently suitable for the installation of soakaways. However, should granular till deposits be encountered, these could be suitable. Soakaway testing is therefore recommended.

UNEXPLODED ORDNANCE

The Zetica UXO Risk Map indicates that the site is within the **Moderate** WWII bombing density area.

Zetica was further instructed to undertake further assessment of the site in the form of a Pre-Desk Study Assessment (PDSA), which recommended that a Detailed UXO Desk Study should be undertaken for the site.

RECOMMENDED OUTLINE SCOPE OF INTRUSIVE GROUND INVESTIGATION

The finalised scope of an intrusive ground investigation should be determined following confirmation of the nature of the development works. However, at this stage, it is considered likely that the following would be required:

- UXO Detailed Desk Study.
- Soakaways within granular deposits, if encountered.
- Window sampling and/ or trial pitting to investigate shallow ground conditions, undertake in situ geotechnical testing and obtain soil samples for laboratory analysis.
- Investigation to a greater depth using techniques such as cable percussive and/or rotary boring for highly loaded structures or if deep made ground or soft superficial deposits are encountered.
- Laboratory analysis of soil samples for geotechnical parameters, e.g., plastic/liquid limits, undrained shear strength and compressibility characteristics.
- Laboratory analysis of soil, and if necessary, groundwater and surface water, samples for heavy metals, pH, sulphates, organic contaminants, micro-organisms, and asbestos.
- Production of a Phase 2 Geoenvironmental report.

KEY

SOURCES

1. Historic made ground associated with previous site usage
2. Off site nearby mills, dye works and quarries
3. Nearby historic backfilled reservoir
4. Contamination aggressive to building materials

PATHWAYS

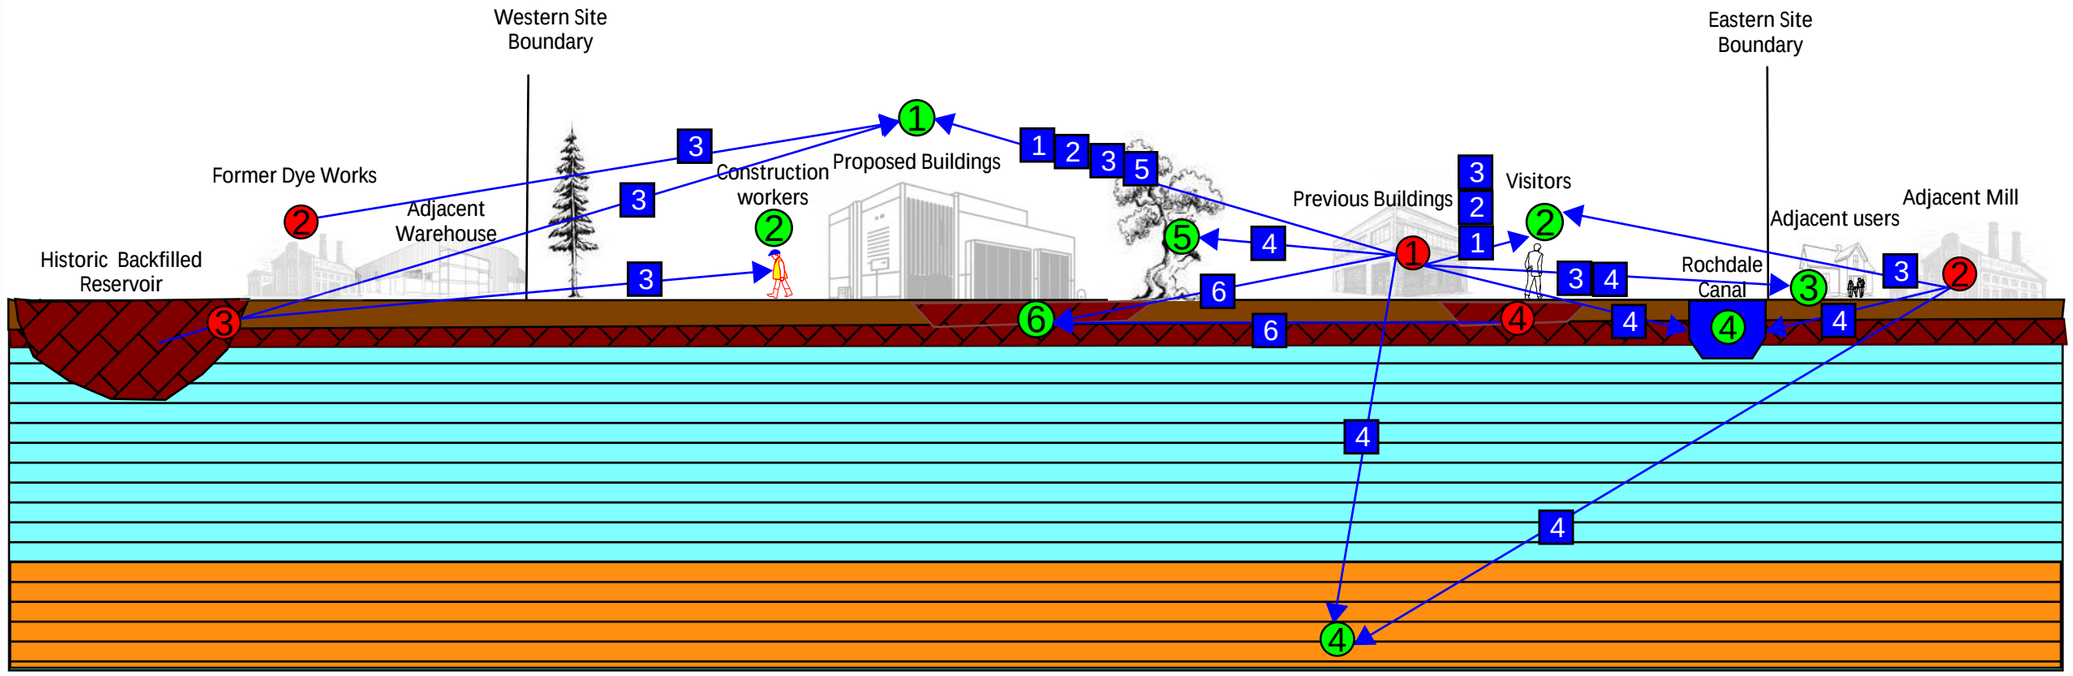

1. Direct ingestion
2. Dermal contact
3. Inhalation of dust/volatiles/gas
4. Vertical/lateral migration of leachable contaminants
5. Plant uptake / consumption
6. Direct contact

RECEPTORS

1. End users - site workers and visitors
2. Construction workers
3. Adjacent users
4. Controlled waters - Principal Bedrock Aquifer and Canal
5. Vegetation
6. Buried structures

GEOLOGY

- Topsoil
- Made Ground
- Till Devensian
- Chester Formation

Source(s)	Pathway(s)	Receptor(s)	Probability	Consequence	Risk	Comments
1, 2 Historic made ground:associated with previous site usage Inorganics, natural organics (Heavy Metals, PAHs, TPHs), asbestos	1	1	Low	Moderate	Low	Made ground associated around former buildings. Off site sources are historic and distant.
	2	2	Moderate	Moderate	Moderate	Use of PPE/RPE will lower risk further.
	3	3	Low	Mild	Very Low	Suppression of soils dust during construction will lower risk further.
	4	4	Low	Moderate	Low	Migration limited due to distance from site and limited and veneer of low permeability cohesive soils.
	5	5	Low	Mild	Low	Vegetation may be adversely affected by phototoxic contaminants although minimal sources (localised made ground) anticipated. GI to confirm.
	6	6	Low	Moderate	Low	Made ground associated around former buildings.
3 Nearby reservoir (ground gas)	3	1	Low	Moderate	Low	Gas monitoring recommended to confirm risk level.
	3	2	Low	Moderate	Low	Higher risk in excavations. Use of PPE/RPE will lower the risk.
4 Contaminants aggressive to building materials	6	6	Low	Moderate	Low	No deep Made Ground expected.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Russian Military Mapping Legends

1:5,000 and 1:10,000 mapping

a. Not drawn to scale b. Drawn to scale

- Government and Administrative Buildings
- Military and Industrial Buildings
- Military and Communication Areas
- Subway Entrance
- Fireproof Building
- Prominent Fireproof Building
- Non-fireproof Building
- Non-fireproof Building (non-dwelling)
- Factory, mill, and flour mill, with chimneys
- Factory, mill, and flour mill, without chimneys
- Power Station, drawn to scale
- Hydroelectric Power Station
- Radio Station, drawn to scale
- Telephone Station, drawn to scale
- Abandoned Open-pit Mine or Quarry
- Open-pit Salt Mine
- Pit
- Oil Deposit or Well
- Oil Seepage
- Tailings Pile
- Fuel Storage Tanks
- Natural Gas Tank
- Bench Mark
- Drill Hole
- Burial Mound
- Triangulation Point on Burial Mound
- Single-track Railroad
- Double-track Railroad and Station Building
- Coniferous Forest
- Deciduous Forest
- Mixed Forest
- Lawns
- Citrus Orchard
- Wet Ground
- Scattered Vegetation

243,8 — Values for prominent elevations

186.0 — Numbers for spot elevations, depth soundings, contour lines, etc.

0,2 — Velocity of the current, width of river bed, depth of river

Fractional terms: length and capacity of bridges; depth of fords and condition of the river bottom; height of forest and the diameter of trees

Russian Alphabet (For reference and phonetic interpretation of map text)

А а (A)	З з (Z)	П п (P)	Ч ч (CH)

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

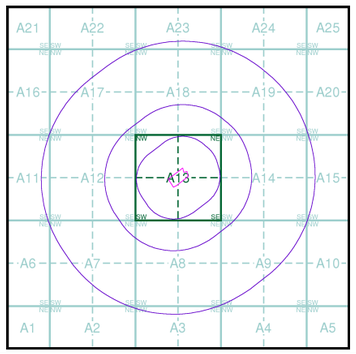

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan

Published 1956

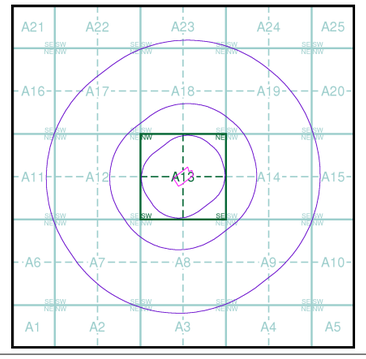

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

LANDMARK INFORMATION GROUP®

Manchester

Published 1975

Source map scale - 1:25,000

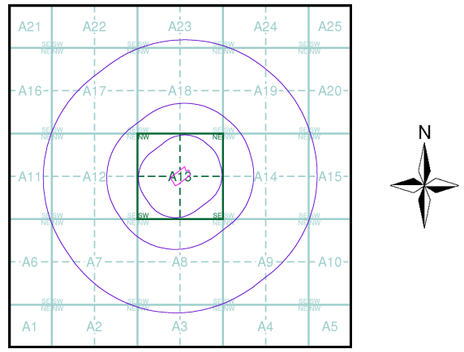

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.
