Comment from [REDACTED]

I am strongly positive and supportive of this very thoughtful planning application from Ryebank Fields Community for the future use of Ryebank Fields. This area has benefited the local community and those further afield for many years providing an accessible biodiverse, naturally rewilded green space in the heart of Manchester. It has been protected and enhanced by a conscientious local community group for the benefit of all.

It was covenanted many years ago by Manchester City Council to the then Manchester Polytechnic for the use of recreational activities. The Polytechnic became Manchester Metropolitan University and privatized. Planning application 142223/FO/2025 for the building of 120 dwellings on the site would no doubt gratuitously gift MMU a large sum

of money for the sale of land designated for recreational use , previously deemed unsuitable for housing on 2 occasions. UK does need housing but as much of planning application 142223/FO/2025 has been redacted or made unavailable its difficult to know if this the sort of social housing that is needed or in fact high end housing unaffordable to most.

A housing development of this sort will of course do nothing to alleviate our most pressing need that of addressing climate change . Ryebank Fields Community application points out that parts of the area have a risk of flooding. A housing development on the site would only increase that risk by tarmac and concreting over large areas and preventing soil drainage. Further it would endanger the established surrounding communities to an increased risk of flooding. I see no paper addressing this risk in the 142223/FO/2025 application.

I fully support the alternative plan from Ryebank Fields Community's to keep Ryebank Fields as a community resource.

We are at a turning point in history where we can start making sensible decisions for our futures or continue to contribute to short-term initiatives for profit.
