NOTES

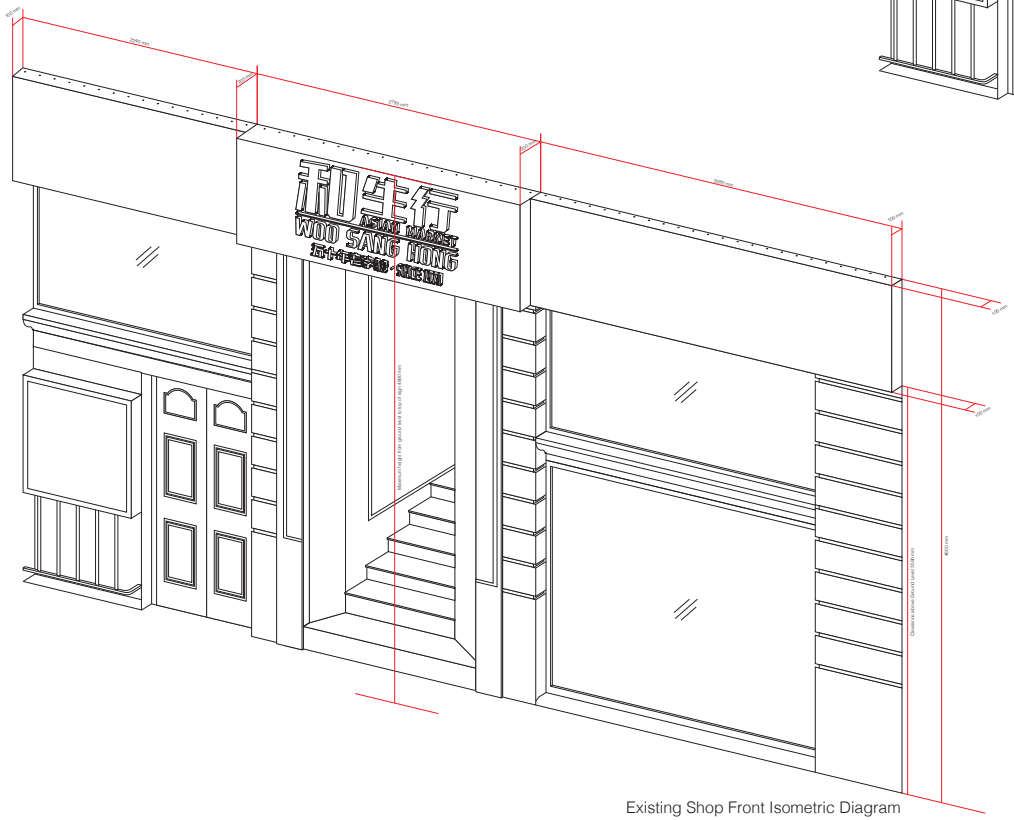

The Contractor is to check all dimensions and siteconditions before commencing.
Do not scale from this drawing.

Fixing Note
The proposed canopy feature is manufactured in 3 modular sections (Left, Center, Right) for efficient and non-destructive site installation. Following the removal of the previous aluminum signage face, the new sections will be secured directly onto the top and bottom edge flanges of the existing sub-frame using stainless steel fixings. This method utilizes existing fixing zones and requires zero drilling, chasing, or alteration to the historic masonry facade or stone pilasters.

Preservation Note
Utilises existing fixings and upper fascia zone occupied by the previous signage. All original stone pilasters, decorative mouldings, and structural reveals remain 100% untouched and preserved behind the new sign.
